You make some good points on education vs training, and basically I'm in agreement with you. However, I partially disagree with you regarding your application of these concepts to the amateur radio service. Specifically, in the ARS both education and training are important, at least according to 97.1.

If I understand you correctly, you'd define education (more or less) as knowledge of the various concepts pertaining to a subject, such as what one would learn in a classroom. Training, on the other hand, would be knowledge gained essentially emperically; through experience and or practice. I don't completely agree with this definition of training, although it certainly is valid in the context that you can teach a bird to say words and phrases, although he'd have no idea what he was saying. As far as the ARS is concerned, training is better than defined as acquisition of skills through application of one's education.

I think of it much like learning to play a musical instrument. You could learn everything there is to know about the instrument through studying books and listening to lectures, but unless you apply this knowledge through training, it's unlikely that you'd be "play" the instrument. Conversely, one could learn a few songs by ear, through training alone. But without education, one wouldn't be able to play from written music. So, true expertise would neither be gained by education without training nor training without education.

So, getting back to how all this applies to 97.1, particular subparts b,c,and d, these could not be fulfilled through education or training alone, but require a level of expertise that can be gained only through a combination of the two.

>made a fool of than risk letting someone die.

Roger. I guess the point I wanted to make is that on a repeater, it's
best to give your callsign, and ask if there is a control operator or
other station that can handle emergency traffic. As repeater director for
a large club, and a member of the local RACES and ARES group, that is the
advice we give to folks. Shouting mayday may or may not be as effective a
means of communicating the point. The gentleman remarked that he had
trouble getting a response to his mayday call on the Las Vegas repeaters,
and I was trying to provide a possible explanation for that - other than
"hams don't respond to emergency calls".

Thanks and 73,

Jim AC6XG

According to the most recent Radio Shack catalog, the HTX-202 has a tone encoder, as well as a decoder, however, i do not know how to operate it on that radio, on my old Icom 02at, you push the function key, (next to PTT) and a certain key combo on the keypad, I'v been told the htx-202 and icom's 02at are quite similar in operation though.

So then you're saying that he's listening to CW solely for the
purpose of perhaps copying an SOS. Yes, I suppose that could happen.
There's also a probability that all of the molecules of air will gather
into one corner of the radio room.

>> Or you could just tell 'em to send really really slow so you can
>> look it up on the Morse code chart. :-)

>This is not unreasonable for someone who doesn't know Morse code.

And how would he convey that message to them? Maybe everyone should know
how to send SOS _and_ QRS?

>It certainly would be better than no communication. Perhaps an
>easy to learn procedure for such should be established in the
>event that such an infinitesimally small probability might happen.

Absolutely. And maybe they could also make the code test part of the
Civil Service exam so that the mailman could stop by to copy the message
for the amateur radio operator. ;-)

Source record: 151213

I am having a problem and would like some help with how to go about fixing it. I have a 6 month old Yaesu FT-840 and on Saturday I began to get poor RST's on CW on 15 and 40 meters. I was in a mobile at rest setup and my antennas were hamstick monobanders on my mag mount.

The signal reports I got were 585, no tone, a buzz and the operator not being able to center on my freq. I was on 10 meters voice and had no problems on Saturday, but on a local net on Sunday, I was told that I had some distortion at the start of the transmission. During the TX, the distortion went away but the audio level dropped.

Later sunday I was talking with someone from CA and the distortion went away when I lowered the power from 100 watts to about 50 watts. Must be some kind of RFI in the setup, but it only recently began. I have been running the same config since August.

Any help in pointing me to some resources will be appreciated. I hope this can be fixed without sending it away for repairs.

From: croberts@okra.deltast.edu
Message-ID: <79mura$2jh$1@nnrp1.dejanews.com>
Source record: 151217

Dear Sirs,

I am currently a freshman at Delta State University. In my speech communications class the other day, my professor made an interesting comment - that many of us, before we retire, will hold jobs that do not exist today. This, he said, was the importance of a college education. So, what does this have to do with amateur radio ? I'll explain.

Many people have made comments similar to "Well, I'm not going to operate ____ (CW, RTTY, packet, satellite, &c.) so why should I have to learn ______ ?" Because the goal of the amateur service is to create _educated_communicators_, not _trained_operators_. If a person is trained to do a specific job, and that job is no longer needed, where does he stand ? However, an educated person is able to pool their knowledge and adapt to circumstances and continue. I hold a Technician class license, and have never even seen separate transmitter/receivers, but I know where a TR switch should be placed. I use a dual-band mobile as a base station and don't have an SWR meter attached, but I know how to read one, and should I purchase one, I already have the knowledge to use it correctly. The point (just in case you missed it) is that as _educated_communicators_ we should be learned in all aspects of the radio service, from CW to digital satellite operations, so that when the time arrives, we can adapt and prevail. As _trained_operators_, we're doomed.

Just my $0.02

3229. RX-320 Free Beta Software

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-09 00:00:00 UTC
From: mktg@ix.netcom.com
Message-ID: <36c8b211.10619408@nntp.ix.netcom.com>
Source record: 150971

February 9, 1999

Dear RX-320 User,

Last fall I acquired one of the new Ten-Tec RX-320
receivers. It is really a delight to use and listen
to.

After a few weeks, it occurred to me that the supplied
software did not fully use all the functionality of the
radio. I wondered what else could be done.

So, I wrote my own software. It is not as pretty as Ten-Tec's
but it does have some additional features:

- Squelch (adjustable)
- Scanning of lists (files) with adjustable delay
- Tuning in a variety of steps from 1 Hz to 1 Mhz
- 34 selectivity settings
- Runs under DOS or Windows - even works on a 80386
computer using DOS

The program has only been run by me (on several computers),
so that really makes it a Beta version.

I would be happy to supply free of charge this Beta version
to anyone interested who has an RX-320. The software will not
function without an RX-320.

The program is supplied along with several other files in
a single zip file. Installation and removal are simple, as
the program does not affect any system settings either in
DOS or windows.

The program is easy to use - just press various keys to engage
the different functions.

Brief installation, removal, and operating instructions are
included.

If there is enough interest, the Beta version may advance into
a final version. In any event, I am not aware of any major
bugs in the program.

Send your request to my e-mail at mktg@ix.netcom.com and I will
send you the zip file by return e-mail.

Regards,

David

if you're lucky that is. It is far more likely that you'll be permanently disabled to some degree
and stuck with chronic pain. If you follow your prescription from your family doctor
it is almost guaranteed to be treated wrong. You really need to find a specialist in repetitive
motion injuries.

I was injured in '94. It took six doctors before I could find one that could spell thoracic outlet
syndrome right two out of three times. Now, almost all computer use is via speech recognition
amateur radio is basically off-limits because it hurts to hold a microphone or use a key.
At the worst, I couldn't even hold a spoon to feed myself. Now, I'm doing okay. I just can't
use my hands for many things.

Sure, a relatively minor glitch in Canada shut down the East Coast
to the extent there was a baby boom nine months later.

Thanks,
Who determines which frequency is for input and which is for relay, If a radio was within range of the repeater and the transmitter, which would it here...always the repeater?

Will your receiver receive on the same freq or will it step down (or up) to the repeater's transmit freq.

>The ARRL handbook has more on this and other subjects. I recommend it!

Where can I find this?

First of all let me correct my idotic self. There were a few words left here, and dummy me did not Read it Be 4 I clicked the send button, Hey nobody's perft. here is how it should read.

> Denpending on well I trust his judgment, I wouldn't walk around a city without
> some along, in fact the more the better; as long as they are trusted friends.

Meaning that if thought that his judgement was good I would let him/her go out, yes.If their Judgment was good, I would not have to worry about if they went out by their selfs or not, I mean in a small town that I am it is safe to walk the streets alone. In a Big City I would probly not, There fore in Trusting them, I would Know that they would know what to do and not what to do.

Besides, the internet and a Big city is different. In the City People could physical hurt you. Here they just might say the wrongs things. There again I would go back to how well I trusted them.

If that makes any Cents ;)

Not sure if spreading rumors about them being bankrupt is what I would call criticism. I'm quite sure if Yaesu were public and you owned stock you would be whistling a different tune. I suppose if you hadn't posted for a few weeks we could say that mf_luder must be bankrupt since he's not on line anymore? Right...

One thing is like everyone else says, there has to be somone there, I have been in situations befor and been able to get help, ussally if somone is around they will help. We have a repeater, actully two here that has 911 on it all you have to due is key your transmitter, and dail 911, or 911* depend on the repeater. It also doesn't have a time out on 911 calls, although eventully it beeps after you stay on for long than 3 min. why I am not sure, it almost like you are talking to another ham on it or something.

If they use AOL for any of their services it's definitely hosed. I've
been trying to use IM and check out some web pages on AOL and nothing.
Even a ping does nothing.

Tony

3251. Free: Good propagation, great experiences - ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-09 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <79r26a$m5k$1@w3eax.umd.edu>
Source record: 150993

Free!

Good propagation, great experiences

Have you ever been driving home from work and talked to someone clear across the continent? How about across an ocean? How about halfway around the globe???

How about two CW operators running less power, combined, than a nightlight, while driving down the road???

I'm not saying it's easy...just that it's possible, with...

WORK and PERSISTENCE

...to have some serious fun bouncing stuff off the ionosphere.

This past weekend, if you missed it, was the Arizona ScQRPions "Freeze Your Buns Off" (FYBO) winter field day. My girlfriend had to do a school project, so she shuffled me off to do errands and said that she wouldn't mind if I operated for a while...

In just about 4 hours of operating...with Screwdriver 8' antenna...

36 contacts in 19 states, all of which made with nothing more than 3 watts on my end and between 950 mW and 5w on the other end including Alaska and Hawaii, plus Connecticut and a few other east coast states.

I saw today a report of a fellow operator who has made contact with 26 states using a SUM totoal of 1.326 watts (some were as low as 3 milliwatts).

Today, I called CQ on 30 meters (mobile, of course) and was called by someone in New Brunswick using a dipole.

What does this mean?

1) Your power knob can be set to less than 100w and your radio will still work

2) If you're not operating, you're missing out on some pretty good, cheap fun.

When was the last time you challenged yourself to try something difficult? The bands are out there...waiting for you...you'll never know what you can do until you try...

there are digital video recorders..

supposed to even be ones that will play analog vhs tape but record
digitally..

cassettes are the same size tho..

yeah, that sounds familiar.

people ask me "how did you get the exams advertised on radio?"

when i tell them that i just sent the information to the media, they don't believe me.

I think i'll start telling 'em that it was paid for with AARP dues (since so many hams can't get ARRL and AARP straight these days...)

You think they'll be more satisfied with the answer?

Well, that's one way to look at it.... Believe me, I take no position
on Stumpjumper lineage or the controversial post itself. It just seems
to me that there are better ways of reacting to off-color humor than to
become nit-picky about obvious details. That's little better than
pointing out typographical errors or mispellings as a way of responding
to a posting. It makes one seem petty.

And yes, I'm on 75m a lot during the evenings --- but only in the
3,900-3,800 kHz DX window.

> Wake up.

As I understand it, of course I may be wrong, the Internet came into
being
c.1967, but not popularized until Clinton/Gore came along. The key word
is
popularized. Did Reagan, Carter, Bush ever mention it to us? Can't
recall.
Re taxes, Which President made this famous quote: "Read my lips, no new
taxes." Another lying Democrat, George Bush.
Poor Ronald Reagan, truly he probably "...didn't remember." I know the
real
estate dealer that tried to sell him back his own home, <G>, Funny thing
how
Oliver North, Annapolis graduate, keen mind, couldn't remember details
of the
Iran-Contra Affair...gosh, don't these national leaders take notes?!?!
How about this Democratic President: "I have a secret plan to end the
war
[Vietnam]." "I am not a crook." Wasn't called *Trickie Dick* for
nothing.
I still remember all those staunch patriotic, America is #1 Republicans
during
the Vietnam War who had a calling from Heaven to become ministers, ala
Stockman (a Reagan adviser I believe). Funny how they all had a change
of heart
when peace was declared.

<SNIP> Clinton is only responsible for taxing the internet.

I must have fallen asleep in my Civics/U.S. History class in college.
Please forgive my ignorance. I didn't know only Presidents from the
Democratic Party imposed taxes on us. I'm so dumb, next time I'll have
to
vote for Reublicans who only believe in "revenue enhancement." You know,
Ronald Reagan was right, why have national parks and forests, you've
seen
one tree, you've seen them all. You should've seen his ranch in Santa
Barbara County, California--all those plastic trees on his acreage.

Rambo,
I am sure that you have been told this several times by this group. But you are probably the biggest penis wrinkle ever to hit the groups. I'm sure you might be a nice man in your real life and you just like to stir it up on the groups. That's okay, we all like to do that to some extent, and it helps keep the opinions flowing, but you spew forth so much ignorance that I feel sorry for you and those who blindly follow you and laugh at your comments at the local Denny's coffee sessions.

Al Hussein was a good friend and a relative of mine through marriage. Many hours we would sit up at the palace a talk of everything from Ham radio to sports. He would drive across town almost every day just to tuck my nieces into bed and to have a laugh with the family. He liked Americans, western culture and was far more educated about American history than most Americans I know.

Just because a man does what he feels is right for his own country and people doesn't make him an enemy, just a man of values.

I'm sure you will have some weak and feeble comment for me, so I will say this in advance: BLOW IT OUT YOUR ASS! and God Bless!

There is no new version of SuperMorse. 4.16 was the last version. That venerable old program is slowly fading into obscurity, which is a shame because it sure helped a log of hams get their speed up. I think NuMorse is pretty much stepping into SuperMorse's position as best all around code tutor software. I still have SM at my site, but I got NuMorse too, now. My new URL is http://www.geocities.com/~robinsonab5vh/ . I still got stuff at the old sites but the new one is now the main one.

Switch? You mean you can't just listen to it and read it? What manual
function do you find yourself involved in during the receiving portion
of a digital QSO? If the fellow you are in QSO with doesn't hear from
you, he probably believes you've gone off to monitor 7.122 for the next
several hours.

Jeez. Their US web site goes down, and they're proclaimed to be bankrupt?
Where did you get your information? I'm no big fan of Yaesu, but I doubt
that they went bankrupt overnight.

The main web site in Japan is alive and well.

Hello Huggy,

You have to understand than many people love "Doom and Gloom". Before Y2K, it was the threat of Nuclear War. Bomb Shelter sales boomed in the 50's. Before that it was Nostradamous and the 3 Anti-Christs. Before that, it was the book of Revelation.

The Ham bands have been loaded with these nay-sayers for as many years as Ive been listening. These people still have cases of Campbells Chicken Soup in their basement that expired in 1959.....But they are prepared for the worst! They actually believe that the worlds communications responsibilities lies within their realm.....I was listening to a guy one night on 20 meters thats all stocked up on semi-automatics for his family, for when the urban revolution take place.

Actually its more pathetic than anything. If people used their energy for positive things, there wouldn't be any impending catastrophes.

Welcome, Bob.
A repeater is an unattended radio station in an "advantaged" location, that is one which affords it a good high antenna for coverage of a broad area. Repeaters are most usual on VHF and UHF FM bands, though they are applicable to other uses. The repeater can communicate with all stations in its coverage area because it has good equipment (much more capable than our hand-held 'talkies') and a great antenna. The key to its operation is the capability to simultaneously transmit and receive. The repeater hears any signal on its input frequency (and in the coverage area) and immediately REPEATS it on its transmit frequency, so we can all hear it on our hand-held radios, even tho we may not be able to hear the signal directly from the originator. Now, all the users on frequency and in the area can communicate with each other. The ARRL handbook has more on this and other subjects. I recommend it!

Sure looked like they were in full operation when I was there yesterday.

Talked to the national amateur sales guy and lot 3 of the VX-5's are already sold out and they'r waiting for lot 4 to arrive by plane. Can't keep them in stock. Apparently they'v fixed the bugs w/ the earlier ones. That means I get mine next week. :-)

As for the aligation of closing the doors...pure lies by the anti-yaesuest out there. If anyone was going to do it, it would be Deadwood, oh, sorry I mean Kenwood.

Hello Huggy,
I read your thoughts with real interest inasmuch as I felt much the same way as you until I downloaded a Y2K Analyzer/Fixer for PC Hardware and Software and checked out my PC. As a matter of fact, I had thought my PC Hardware and Software WERE Y2K compliant.
After running the FREE Analyzer, I found that I had both bios and system files which were non-compliant. (35 instances in 25 files)
This program is the only one I could find on the market that would not only analyze; but also FIX, for a relatively low cost, BOTH PC Hardware and Software.
The end result is that:
1) I have purchased the disk.
2) I now have the right to sell the fix in both Canada and the U.S., and will shortly be selling it into both Australia and New Zealand.

If you would like to check out, FOR FREE, your PC for compliance or non-compliance, I'd invite you to go to my Website at: http://home.istar.ca and click on the Y2K button. Then, on the linked page, click Products. That will take you to a link to the Y2K Analyzer/Fix. Click on that link and there you will be able to download the program.
Hope you find it helpful.
Dave Nightingale

> >same law firm to file their FCC NPRM comments.
> >
> >Does this mean the
> >interests of ICOM, an organization that wants to sell more radios is the
> >same as the ARRL?

Of course not. In this case the law firms are doing nothing more than helping their clients present their own individual opinions in a clear, concise way. The firm may have several different clients filing comments in the same matter, and the client's opinions may or may not agree with each other. It makes no difference.

It's not too unusual to see both organizations use the same law firm. This is a matter of specialty law, and there aren't that many firms that specialize in communications. I know that Yaesu also used the same firm a year or two ago when some questions arose over the rules compliance of one of their HTs.

There would only be a question about the same firm representing both clients if the clients were litigating against each other. So, if the ARRL ever sues Icom America, you would see each organization using a different law firm for representation.

You're also somehow implying that the goals of the ARRL and the ham radio industry are different. In fact, they're the same. As Gary Coffman pointed out a few posts back, the ARRL and the ham radio industry (in this case, Icom America) are really on the same side in this matter. In fact, I'll go as far as to say that 95% of the folks who filed comments are on the same side. Most of those who commented genuinely want to see changes made that will help the amateur radio service grow and become a vibrant, active service again. There just isn't any agreement between the different factions on what those changes should be.

Actually, the President doesn't impose taxes. Congress does.

Not only does Clinton have nothing to do with this thread but these
cross posts are out of context as well.

If you are waiting for either Republicans or Democrats to save the
world, you might as well jump off a cliff today. Since most people
can't help but to look out for their own interests, one can only
expect politics to become an arena for self-serving corruption. Those
who have not taken this road as they walk amongst the devils deserve
all the more praise for their strong character and firm principles.

Wildcat's right about "Y2K."
Around here we're calling it "Lie-2K."

Picture this: the computer automation for your water
system goes belly-up. So your local Public Service Commission
people say, "Oh, it cost too much for you water people
to make the water flow? Gosh... I guess we'll just have
to let the voters die of thirst. I better go home
to be with my family as we die."

The electric company, too. "Well, since the controllers went
down, we're just going to leave New York dark and roast
marshmallows as the ghetto folks burn the city down..."

"Uh-oh! It's new year's eve at NORAD and all the missles
are flying off on their own! Guess we'll just sit here and
watch the fireworks."

Oh please....
People have such short memories. Dust from Halley's comet was
going to kill us, so people made money selling comet insurance.
Jesus was going to come and end the world about 800 times
in the last century and every time, some clown made money.
The stock market tanked in 1984 and sharpies are *still* making
money selling "sky is falling" books and videos to the gullible.

If the power goes off, they'll fix it. Quickly.
People still know how to jumper around controllers.
They know how to pipe water manually.
Trucks don't need computers to deliver produce.

FLASH!
Pencils and Paper still WORK!
We did just fine with them up to the 80s.

Remember how it was claimed that the "old mainframes"
that handle unemployment were going to crook last year
because they figure a year ahead? I haven't heard of
one person who didn't get a check-- have you?

One person told me-- with a straight face--
that the (automatic) doors on the supermarket won't open
to let you in! "You can't PUSH the manual door like
you've done all your life?" "But the cash registers won't work!"
"So the people are too stupid to use a hand calculator
and make change like they do all over the world?"

He just grumbled about how I didn't understand.
He's right-- I don't understand.

The sun will still rise, the corn will still grow,
trucks will still roll and fools will still be fools.

3290. KV4FZ's couragous Fight and INTERCON'S ILLEAGAL ACTS!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-09 00:00:00 UTC
From: dx390man@aol.com
Message-ID: <19990209113912.16880.00000489@ng-fu1.aol.com>
Source record: 151050

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll by-pass service. One of the most flagrant of all these operations was the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and intercepted many communications that were appalling to say the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California.
Herb broke in and informed the net personnel that this type of operation on an amateur frequency was illegal. Furthermore, Herb stated that their

communication constituted international business communications related to funds transfers and the procurement of equipment and supplies.

DX390MAN's comments = All the mess on 14.313 started because the "so called" net would'nt stand down to Herb - Think about it!

The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to perform sex acts on him. A prominent Haitian administrator was told, by his son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the outraged local citizenry at

Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.)
In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business". Candell actively leagued with other enemies of KV4FZ such as Pat Miller, KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.) Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had

assisted in concocting. (Miller offered his so-called "caught in the act" tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses from pre-trial disclosure! After trial, armed with affidavits from the persons alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of Acquittal not withstanding the jury verdict. The court granted the motion on all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.) When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur

license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.) At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in any way. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codes to make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the

politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions.

What if you're wrong? One glitch can bring the grid down.
The present electrical generation and distribution system
cannot stay up without computers. Those computers are not
solar powered.

> People still know how to jumper around controllers.

But what good will it do without electricity?

> They know how to pipe water manually.

How will they get it out of the ground without electricity?

> Trucks don't need computers to deliver produce.

Trucks need gasoline pumps which run off of electricity.

Consider the electric power grid going down for two months.

Look at the Antennex website, they have a series of projects using upvc plumbing fittings and pipe for a lattice mast, up to IIRC 20 feet or so and costing approx 10 dollars per 10" section.. I dont have the URL but it should be easy enough too find them with a search engine..

>KD7AUR

You could build an A frame mast.

20 ft would be quite easy to manage, although I am not sure about the 3 element beam. Do you mean VHF or HF?

Let me see....(mumble mumble)...you would need perhaps seven 8 ft 2x4. Pressure treated wood is more durable, but heavier. Five of them would go together like this:

I
I I
I I

Put a 1 foot overlap at each section and you will get a height of 21 ft.

The remaining 2x4s are to be used for cross pieces, two at the bottom (each side) and one at the level of each joint.

Drill holes at appropriate places and install 5/16 inch bolts. And don't forget eyebolts for the guy ropes.

In the specification published in "Technical Descriptions, Clover, G-TOR, PACTOR, PACTOR II" the Pactor Huffman compression is character-by-character, not by strings. The algorithm that creates Huffman compression will create a specific sequence, ranging from 2 to 15 bits, but it is based on the frequency of occurrence of the object being encoded, which could be ascii, text strings or any other object. That is probably accomplished via a lookup table, as published in the spec in most programs because there is no relationship between the ascii bits and the Huffman encoding. If it is based on the frequency of occurrence, Huffman encoding COULD be different between one human language and another, although in the case of PACTOR, the relationship between ascii and the Huffman codes is fixed in the specification.

You are right, no ascii need be involved, but, as publically documented, there is a 1:1 relationship between what is sent and one of the "legal" codes, so, on that basis, it can be used on HF.

> I don't think that's what 97.309(a) means, and it is certainly not what it says.
> If it did mean that, then why is there a 97.309(b) for unspecified codes?

I got sucked into the same trap, Gary, and came to the same conclusion.
The keywords in 97.309(b) are "Where authorized by 97.305(c) and
97.307(f)..." Those sections, by virtue of note 5, permit *unspecified*
digital codes only on 50 MHz and above. Oh HF, the notes that apply are
notes 3 and 4, which limit hams to the codes in 97.309(a). The section
under which PACTOR and PSK31 are authorized is 97.309(a)(4), by virtue
of the public documentation.

The rules are not really written very well, but the intent is that, on
HF, the FCC intends that amateurs transmit plain text. That is why we
have the limitation on permitted codes that are plain-text in nature and
the requirement for a publically document one-to-one relationship
between other codes and a permitted code. On VHF and higher, amateurs
can use essentially any digital code, under some circumstances.

This begs a few questions. First, should amateur radio be limited to
plain text on HF? IMHO, we should not. Some hams have been doing
"digital" transmissions on HF and I do not see that the FCC has really
cared. What about UUENCODING and other methods of transmitting digital
information using plain-text codes? I quite honestly don't know how the
FCC would react to those, but I could see it go either way.

But other than the "plain text" requirement, yes; virtually anything
goes, as long as the modulation method has been publically documented,
and even that could be subject to intepretation. To meet the letter of
the law, ARRL published the technical descriptions. Would a ham posting
them on his or her personal web page meet the requirement? Probably.

> Now I'll tell you what I think the FCC *meant* to say in the 1995 revision.
> What I think they meant to say was that we could use any publicly documented
> transmission coding under 97.309(a)(4), and that codings which aren't publicly
> documented would fall under 97.309(b). That makes sense, and is consistent
> with the intent expressed in the docket, but it isn't what the Part 97 language
> *says*. It says the information coding must be in one of the three specified
> telegraphic alphabets, and varicode isn't one of them.

Yes, to part one,but with the further provision that 97.309(b) limits
"unspecified digital codes" to frequencies above 50 MHz. No to Part 2,
varicode is as much one of the specified alphabets as is Pactor, with

its similar 1:1 relationship between ASCII and the transmitted code. There may be Huffman encoding that works on text strings, but Pactor does not use that particular algorithm; it uses a lookup table between ascii ordered by frequency of useage.

I applaud the FCC for having permitted this relaxation of previously onerous requirements. Maybe we can see a similar relaxation of SS any time now. I have a few Part 15 devices I would like to use under Part 97. :-)

We've had lot's of "Glitches" before but has the North American power grid ever been taken down? For any reason?

> The present electrical generation and distribution system
> cannot stay up without computers. Those computers are not
> solar powered.

We've had electricity long before computers, I'm not sure I'm ready to subscribe to the "cannot stay up without computers" theory yet. While there may be some inconviences some would like us to believe that cows will stop milking at midnight 1999 but the big issue is, since all these computers seem to run just fine now is a manufacture REALLY going to stop producing or an electrical company REALLY going to stop making electricity or simply roll the date back a year and deal with the problem while we go on our merry way? Billing and accounting may have some headaches but I don't know of too many machines that really care what year it is, although the day and hour might an issue. I have not seen ANY convincing evidence that would lead me to believe an Electric company would shut down and loose billions of dollars when they could run manually or simply turn the clocks back to keep time sensitive equimpent moving.

Suppose the law firm that Chris Imlay works for was hired by the LMCC to lobby the Commission for the 440-450 MHz band for Industrial-Business radio services. That would be a definite conflict of interest. Indeed, Chris was accused a few years back of having a conflict. Chris threatened to sue (usual lawyer tactic), no such conflict was ever proven, and life went on as usual. Indeed, I do think Chris has done a good job of avoiding conflict on issues affecting ham radio. But the potential definitely exists, and we members of ARRL should be on watch for any such conflicts that might occur, with this case, or other similar ones.

3309. Ham Radio Damages Hearing ! Shocking Details

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-09 00:00:00 UTC
From: mf_luder@my-dejanews.com
Message-ID: <79o4kp$2nf$1@nnrp1.dejanews.com>
Source record: 151096

A ham desperately looking for work goes into Erwin. The personnel manager goes over his resume and explains to him that he regrets he has nothing worthy for him. The ham answers that he really needs work and will take almost anything. The personnel manager hums and haws and finally says he does have a low skill job on the "Tickle Me Elmo" line and nothing else. The ham happily accepts. He takes him down to the line and explains his duties and that he should be in for the 8:00 am shift the next day.

The next day at 8:45 am a knock at the personnel managers door. The "Tickle Me Elmo" line manager comes in and starts ranting about the ham just hired. After screaming for 15 minutes about how badly backed up the assembly line is the personnel manager suggested he show him the problem. Together they head down to the line and sure enough Elmos are backed up from here to kingdom come. Right at the end of the line is the ham just hired.

He has pulled over a roll of the material used for the Elmos and has a big bag of marbles. They both watch as he cuts a little piece of fabric and takes 2 marbles and starts sewing them between Elmos legs. The personnel manager starts to kill himself laughing and finally after 20 minutes of rolling around he Pulls himself together and walks over to the new employee and says: "I'm sorry, I guess you misunderstood me yesterday. What I wanted you to do was give Elmo two test tickles.

Well Hamish and Gary,
I think you should be trying MT63 anyway! My view of the rules
(fortunately tacitly if not officially agreed to by the ZL authorities)
is that so long as the mode and any coding used is public domain,
and the mode does not cause unnecessary interference, then go
for it!

If it wasn't for this attitude, new modes would never be tried.

I think that those who wish to try MT63 or other new modes
that are worried about official approval should simply seek
a specific temporary permit to test the mode.

See you on the air - PSK31, MT63, MT-Hell.... who knows what else?

Paddy and his DXpedition was shipwrecked on a Pacific island. Unconscious for hours, he lay face down in the sandy beach, and was found in this condition by a tribe of cannibals. When he awoke, he found himself tied up in a great big cauldron, full to the brim with water, vegetables, and loads of lovely herbs and spices floating all around.

As he came to his senses, the chief cannibal grabbed him by the hair and shook him violently saying, d'ye see this spear, well I'm gonna ram this into your neck, an' kill ye, and then we're gonna eat ya'.

Paddy said nothing, and then the chief took several paces back, faced Paddy, and started to run at him with the spear out before him. As he reached Paddy, he noticed that Paddy was laughing, stopped, and said to him,'Do you realise what I just said to you'? At which Paddy was in stitches, spilling water from the cauldron onto the sand.

'I'm gonna ram this spear into your neck and you're gonna die, an we're gonna melt you down and eat you.' So, again the chief took a run at Paddy, and again stopped a few inches short. 'Are you thick or sometin', what are you laughin' at ? Do you not understand ?

'Is there something funny about this, that I don't see?' 'Yeah', says Paddy, 'every time you run at me with that spear, I keep shittin' in the pot'.

Yes - the crew and passengers of the Minnow would have been saved if one them had known morse code. That was back in the mid 60s and amateur radio learned from that tragic event. Hence the beginning of the incentive licesing system we still have today.

If not for these changes to the amateur service, we all would have mercilessly destroyed by alien invaders on Independence Day a couple of years back.

CW's finest hour ... and I don't even think it got Oscar!

Then there is California - here ham plates are one of the things they DON'T bend you over for.

I got mine 6 years ago and it was something like $21. I think $9 of that was "plate repelacement fee" that you have to pay if change plates for any reason. After that there are no extra recurring charges for an amateur radio plate. You can have amateur radio plates assigned to a car, truck, motorcycle or trailer in CA.

They are uniquely classified by the DMV. This is something that a co-worker of mine found out about in an unusual experience. He was pulled over in his pickup for speeding and the officer ran the callsign plates. They didn't come back - the response was something like "no record". After 20 minutes of calling different people by radio, etc and having no luck in verifying the plate, the officer called in the VIN on the truck. The VIN came back assigned to the callsign plates. But they couldn't locate the record using the plate. The CHP said it had something to do with the way they put him in the database - having the callsign plate on a commercial vehicle (pickups have commercial registration in CA) made the record disappear... or something. The benefit of all that - the cop let him go without a ticket because it took so long to sort the *valid* registration.

I'm certainly in favor of trying new modes. The issue is the archaic
regulations under which we operate. It is those regulations which
inhibit experimentation. Now it is easy to say, "be a lawbreaker",
and ignore the rules, but IMHO that's a dangerous course. What
rule will you choose to ignore next when it becomes convenient
to do so?

I think the better course is to agitate to get the archaic regulations
changed so as to foster experimentation rather than to inhibit it.
That's why I've been noting that several of the new modes don't
fit with existing regulations. I don't want to inhibit the use of new
modes, just the opposite, I want to see regulatory relief so that
such experimentation can be as unfettered as possible.

The only digital communications software programs that don't copy Morse code, from what I have found, are those programs that do Clover.

The computer definitely has it's distinct advantages, but its inability to determine which mode is being sent would seem to be a liability the estute operator does not have. Indeed, since all the operator must do is determine for the computer which mode is being sent, it would be unnecessary for him to be able to copy SOS since all he needs to do is identify the type of modulation, switch to the appropriate mode, and read it on the computer screen. You may recall that this is the point you originally countered.

But I guess the less than estute amateur radio operator would still need the mailman to decipher the message for him.

Evidently you may have missed a lot of pertinent commentary
on the subject. You might benefit from reading at Ed
Yourdon's webpage (he is said to be a leading mainframe
programmer) at url-

http://www.yourdon.com/

It appears that there is no one who knows, with
any certainty whatever, just how deeply rooted this problem
is nor just how extensive the effects will -or can- be.

An excerpt:

My Y2K
Outlook: A Year
of Disruptions, a
Decade of
Depression

Most of us who work in the Y2K field have an instinctive
answer when asked, "How bad do you think it will be?"
For various reasons, we almost always say, "I don't
know." That's been my answer for nearly four years, and
even today, as we move further into 1999, I have to
repeat: I don't know. For a more elaborate version of
this answer, you might want to take a look at another of
my essays, entitled The Y2K Crystal Ball: What's Going
to Happen on 1 Jan 2000?

But sooner or later, we all have to "bite the bullet" and
make some firm decisions about Y2K, based on our best
guess and whatever information we've been able to
collect. I'm sure there will be some people who abdicate
such a firm decision, because it can be pretty scary: if you
really think Y2K is going to cause major disruptions, it
requires some expensive, unpleasant, unpopular, and
potentially risky actions on your part. Thus, many people
will continue singing the Y2K folk song, "I don't know,"

right up to the stroke of midnight on December 31, 1999. Some are convinced that they can wait until the summer or fall, by which time they hope to have a more definitive picture of the Y2K situation, before committing themselves to a course of action.

For some of us, though, the moment of truth has already arrived. For some of us, there is an epiphany, a light bulb that goes off in our mind, in which we say, "Even if I don't know how bad Y2K is going to be, I have to make some plans." Almost all of us have family members we love; many of us have both young children and older parents, for whom we feel responsible. Most of us have assets to protect, though young people just entering the work force may be less concerned about this issue. But those of us in our 30s, 40s, 50s, and 60s may have a house that represents the majority of our net worth; we may have retirement funds, a stock-market account, or perhaps just a couple thousand dollars in a savings account. Not making a decision about all of this is, in itself, a decision: it
means that we've decided to subject ourselves to the fickle finger of Fate. If we're lucky, Y2K will turn out to be only a minor bump in the road, and we'll sigh a huge breath of relief. If we're not lucky ... well, those who abdicate making a decision would rather not think about it, or would prefer to amass as many arguments as possible to "prove" that Y2K won't cause major disruptions.

I've been pretty careful to avoid making any specific predictions about Y2K, because I, too, don't know. And I'm concerned about the people who send me e-mail, or who read our Time Bomb 2000 book, who often seem intellectually lazy: rather than doing the homework to make an informed decision, they want someone else to tell them. In a world of information overload, this is understandable: we depend on restaurant critics to tell us whether that new French restaurant is any good, we depend on movie critics to tell us whether that latest action
thriller is too bloody, and we even seem to depend on the "talking heads" on television talk-shows to make up our minds for us about the outcome of the President's impeachment hearings. Analysts and commentators serve a useful role for such purposes, but when it comes to really serious issues, it seems to me that every responsible adult should do enough homework to make up his or her mind; thus, I wanted to avoid creating a situation where someone might complain, somewhere down the road, "Well, I made all of my decisions based on Ed Yourdon's

recommendations, and he turned out to be totally wrong -- and as far as I'm concerned, all the problems I'm having now are entirely his fault!"

Nevertheless, it turns out that people have been making Y2K decisions based on my comments, books, articles, speeches, and essays. A friend with 30+ years of experience in the computer field recently wrote to me to say that our Time Bomb 2000 book had been the catalyst in his family's decision to retire from the computer field and move to Belize. Others have made somewhat less radical decisions, but it's clear that at least a small percentage of thoughtful people across the country (if not around the world) are changing jobs, re-distributing their assets, stockpiling necessities, and occasionally moving from what they perceive to be a high-risk geographical location to someplace they hope will be safer. Meanwhile, a much larger majority has internalized all of the information they've seen and heard about Y2K, and have decided to either (a) ignore it, or (b) postpone their decision until sometime in the summer or fall of 1999. For those in category (a), I wish you well and hope that you turn out to be right; for those in category (b), I fear that your options may have vanished by the time you decide to take action, in which case my opinions on Y2K won't matter very much to you.

Thus, I don't think I'll be exerting an inappropriate influence on most of the population if I publish my opinion on the likely consequences of Y2K. After all, I'm just one of many voices in the Y2K field: Peter de Jager has published his opinion in Scientific American, the Gartner Group has published its opinion in a number of recent press reports, the President's Y2K Conversion Council has offered its assessment that the consequences of Y2K will probably be no worse than a winter snowstorm. My opinion, as you'll see below, is substantially different.

How Bad Will Y2K Be?

As the title of this essay has already informed you, my opinion is that we're going to suffer a year of technological disruptions, followed by a decade of depression. It may turn out to be less severe, it may turn out to be more severe; it may turn out that I'm totally wrong in my conclusions. But this is my assessment, and it forms the basis of my own plans for coping with Y2K; if it turns out that I'm wrong, I'll be spending a lot more time apologizing to my family members than to everyone else who should have been evaluating the same data that I've been

evaluating, in order to reach their own opinions.

What Do I Mean By A Year of Disruptions
And A Decade of Depression?

Words like "disruption" and "depression" are rather fuzzy, and they mean different things to different people. What I mean by "disruption" is a problem that's large enough and serious enough that it forces me to change my plans and behavior, if not my overall lifestyle; most of all, it means that the impact will be noticeable. Let me illustrate with an
example: driving from my home in northern New Mexico to the airport in Albuquerque takes approximately 2.5 hours under normal conditions, but I generally add an extra half-hour for minor delays and traffic jams. That's my "normal" plan, and I would never bother complaining that it took an extra ten minutes to navigate through the traffic in Espanola, or that there was a minor traffic accident in Santa Fe. On the other hand, if the highway was washed out by a flash flood, and if that unanticipated problem added an extra two hours to my trip, there's a good chance that I would miss my flight -- which would probably have consequences ranging from minor to moderate to potentially serious. That is a disruption.

The reason I mention this is that recent surveys conducted by Professor Howard Rubin for the Cap Gemini consulting firm indicate that nearly 50% of U.S. companies have already experienced some Y2K problems through the end of 1998; even more interesting, nearly 98% expect to experience problems during 1999. But that doesn't necessarily mean that consumers and citizens will be aware of the problems, or that it will cause a noticeable disruption in their day-to-day lives. Chances are that the average consumer experienced dozens, if not hundreds, of minor annoyances and problems in his or her day-to-day life last year -- and while some of those problems might have been caused by Y2K computer glitches, they weren't recognized as such. The classic example is the credit card renewal problem that existed throughout 1996, 1997, and even part of 1998: it didn't occur to us that the credit-card companies were issuing renewal cards with a 1999 expiration date because merchants weren't able to process a Y2K expiration date. It's a minor inconvenience, in the sense that we have to be prepared to deal with the next renewal card earlier than would otherwise have been the case -- but it's hardly a major disruption in our lives.

But I believe that we will begin seeing Y2K problems that do cause noticeable disruptions in our day to day lives; I believe we'll start seeing them by this summer, and I believe they'll continue for at least a year. As many people are now aware, 46 states (along with Australia and New Zealand) will begin their 1999-2000 fiscal year on July 1, 1999; New York (and Canada) will already have gone through their Y2K fiscal rollover on April 1, and the remaining three states begin their new fiscal year on August 1, September 1, and October 1. We also have the GPS rollover problem to look forward to on August 22nd, as well as the Federal government's new fiscal year on October 1st. There is, of course, some finite probability that all of these rollover events will occur without any problems; but there's also a finite probability that pigs will learn to fly.

It's more likely, in my opinion, that problems will emerge in tax systems, welfare systems, pension systems, unemployment systems, food-stamp systems, and various other financial systems operated by the state authorities; and it's also quite possible that these problems will "trickle
down" to the county and city level. None of these problems will cause civilization to come to a screeching halt, but they will certainly be regarded as a disruption by those who are expecting pensions checks, food stamps, welfare checks, or other financial interactions with the state government. Of course, the average citizen might say, "Who cares? I'm not unemployed, and I don't get food stamps. I'm not retired, so it doesn't matter to me if the pension checks are delayed." But a disruption doesn't have to be something that affects you directly; if it has a significant impact on your children, or your retired parents,
or a sibling, or a close friend, then it's still a disruption. If
your brother-in-law calls you up to borrow the money to pay the rent, because his pension check didn't arrive on time, you will definitely feel that you've been affected by the Y2K bug.

Notice that these examples don't involve embedded systems -- and because of that, they probably won't involve life-and-death situations. The embedded system failures are likely to begin surfacing, in a fashion noticeable
to the average consumer, about a month before January 1, 2000 (because some of these embedded systems have a "look-ahead" calculation that involves dates a month into the future); they'll probably peak on or about January 1st; and then they'll gradually subside over the next few

months. And lots of other business applications and financial systems can also be expected to encounter a larger number of problems on or about January 1st; for reasons that I'll describe in more detail below, I believe they'll continue for at least six months into calendar year 2000.

None of this necessarily means that the electricity will be out for six months, let alone a full year; none of it means that we should necessarily expect to lose nationwide telephone service for a full year; none of this means necessarily that we should expect our bank to be closed for six months. But it does mean that we're likely to be living in an environment much like the Third World countries some of us have visited, where nothing works particularly well. One day the phones will be out; the next day, the phones will work but the air-conditioning in our office building will be down; that will be fixed a couple days later, but then the banks will decide to close for a day because of some unexplained problem. North American and European business executives who try to open a regional office in this kind of environment can often be heard to mutter, "It's just one damn thing after another. You never know, from one day to the next, what's going to work and what's not." And in that kind of environment, it will be difficult (if not impossible) to maintain the level of
productivity and efficiency that many of us are accustomed to; we may be forced to adjust to this by accepting the manana attitude that citizens in many developing nations take for granted. If we don't get it done today (because of Y2K disruptions), we'll get it done tomorrow .... or next week ... or next month ... or maybe we'll decide that it wasn't so important after all, and we simply won't do it.

But they are no harder to simply reconize. All that is needed
is that I reconize the signal and then be able to handle it. Indeed
If I did not reconize the SOS I could still do the same thing if I
wanted to listen in on the signal reconzie that it is CW and then run
a program. OTH I would not consider it burdensome to be required to
reconize SOS and I suppose even the be to send QRS. Not that I think
it is really needed but it is a fair compromise over No Code at all

Did you know that there is a $2 tax on your phone line for E-Rate courtesy of Clinton/Gore. Did you know that there is a $5 monthly tax on ISDN lines courtesy the same pair. Did you know that there are about 100 million household phonelines in the US, but somehow all this money collected hasn't made its way down to the schools who were supposed to be wired to the internet?

Clinton is only responsible for taxing the internet.

there's always a running discussion in the animation groups about the censorship of the classics. there are even web sites for "censored cartoons" including what are known as the "censored 11" (includes "Coal Black an de Sebbin Dwarfs" from Warner Bros.)

no "Now I've Seen EVERYTHING" gags..for example. blackface gags out. "mammy" style characters out. etc.

some 10 minute cartoons are only 3-4 minutes long after being "sanitized for your protection".

today, they actually will film multiple versions of a show to permit flexibility in assembling and editing for whatever rating they want. that solves the dubbing problems

Jones wrote in message <79itsl$kc7$1@news.orbitworld.net>...

if the "G" films really made tremendous amounts of money in theatrical
release, there would be more of them.

hollywood chases after the bucks, and they're very good at it.

Air Force One is one airplane. If your theory held true, Marine One would be
called Air Force One.

Bill Clinton would never seek a ham radio license, as most of you are "quite
odd, overreact to news items and are obsessive", according to White House
Press Secretary Joe Lockhart.

Any other disinformation is utter nonsense and will be dealt with
appropriately.

Yea, but they are still young, fresh and high priced. I want to wait till they start selling a bunch of them and get the prices down. Also get all the bugs out. I bet the later ones that will come out in a couple of years or so will be much better. It's still too young to bother with right now. To me anyway. Also I want small size in "cassettes" MK

You mean I'll owe the Bank interest on my CDs since they
will have been on deposit for a negative time? Setting the
date back is certainly not a solution for any interest-bearing
accounts. The KWH used "last month" will be 11 months in the
future. What will the computer do about that? This problem
has more twists than you can shake a stick at.

How is power connected to this radio? Make sure all power connections are good and tight. You don't want a big voltage drop to the rig. Check all antenna connections and jumpers. You could be "fm-ing" due to a big voltage drop. This happens to many that try to run rigs from cig lighter sockets. If not that, could be a bad coax
connection to the antenna. Or a jumper/connector. MK

Any aircraft the President is in is referred to as Air Force One, whether it's Ronnie babies billion dollar white elephant or if The President were taking a ride in a vintage Sterman.

It's not the plane that holds the designation but is an indication as to the primary passenger.

Strange as it seems, it was accurately displayed in the movie "Air Force One" starring Harrison Ford. If you remember, they haul the President into the C130 after the rescue and state "Rescue One is now Air Forec One"

So, yes, your statement is correct, Marine One would be Airforce One if the President were aboard

3363. Y2K a hoax!?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-10 00:00:00 UTC
From: n3xbu@aol.com
Message-ID: <19990209224606.14654.00000719@ng117.aol.com>
Source record: 150921

Maybe the Y2K problem itself will prove no more than a computer "sneeze", easily remedied and short-lived. However, as I read more and more on the topic, I discover more and more panic among readers of the doom prophecy.

Based on my reading and knowledge of human nature (I'm a psychologist); I see the problem in terms of reaction to what MIGHT happen. What if the most paranoid (or prudent depending on your point of view) 15% of the population stockpile guns and ammunition, take all their money out of the banks, take two weeks off work and head to the country around mid-December of this year?

What if sporadic blackouts and power shortages cause moderate panic in northern cities where temperatures could conceivably be below freezing? What about those who would inevitably exploit that blackout by looting stores and empty homes? Martial law in the cities would have to be imposed, especially in less affluent neighborhoods where many lack funds to stockpile candles, food and water. What fuels will be burned for heat and cooking? How many fires will be started due to ill-conceived heating and lighting systems? How many asphyxiations from kerosene powered heaters? How many gunshot wounds perpetrated by a nervous citizenry? Will hospital generators have enough power? I believe some people will begin to seriously panic around mid-fall of this year. Conspiracy theories will abound. Military readiness will be high, which will make the world a more dangerous place. Many will have questions: will the banks have a record of my life savings? Will gas be rationed by summer? Are these "the end times?", who is the anti-christ?... etc.

Personally, I will stock water, dried and canned food, candles and lanterns for light and wood for heating. I will keep my shotgun loaded in order to protect my family if necessary. I'll keep 100 gallons of gasoline on hand in case of rationing. My philosophy is better safe than sorry.

I have two questions.

#1 How does ham radio fit in to the possible scenarios presented and are your local ham clubs planning a response to the possible threat yet?

#2 What are your personal contingency plans, if any?

Please post responses to RE: Y2K a hoax!?

Brian

I saw a scientist on a TV program (not connected with computers or Y2K) that said that within the past 25 years the world has come to be so reliant on computers that civilization today would come to a standstill without them. There are not many things that could get together to cause a significant number of them to fail simultaneously, but the date bug is the common element that has the potential to affect all computers that have not had software updated to correct it, other than those of late design. This potential problem is perhaps the only common element which could cause mass simultaneous failure.

There appears to be three factors that appear to be the center of concern:

1) Failure (by neglect or lack of funding, or expertise) by domestic entities, companies, agencies, organizations to update older software that is known to contain the defect which can, and usually will, cause failures.

2) Hidden or "embedded" programs, some in chips, that contain the bug but have not been identified as problem areas and likely won't be known until they show up as problems causing failures. The extent of this factor which cannot be accurately predicted is a large part of the uncertainty.

3) Third World activity (or lack of activity) in correcting software containing the bug. Recession in the Orient has slowed this activity to a standstill, and in many places it never did begin at all. Russia is in a depression that is said by many authorities to substantially exceed the American depression of the 30's, and virtually no Y2K corrective activity has occurred. China? Who knows? What will happen elsewhere which could seriously affect others? If we can't be certain of the effects of the problem on our

(USA) systems, how can we draw conclusions about those overseas which may well affect us?

I believe the experts when they say that "Nobody knows what will happen". How could they? Nor will they/we know for sure until well past the new year's arrival and departure. Some problems will show up in advance of the new year since many entities operate on a "fiscal year" offset early by many months.
It is clearly not possible to know how to prepare for that which you can't identify as even likely. So each individual must decide what preparations are practical for his situation, if any preparation is indicated at all.

If this is not a failure of high technology, what would you call it?
Any technical system -doesn't *everything* operate on some kind of a technical system?- which depends on a computerized clock/calendar to function is at risk, with only those which are "repaired" exempt (we hope). What WON'T work? What will? Who knows? Nobody.

All this is happening because computerists and programmers thought it important to be conservative with costly memory in the early days of computing. Who would have anticipated this result?

I put "repeater", "repeater directory" and "repeater frequencies"
into my Web search engine and found a great deal of information on listings
for relatively small geographical areas. To obtain an answer to your
question, you should note the specific geographical area(s) you are
interested in.
The Web pages of amateur radio clubs and ARRL sections in the the
areas that you are interested in may provide repeater listings. For
instance, the Boston (MA) Amateur Radio Club has a Web page listing
repeaters in eastern Massachusetts.

I agree that there are still many unknowns, especially with systems that may not be able to be fully tested (manually adjusting phase as power is routed through distribution points). What I do believe is that those with the real power stand to lose way too much if anarchy prevails due to lack of power, water, money etc. Now, that does not mean that everything is honky-dory; it does, to me, indicate that we can expect hiccups and some true major problems - but they will be temporary versus the end of the world. Yes, it is prudent to take precautions such as paper (remember that stuff?) backup of financial holdings, having some extra food on hand for a week or two and yes, cash in easily spendable denominations (singles, 5's, 10's & 20's) to last a couple of weeks without the ATM, and of course the 'usual stuff' that those of us who live in earthquake territory (I live in Southern California) tend to have anyway.

The biggest and best 'tool' we can have on hand though is an even-tempered & rational mind! Perhaps the largest problem we face is over-reaction to the problems that will happen - and while we may all

argue the extent of those problems, I think we may all agree that they will exist. Rioting/hysteria, 'survivalism', anarchy and Y2K extremist groups may well be the biggest of the problems we face when that ball in Times Square falls at the end of this year (hey......is that thing computer controlled and is it Y2K compliant? 8-}).

Well, it's time for me to get off my soapbox and back to playing with my radios.

73,
Howard

3373. .Boston Area Bone Marrow Screening Drive

Newsgroup: rec.radio.amateur.misc

Message-ID: <fc88914f.36c12a2d@aol.com>
Source record: 150931

FYI

Bob
KD8WU
==========

Hi all,

There will be a Bone Marrow Screening for the National Registry on Valentine's Day this Sunday February 14, 1999 at 70 Forbes Road, in Braintree, MA from 1 to 4 PM.

We as Amateur Radio Operators should know from our recent loss of JY1, King Hussein of Jordan, that bone marrow transplants are used to cure people with leukemia.

Ed Redfield who is 42 years old, with a 2 year old son, needs such a transplant. It is his ONLY hope.

The screening means filling out a questionnaire, and giving about 2 tablespoons of blood. It took me 10 minutes for the entire procedure, when the screening was done here in Newton, on January 28th.

Your screening results will be listed in the National Registry, whether they help Ed or not.

More information is available by dialing 617-689-0282.

The cost of the screening is listed as $40.00 which can be waived by donating blood. To arrange for blood donation call 1-888-22-Donor ext 3024.

I do not know why, but when I donated they requested only 22 dollars from me, and that maybe the new fee. (I don't know).

At any rate, I challenge all HAM's between the ages of 18 and 60 to be screened. The life you save, could end up being some one in your family.

WELL, I'm not sweating the load or anything, but I'm gonna have a couple of weeks worth of beer, baloney, and bucks set aside for the big rollover, just in case. Can't hurt. I really don't think it's gonna be a big hairy deal, though. We'll probably have some interesting stories to tell our grandkids, and we'll see a few humorous pieces in the news about notable screwups, but that's about it.

One thing I would be careful about, though, even though I am sure pharmacies, hospitals, etc are probably on top of the Y2K thing... anybody with any medical conditions that could be affected by a temporary breakdown ought to make contingency plans, such as stocking a month's worth of scrip meds.

All in all, I think tragedy will be at a minimum, and we'll have an excuse for a "once every thousand years" party. Me? I'm not gonna worry too much; just take a few reasonable precautions.

Nope. Not enough money there. These do-gooders and the trial lawyers who
represent them could care less about public health and safety; it's the deep
pockets of the manufacturers that they're after. First, big tobacco. Now, gun
manufacturers. Next: alcohol companies, automobile manufacturers, and fast-food
restaurants. Wait and see.

WASHINGTON, DC. Feb 10. (BS NEWS)--President Clinton returned yesterday from the funeral of King Hussein of Jordan, stating that he found one secret the late monarch's popularity. "It was Ham Radio," said Clinton.

Hussein, known to Amateurs around the world by his call letters JY1, used his radio equipment to foster good will around the world. He often operated from his royal aircraft during trips abroad.

Hoping to capture some of this popularity for himself, Clinton has filed a request with the Federal Communications Commission for the call letters K1B (King One Bill). He also has directed the Air Force to install a radio operating position for him aboard all aircraft likely to be used as Air Force One.

(Sources close to the Pentegon say that "Air Force One" is not a particular airplane, but is the designation for any aircraft in which the President is flying. This will make Clinton's proposal difficult and expensive to comply with.)

At the White House, Clinton's wife Hillary issued a statement saying, "It is well documented that Ham Radio is addictive and consumes the major portion of one's free time, to the exclusion of one's family and outside activities. Amateurs even display a preference to 'chase DX' instead of having sex. Therefore, I fully support my husband in this matter."

The FCC probably doesn't know. :-) Clearly, the HF rules are different
because HF is international. I don't know if there are concerns of other
countries that make it important to still require plain text on HF.

> What about UUENCODING and other methods of transmitting digital
> information using plain-text codes? I quite honestly don't know how the
> FCC would react to those, but I could see it go either way.

I think the FCC would argue -- if they wanted to pursue it at all --
that the data being sent were not ASCII because ASCII is used for
encoding characters (and some control codes). It's only ASCII if the
bytes are actually used to encode text characters. Converting non-text
data to "ASCII" wouldn't fly, IMHO. One can get into a world of hair
splitting here, though!

> But other than the "plain text" requirement, yes; virtually anything
> goes, as long as the modulation method has been publically documented,
> and even that could be subject to intepretation.

Whoa, wait a minute. It's the *coding* that is okay if published. The
modulation method has to be one of those specified in 97.3(c).

Radios are certainly a part of my emergency preparation plans along
with solar power/batteries for them. Y2K is not the only possible
emergency. How about biological terrorism, one rogue ICBM on New
York City or Washington, D.C., polar shift, massive slip between
the Contnental plate and the Pacific plate, large meteor/comet,
WWIII, world-wide depression, etc?

If you read his post Drew you'd see that he doesn't consider you abnormal or unusual, just ugly or light in the loafers.
I mean you must admit, it seems a little questionable for a grown man to be obsessed with a ham radio newsgroup to the point where he posts 'name calling' style posts over and over with references to bathtubs, submarines, invitations to others to 'Talk Tough' to you, and a never ending obsession to let his readers know how they 'lose again'.
So do you consider this normal behavior for a grown man?

I'm curious Drew, you seem to be very knowledgeable about the future of Amateur Radio so please help me to understand why companies like Yaesu, Kenwood, Icom, and Alinco continue to invest R&D dollars into building more radios, seems like they would have dumped amateur radio long ago and spent all their time on commercial interests, but they haven't, they continue to produce newer models with more and more features. I would think that any of these companies would jump at the chance to put a guy like you on the payroll as a consultant, if you play your cards right you could probably work 4 or 5 companies full time and give up your hour a day "Mid Day Marauder" job. I worked in the amateur radio market about 17 years ago and it lead to a terrific career in sales. A guy with your level of knowledge about Amateur Radio could go a long way as a consultant.

I'll give you a hint though, on your resume, leave out the part about your daily reports of 14.313 and 75m monitoring, while your knowledge of all the players names and the stories behind each one may be of value here on the newsgroups it might not look very attractive on a resume.

Good Luck with your potential new career and your consulting endeavors!

The expedient solution is simple, just set the date back.
The machines can only go by what we tell them. If we
tell them it is Jan 1, 1972, they'll all think it is Jan 1, 1972
and go on their merry way. For the most part, the critical
systems don't care what the date is anyway.

When we did the compliance check for our facilities, we
found a number of systems which would crash if the date
were allowed to roll over. So we are simply not going to
let the date roll over on those systems. Some reports
will print out with the wrong date. We can either hand
correct that, or just ignore it. <yawn>

No, there is no reason. Will there be some problems, some inconveniences, sure. Will it be catastrophic? Only if the right wing fundamentalist reconstructionist religious zealots who want to control the world get their way and cause the riots they say they are trying to prevent.

Did you bother to look into the backround of any of these people now making their living by scaring the public with this latest craze? You would be surprised. People passing themselves off as Y2K Consultants are very often militia men, or gloom and doom prophets who also predicted the world would end with the last comet.

Please people, why are human being so ignorant, so gullible, and so in need of gossip and gore? The same people who slow down for wrecks and follow the Clinton BS daily, are now stockpiling food for a disaster that will never happen.

I wish there was some organization to take names and then have restraining orders for all these idiots to keep them off our bandwidth.

Sure there will be problems, but most of the naysayers make their living doing this, over and over and over. They are like the little boy who cried wolf except that everyone keeps listening to them!

If there was a fine for every instance of false and dangerous information passed along by these people or jail time for being irresponsible to the public good, maybe we could all breath easier. Our ability to communicate instantly and pass on panic and bad news is the REAL year 2000 crisis.

Interesting reading and the links are marked for future
sifting. "Experts" are dropping in all over the landscape on
y2k.

I no more believe all -or even much- of Gary North's or Ed
Yourdon's takes on Y2K than I believe every word posted on
r.r.a.p. What I find compelling is all the questions raised,
and not just by this pair, that have not been addressed, and
certainly have not answered.

It has become pretty clear that today, technologically
informed persons can do unpleasant things to you personally,
based on your various identifying numbers, that you will not
even be aware of, and cetainly wouldn't condone. That's
"progress". Need an example?

Not long ago I noticed a $60 charge on a credit card
billing-one that I had not authorized. It was from a mail
order company that I had purchased several electronic items
from over the past several years. The charge was for a
"service" that I had accepted over a year previously as
"free", something to do with vacations. The employee had
emphasized there was "no charge", and hadn't even asked for
any payment, and I had not given any credit card
information. I didn't want it but she was insistant that I
accept it as "free", no obligation.
BUT-the company already had my credit card information on
file from my purchases, and evidently the nice sounding
young lady,-or someone else in the company-, had decided to

bill me for "renewing" the "service" without even contacting me. Did they think I wouldn't notice? How many people would have failed to spot this charge, expecially those who are heavy credit card users? How many times do they get away with this? Of course one very pointed phone call resolved it. How many times are these charges just paid without the individual noticing? Another digital rendition of the almighty dollar chase at work.

Should we presume that there is "no problem" with the Y2K bug just because the fringe has blown it out of all logical proportion and against reason? It seems clear that there IS a problem, and that ignorance and economic conservatism has forestalled a timely solution on very many fronts.
Executives apparemntly didn't want to hear about it since it was going to cose lots of money to fix and was no immediate threat. Since the extent of the problem cannot be determined until after it makes itself apparent, personal caution would seem to be the order of the day.

When a glitch in the Hong Kong or Brazilian stock markets results in a major drop (temporary, this time) in ours, does that build confidence in the ability or determination of the third world to fix their part of it? Who knows how much they matter today in the overall scheme?
Who's betting what on The Next Time?

I find it most interesting that the trolls and zeros who worshiped
at the door in Newington have found the Devil in residence since the
official party line on code hazing changed. It is even more interesting
that these trolls seem to think without the mandatory hazing that
CW will die. I think CW will do just fine, in fact if these
superscilious jackasses of the PCA fall off their high horses guys
like me who have had enough of the crap might come back.
Just a thought.

I'm not sure whether the FCC can issue Bill that call. Since Bill is from
Arkansas, he might have to get K5B. Since he will be issued a license to
his D.C. home, he might have to get K3B.

But since he's the Chief, and since he wants to honor the late King
of Jordan, and since his call should meaningfully reflect his contribution
to the American people, I think Bill's call should rightfully be ....

3406. Re: Y2K a hoax!?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-10 00:00:00 UTC
From: bb840@scn.org
Message-ID: <F6y89A.AJL@scn.org>
Source record: 150964

I think you're over reacting as noted in my comments below:

In a previous article, n3xbu@aol.com (N3XBU) says:

>Maybe the Y2K problem itself will prove no more than a computer "sneeze",
>easily remedied and short-lived. However, as I read more and more on the topic,
>I discover more and more panic among readers of the doom prophecy.
>
>Based on my reading and knowledge of human nature (I'm a psychologist); I see
>the problem in terms of reaction to what MIGHT happen. What if the most
>paranoid (or prudent depending on your point of view) 15% of the population
>stockpile guns and ammunition, take all their money out of the banks, take two
>weeks off work and head to the country around mid-December of this year?
>

I don't see this as a problem, because a significant portion of the
population already does this every year to take vacations (both summer
and winter).

>What if sporadic blackouts and power shortages cause moderate panic in northern
>cities where temperatures could conceivably be below freezing? What about those
>who would inevitably exploit that blackout by looting stores and empty homes?
>Martial law in the cities would have to be imposed, especially in less affluent
>neighborhoods where many lack funds to stockpile candles, food and water. What
>fuels will be burned for heat and cooking? How many fires will be started due
>to ill-conceived heating and lighting systems? How many asphyxiations from
>kerosene powered heaters? How many gunshot wounds perpetrated by a nervous
>citizenry? Will hospital generators have enough power? I believe some people
>will begin to seriously panic around mid-fall of this year. Conspiracy theories
>will abound. Military readiness will be high, which will make the world a more
>dangerous place. Many will have questions: will the banks have a record of my
>life savings? Will gas be rationed by summer? Are these "the end times?", who
>is the anti-christ?... etc.
>

Again, I don't see a problem here. Winter power outages are common every
year as a result of storms. Any outages caused by computer problems will
probably be shorter than those caused by storms.

>Personally, I will stock water, dried and canned food, candles and lanterns for
>light and wood for heating. I will keep my shotgun loaded in order to protect
>my family if necessary. I'll keep 100 gallons of gasoline on hand in case of
>rationing. My philosophy is better safe than sorry.
>

If you wish to do this, that is your decision.

>I have two questions.
>
>#1 How does ham radio fit in to the possible scenarios presented and are your
>local ham clubs planning a response to the possible threat yet?
>

Most hams have some way to operate without commercial power, because
almost all VHF and UHF gear will operate using readily available
batteries (i.e., the automobile battery in the garage).

>#2 What are your personal contingency plans, if any?
>

Staying calm.

>Please post responses to RE: Y2K a hoax!?
>
>Brian
>
>

Don't get this wrong, but there are more important things to be concerned
about than Y2K. 73

I hope I haven't misunderstood your instructions, because this Y to K
problem makes no sense to me.

Be that as it may, I have completed the conversion of the corporate
calendar for the year 2000, per my understanding of the instructions.

The months now read as follows:

Januark
Februark
March
April
Mak
June
Julk

etc...

Please let me know if there is anything else that needs to be done in
preparation for the year 2000.

Sincerely,

Hans, K0HB
IS Department

From: chia@news.utk.edu
Message-ID: <79sor1$4br$1@gaia.ns.utk.edu>
Source record: 150966

Well, anyway I have an FT-530 HT that I love. I had one long ago, and sold it. I never should have. But now I have aquired another that is in better shape than the one I sold! But my question is that it is a serial number of: 3C10xxxx and for some reason the TX stops about 459MHz!? I was curious if anyone else has had this happen or seen this also. My old 530 was fine all the way up to about 470MHz... any ideas, or comments reply here, or via. E-Mail at one of the bellow addresses.... Thanks... I have the service/ tech manual also. Thanks again....

I dunno? I heard an interview with the actual "Patch" and he didn't want to
qualify medical success as the number of people cured. He just wouldn't touch
it. Brian

Hmmmmm... "What will happen at y2k?" "I don't know". He's
wrong?
If you truly believe this all a contrived situation, you
just haven't thought about it. Or don't know enough about
the field of computers to understand it.

Still trying to understand why a grown man plays with toy submarines in the bathtub. Strange, indeed.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

3422. The Best Antenna???

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-10 00:00:00 UTC
From: rlddir1 <rlddir1@flash.net>
Message-ID: <01be54a5$16c68ac0$5e881ed1@xripxgha>
Source record: 151012

I am new to ham and I am interested in dx. I have a kenwood 940 a/st but I now need an antenna. I am considering a GAP DX Challenger which requires no tuning and has no coils or traps or transformers. It covers 8 bands. Does anyone have an opinion on if this is the best antenna or another recommendation?

Thanks

rlddir1@flash.net

Walker was an amateur (perhaps still is, I don't recall seeing a SK notice
on him). What I heard was that he had a private project, and wanted the
excessive filing information for a database. But you could be right that
he just didn't like repeaters and wanted them to be as difficult as possible
for amateurs to have.

That may all be totally true. If he made some assertions,
I'd be skeptical. But he ask cogent questions that I don't
see anyone answering. And he claims no answers.

I can easily believe that many or maybe even most of the
domestic problems are being handled, even if it may not to
be possible to say with certainty to what extent they exist.
But I don't doubt that the situation is much more bleak in
many overseas areas. With the interlacec world economy, what
would it take to uninhinge the whole economic state of the
world? If you know, please share the knowledge with the rest
of us. International affairs affect our domestic activities
and our stock market in ways undreamed of even 10 years ago.
I don't see many certainties around anymore.

The climate here in western Oregon is pretty hard on outside wood, but my A-frame has lasted 15-20 years with nothing more than a couple of coats of deck stain. I've re-stained it maybe 3 or 4 times in that interval. It's also important to keep the wood off the ground. Otherwise, in this climate at least, it'll quickly rot and/or get infested with termites. I got 3 concrete pyramids -- the variety with a hole in the top -- at the local home-improvement store, and put a bolt into each, threads up, with a little concrete. The bottom board of the A-frame is drilled in three places for the bolts to stick through, and the A-frame is set down on the pyramids to keep it off the ground.

Why not use treated wood, Roy? It is sealed and termites don't
like it. "Treated" wood is rated for ground contact.

3430. Family Radio & CB Questions on Range in Hills/Mtns

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-11 00:00:00 UTC
From: Wayne Watson <mtn_view@sirius.com>
Message-ID: <36C38CCC.ED6E7142@sirius.com>
Source record: 150770

I was browsing the C. Crane online catalog and noticed something called family radio, and also noticed they had CB radios. Apparently FR has about a 2 mile range. If I used it, I'd probably be using it near my house which is pretty hilly. We have at least one 300-400 foot hill between my home and the city. Is there any hope of using FR in this case, or even CB? I would guess CB has a greater range, but how does it do in the hills too? Apparently 2 meter SW is best under these circumstances. Comments? (I'm just getting my feet wet with this technology.)

I'd rather just keep the wood off the ground than use wood laced with the toxic stuff used in pressure treating. That's a personal twitch, though, and treated wood should work o.k. if you're so inclined. I realize that the deck stain isn't lovely stuff, either.

3433. VX-5R CTCSS problem....

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-11 00:00:00 UTC
From: Francis <ve2fgs@videotron.ca>
Message-ID: <cCNw2.930$J5.610@weber.videotron.net>
Source record: 150773

Hi there,

First of all, excuse my english.

I bought about 4 days ago a new VX-5R. I think I have a problem with it. I would like your opinion on this.

The problem is when I use CTCSS tone in receive mode. When I operate on a repeater with CTCSS, my radio is very slow to react to the good tone. That means that when I am transmitting, everything is fine, but when I let go the PTT, it takes about 1 to 1 1/2 seconds for the radio to re-open the squelch by itself. (and the repeater is always transmitting the tone...) Wich means that I loss the beginning of the answer that the other person is saying. For example, if the person says "ok Francis, so I'll talk to Jeff tomorrow", I'll only ear "to Jeff tomorrow".

It's very disturbing and the only way to ear the transmissions after a PTT is to hold the MONITOR button, or te remove the CTCSS in receive.

Is there something to do for this ???

Oh, by the way, my radio's S/N is 8N.....

Thanks for your help

_____

I'd be disappointed if you had actually experienced QSO's at 20 wpm CW, or ran a few contests, or ever built any amateur gear and then took the sour grapes attitude that you have toward amateur radio. But since you never have, and chances are real good you never will, there's no way to disappoint me. Your commentary and general attitude are exactly what I expect from someone who never quite made the grade and now feels compelled to try and tear it down. Much like the little boy who is denied access to the tree house, if I can't go in, then I'll throw rocks at it.

> If you ask the average American, they would describe ham radio operators as

> inside a restaurant to talk to their friends in the car outside?", or "why
> don't they just talk like normal people on their radios?"

Does it bother you that someone might consider you weird or strange? The same was said about computer jocks for years, I suppose if your not comfortable in who you are and what you've accomplished in life you might be upset if your neighbors thought you were weird.

Normal people wouldn't say "over to you Drew" during a conversation with 3 or more people but it's a way of turning it over during a round table on radio. Wonder why photographers "shoot" people instead of just taking their picture? Wonder why stage performers say bring up the "house" lights instead of turn the lights on. You see Drew, different groups use slang and buzz words throughout their exchanges of communication, amateur radio is no different. It surprises me that you don't understand that.

> An amateur radio license exempts me from the restrictive mobile scanner laws in

Was it necessary to invest in the amateur radio equipment you sold to keep from getting your AOR-8000 confiscated? hee hee you remind me of my Beagle when she gets confused she too chases her tail. Since I highly doubt you sold your amateur radio equipment for more than you paid I would say no, it was a poor investment.

3435. WANTED: HAM LAWYER WHO WANTS BIG BUCK$!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-11 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36C3A8C9.D22ABD1C@ix.netcom.com>
Source record: 150775
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.boatanchors

Wanted:
Gutsy ham-radio lawyer who wants to win BIG!

Jurys are awarding MILLION$ to people for willingly huffing cigarette
smoke.
They just awarded to the tune of 4 MEGS against gun makers
because punks used their guns to kill each other!

Look-- It's obvious now that people will do ANYTHING to be
relieved of their responsibility for their own actions.
What a chance to score some MAJOR bucks!

I've been victimized over the years in ham radio.
I can't win contests. My signal is never louder then
anyone elses. My family gives me grief over the radio.
This is "pain and suffering," right?
Icom, Drake, Yeasu, Kenwood...they built the rigs!
It's all THEIR fault. They added all those nice
features when they KNEW it would force me to
buy and use them!

Hey... here's a better one. These guys got more money.
I'm fat. It cost me lots in medical bills, pain and suffering,
social degradation, etc. Let's go after McDonalds! Burger King!
Hey, they didn't put any disclaimers on their burger wrappers telling
me that if I eat this stuff I'd get clogged arteries! Their
commercials on the tube FORCED me to over-eat!
Let's rake little miss Wendy over the coals;
she's gotta be worth a few mill in judgements.

Why stop there? Go after the big farmers! They raise the hogs
that make all that pork sausage, right? Look out, Jimmie Dean!
You didn't tell me your pork would give me thunder thighs.
It's not my fault. Your deceptive advertising and all those
bright packages hypnotized me. I'm a victim of big-money
food companies. They added cream, milk and other fats
to ice cream when they KNEW that it causes fatty deposits!
Don't deny it! When you put seasoning in hot dogs
you were fully aware that it would FORCE people to eat more
of them. Think of all the french fries...
Why, we'll own the state of Idaho even after the appeal.

Say... this could be bigger then I thought. I walked out
in the rain last week without a hat and got a cold.
God made virus bugs.... Wow.... The possiblities!

Here's to a world without personal responsibility!
As long as someone doesn't blame ME...

Dave AB5S

Wiretapping in the State of Florida is a felony. What happened to
the people who tapped/taped Gingrich? This country is no longer a
country of laws - it is a country of gangs with criminals running it.

That's good news....but how about making it more useful? ie, include a complete catalog, including prices, descriptions, photos, etc, for all the accessories avaible for past and present rigs? That would be really useful. I have a 747GX and a 8100R, and it seems darn near impossible to learn what is available for either one of them. There is a brief mention in the manual of the 8100R of accessories, but no details. I have yet to be able to find a way to learn what was or still may be available for the 747GX.

John KF6TJA

Love both rigs, by the way!

3443. VX5r - Does it work? or Wideband Underperformance

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-11 00:00:00 UTC
From: garybuchholz@ibm.net
Message-ID: <36c2a15a.11902425@news-s01.ny.us.ibm.net>
Source record: 150820

So, nice specs.

Does it really work? Most of these wideband radios underperform a $49
portable on AM/FM/SW. Does it receive broadcast AM as good as a $9
flavor radio from radio shack?

Built-in ferrite loop for AM/SW or is this heard through the tiny
stubby duck antenna.?

Whats the scoop on non-ham reception from someone who owns a vx5.
If its a way underperformance, then whats the point?

thanks
gary / ke9zm

Dear Mr.Hampton,

Good for you!

If youtink that the people who populate RRAM and RRAP represent anything more than a minute minority of ham radio, you'd be very mistaken.

Good luck on your ham radio "career". I have been licensed 26 1/2 years now, and loved every minute of it!.. Good Luck.

Actually, Harris, he has had a ham ticket for quite some time, and is not quite as ignorant as he seems. He just takes an unseemly amount of pleasure in getting people on this ng worked up enough to get in a running pissing contest with him. If you read his posts under his MNMANIAC screen name on other groups, you will find him to occasionally be fairly sensible. For some reason, he chooses this particular group to show his ass to. I won't even try to guess at the reasons for this, other than possibly he couldn't get his code speed up to General... who knows.

I put him in my killfile as an author, but if you guys are gonna let him be your puppeteer, I guess I'll have to add his name, nicknames, callsign, and other monikers in the subject filters. Bummer. I know I'll miss one and see a 20 post thread in my download some morning because I missed one.

Give it a break already. Most of the regulars don't even see these threads anymore because they are killfiled. If you did the same, yeah, you would always have a vague recollection of CBRAMBO being a jerk, but it would not be foremost in your minds, and we would see a modest but noticeable bandwidth reduction here. You are not gonna be able to insult him enough to run him off the newsgroup. That has been tried. I think he probably saves the worst of the insulting posts as trophies and remarks to himself how much he must have agitated the sender to make him use such language. If you ignore him, he will go play somewhere else for a while until there are enough newbies who aren't hip to his game to make another decent puppet show.

Don't take this as a flame, please. It is not meant as one. Just trying to help maintain a bit of decorum here.

Actually. Gerald, "None" didn't say in which direction he think that ARRL has "recked" Amateur Radio, so we don't know which side of the fence his beliefs are found.

Perhaps the alt.test newsgroup included in his original post indiates that he didn't intend that anyone take his post seriously. (BTW, please delete rec.radio.amateur.space from any followups to his post; the people who use that really don't want to see these sorts of off-topic discussions.)

This is true.

I did not mention that I have built one myself. It is 36 ft tall and is
made out of combinations of 12 ft and 8 ft 2x4s.

The traditional A frame mast was made out of 2x2 lumber, but 2x4 is much
sturdier. I estimate that it will stand up to 100+ MPH winds with no
trouble (am using 5/16 inch steel guy wire and 4 ft anchors).

The reason I mentioned using 8 ft 2x4s is that the original poster wanted
something portable. An 8 ft piece would be much easier to carry around than
a 12 ft piece. In my case it was for fixed use.

By the way, I had originally planned on a 48 ft mast, but it proved too
heavy to erect, so I shortened it to 36 ft. Even then I had a total of 4
people to pull it up (including myself). I guesstimate that a 21 footer
would be no problem for 2 or three 'trained' people.

Contrary to "urban legend" in most of the newsgroups above,
"authorities" won't / can't lift a finger unless the party
whose communications are being intercepted files a complaint
which states, inter alia, that the interception was done
withouut permission (an essential element of the offense).

And it should not be. The radio waves belong to the people, period. If you want privacy use a wire or use a digital signal. I find it very intrusive that Congress has seen fit to put it's nose where it doesn't belong.

If you have not figured it out what Congress really
is about?

If you cannot understand what Congress exits for?

Themselves.

Perfect evidence with the House of Representatives (this
name has got to be changed after the Clinton apology is heard)
as to how they really think...they are totally out of synch
with who they are supposed to be representing.

perfect evidence to use is what the H/Reps did with
the Pres. this is abuse of office against the Pres of the
usa. they collobarated against the Pres. they did so by
being "religious" and that doomed them.

they did not listen to who voted them in. and then
scoffed at the polls saying that "no one really will give
a damn two years from now how or what we say or do" with their
little exercise in "abuse of office" at the expense of the
people...and 85 million dollars spent since the HACK, Starr
took over.

or tried to.

Congress has no idea of what they are there for. None.
so they masturbate together and consider that their goal.

in the end: the people - the voters -

it's what they voted for . Change the voters and you
change the elected.

When you think that the Christian Coalition is behind
the attempt to get Clinton out for religious reasons and not
for "laws" then you had better wake up and count the rocks
to begin throwing at yourself.

The HOUSE republicans mostly religionistic fecal matter
who no longer want the Constition to survive. By doing this
maneuver and had it succeeded...thet relgious right could be in control
next time a President is too independent from them...

remember: Pat Robetson still wants to be the Messiah of
the USA. he wants to save us. For his purposes.

you had better learn more about the backgrounds of how the
Congress is when dealing with religion and how it affects
their votes.

bill conduit
etc.

Urban myth. Radio waves are not tangible property.

>If you want privacy use a wire or use a digital signal.

I agree 100% but the Supreme Court, the interpreter of our
Constitution, has said otherwise - see below.

> I find it very intrusive that Congress has seen fit to put it's
> nose where it doesn't belong.

FYI - the ECPA is an outgrowth of Title III of the Crime
Control and Safe Streets Act which was passes in the wake of
the U S Supreme Court's _Katz_ decision that established the
legal doctrine of "expectation of privacy" in communications.

All it does is to estatablish a tangible framework in which this
"expecation of privacy" will operate. Nowhere does the ECPA say
that signals can't be intercepted per se.....it says that it is
unlawful if it is done without permission of the sender or
without authority conferred by law. A major difference.

The intent of _Katz_ and therefore Title III was to put
limitations on law enforcemnent in requiring warrants, etc.
The (meat)axe cuts two ways.

I've built two A-frames, one from 2X4s and the other from 2X3s. The 2X3 version is a whole lot lighter but still plenty strong, and I recommend that approach. I've taken down the 2X3 version because a nearby tree (a giant sequoia) grew to antenna-support size. The 2X4 one is still up after about 15-20 years. Both are about 40 feet tall, and were made from 22-24 foot pieces of lumber. Don't know if you can still get them this long. This construction obviously wouldn't be portable, but might give you some ideas.

The longest I have been able to find at the average lumber yards is 20ft.
I use 2x4s up to 30ft and then a fiberglas pole for the last 20ft.

"The SG-504 provides a leveled output amplitude that is variable from 245 to 1050 MHz in two bands. Frequency is indicated on a high resolution tape dial tht expands each band over 28 inches. The accurately calibrated output voltage is variable from 0.5V to at least 4.0 V p-p into 50 ohms." Includes internal 6 MHz or 50 KHz internal calibration source. Unit is designed to work with standard TM500 series power racks. Amplitude is read out on a calibrated vernier dial. This unit includes the hard-to-find leveling power head which feeds back actual power output to maintain constant amplitude across the entire freq range. Very stable freq and amplitude output. Excellent for calibration of high end O'scopes and for receiver tests with an external attenuator. Includes freq monitor out to fine-tune the freq with a digital counter (not included). Has an FM input for FM of the signal or for phase-locking the unit to an external source. Rear-card connections include FM input, frequency monitor output and amplitude control. Original 1988 Tek cost was $4060. Sorry, no manual included. Buyer pays shipping. Shipping weight will be about 8 pounds from 93523 (CA). I will accept prepayment or COD with certified check/money order, or personal check with ample positive feedback. Happy bidding!

And you are privy to my medical file are you? No, what you are saying is
In your opinion I am not disabled. In your opinion I am able to work. In
your opinion you are a human being, and not a bottom feeding piece of pond
scum. In your opinion, someone actually cares about your opinions.

Here are some fact's looser. I have no intention of falling into your "hate
campaign". And if you continue these OFF SUBJECT post's I will happily
report you to DejaNews and have your sorry butt elliminated permanently.

Now go crawl under you rock Drew.

Dan/W4NTI

Heh heh, Whenever someone agrees with another post you immediately put them in the "sticking up for" catagory. Who sticks up for you Drew?

> >I mean you must admit, it seems a little questionable for a grown man to be

> You must enjoy it since you make time to summarize my activities in detail.

Oh I most certainly do enjoy it, after reading most of your posts I feel like applying for college credit towards a Psychology degree. Your replies take on a certain Pee Wee Herman style, when you can't make an intelligent argument (I haven't seen one yet) you default to the "I know you are but what am I" posts, not really creative but it appears your not capable of much more, or just aren't willing to show it here.

> >So do you consider this normal behavior for a grown man?

> here is...", "The location here is", "hi, hi", etc., and communicating via
> "beeping" noises made by tapping two pieces of metal together? Is this normal
> behavior? Most people would think not.

Yes, it's as normal as pursuing any other hobby or acitivity. You see Amateur radio is a hobby Drew, there are many facets to the hobby including contesting, working DX, building equipment, mastering morse code and being of public service if need be.. None of which you apparently ever got a handle on, so since it didn't work for you, you focus on any negative aspect of it you can find. It's much easier that way, you see learning how to build and and understanding radio requires a bit work. Anyone can highlight the negative aspects and make it their reason for not being

able to achieve the higher levels in the hobby. This has nothing to do with the class of license you hold. Let me guess, you heard none of the phrases or acitvity you listed above before you decided to study for your license right? Sheesh...

Come to think of it, even the Stumpjumpers are one up on you, they at least talk to each other about different antennas, transmitters, and getting a better signal into the air. You apparently couldn't even fit in with that crowd since you've sold your equipment and made it your career to post trolls on the internet. You must have somehow wanted to be a part of the gang since you post weekly reports on all their activity and seem to know most of them. So if it's so abnormal why did you take the time to get a license in the first place?

Tim ka8ddz

3481. Re: A 2M YAGI to suite what I have at hand.

The ARRL Antenna handbook or the RSGB amateur's handbook are better sources of information for simpler/smaller yagi antennas.

Also Amateur Radio, Ham Radio etc magazines are useful sources if you have access to a worthwhile library.

3483. AURORA WATCH: Middle Latitude Auroral Activity WATCH - 11-12 Feb

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-11 00:00:00 UTC
From: oler@solar.uleth.ca
Message-ID: <79vit8$951@mars.online.uleth.ca>
Source record: 150860
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.amateur.misc,rec.radio.shortwave

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 18:40 UTC, 11 FEBRUARY

/\

TO RECEIVE THESE WATCHES AND WARNINGS VIA E-MAIL, SUBSCRIBE USING THE
FORM PAGE AT: http://solar.uleth.ca/solar/www/sublists.html

ACTIVATION: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 12 FEBRUARY

HIGH RISK PERIOD: 11 FEBRUARY (UT days)
MODERATE RISK PERIOD: 11-12 FEBRUARY

PREDICTED ACTIVITY INDICES: 24, 12, 12, 10 (11 FEBRUARY - 14 FEBRUARY)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR AND AFTER LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR - GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

SOUTH-CENTRAL BRITISH COLUMBIA TO SOUTHERN MONTANA TO SOUTH DAKOTA
TO SOUTHERN MINNESOTA TO WISCONSIN TO SOUTHERN MICHIGAN TO DARK SKY
SITES OF NEW YORK STATE AND SOUTHERN MAINE.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

EXTREME NORTHERN UNITED KINGDOM TO EXTREME NORTHERN EUROPE INCLUDING
MUCH OF NORWAY, CENTRAL TO NORTHERN SWEDEN AND CENTRAL TO NORTHERN
FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN REGIONS OF NEW ZEALAND
AND POSSIBLY EXTREME SOUTHERN REGIONS OF AUSTRALIA MAY ALSO SPOT
PERIODS OF ACTIVITY.

SYNOPSIS...

A progressive solar disturbance began impacting the Earth near the
middle of this UTC day. Solar wind data over the last several hours has shown
a steep increase in the magnitude of the interplanetary magnetic field.
Although these fields are presently oriented in a direction that is not
condusive to producing auroral activity, there is a good chance these fields
might rotate into a favorable orientation over the next 12 to 24 hours. If

this occurs, intensification of auroral activity could rapidly occur and produce visible activity over the middle and high latitudes. Since the moon does not rise until morning twilight, conditions are optimal for observing activity under dark skies.

Please note that this is a watch for potential intensification of auroral activity over the middle latitudes. It is not a warning. Should conditions become condusive to producing more intense levels of auroral activity, this watch will be upgraded. Otherwise, it will remain active until 19:00 UTC on 12 February afterwhich conditions will be re-evaluated. If the conditions warrant, we will extend this watch beyond 12 February. However, at the present time, we believe the disturbance should be nearing the end of its passage through the Earth system by 19:00 UTC on 12 February.

Current POLAR spacecraft auroral imagery (as well as statistical maps of current auroral activity based on auroral zone energy deposition data) may be obtained from: http://solar.uleth.ca/solar/www/aurora.html

User's of the Ge+lert software will be able to monitor current auroral activity conditions much more accurately and in near-realtime. Consult: http://solar.uleth.ca/solar/www/geolert.html for details on this software. For those with more serious needs to observe actual solar and space weather conditions in realtime, check out our SWARM software at: http://solar.uleth.ca/solar/www/swarm.html

PLEASE SUBMIT ANY OBSERVATIONS YOU MAKE OF AURORAL ACTIVITY TO: http://solar.uleth.ca/solar/www/auroras.html

(ANYONE WHO PURCHASES GE+LERT DURING THE MONTH OF FEBRUARY WILL AUTOMATICALLY RECEIVE ONE YEARS E-MAIL SUBSCRIPTION TO ANY OR ALL OF OUR E-MAIL PRODUCTS, INCLUDING THESE AURORAL ACTIVITY WATCHES AND WARNINGS)

** End of Watch **

>portable, but might give you some ideas.
>
>Roy Lewallen, W7EL

2x4's in that length might be hard to find, but 2x8's or larger CAN be found, and then ripped down to the desired dimension. If the final-dimension lumber is thoroughly treated, first with a good coat of copper sulphate, and then with 2 coats of linseed oil, followed by a finish cover coat of good exterior paint, it will be weather and trouble proof for YEARS! Use of stainless hardware and long deck screws instead of nails is a good idea too!

You were doing great until this last sentence. Any Marine Corps aircraft
that the President is aboard *is* called Marine One. If he boards a
Coast Guard aircraft it's then designated Coast Guard One. (One of
the cable channels did a documentary regarding this topic.)

To Whom It May Concern,

>>So, yes, your statement is correct, Marine One would be Airforce One if the President were aboard<<<

This is wrong.

>>You were doing great until this last sentence. Any Marine Corps aircraft that the President is aboard *is* called Marine One. If he boards a Coast Guard aircraft it's then designated Coast Guard One. (One of the cable channels did a documentary regarding this topic.)<<

I don't know about the documentary, but the rest is correct.

> domestic problems are being handled, even if it may not to
> be possible to say with certainty to what extent they exist.

Today a customer wrote my employer in a panic claiming proof that
our website isn't Y2K compliant. A VP saw this e-mail, and given
the way corporations work I had to re-state why this isn't true.

Even though we have a QA department which actually tests things.
The easiest way to convince the VP was to set the clock on my test
server and client to Jan 1, 2000. Nothing bad happened, except
I wasted a half hour of my time today.

As an advanced exercise I put the client and server in different
time zones so I could test the mixed millenium bug. (God I hope
the news media doesn't hear about that one!)

I will be so glad on 1/1/2000 when this whole Y2K annoyance is
overwith. Of course the VP's will find something else to worry
about, but I guess that's their job.

> But I don't doubt that the situation is much more bleak in
> many overseas areas. With the interlacec world economy, what
> would it take to uninhinge the whole economic state of the
> world

Trade with other countries is a small part of our ecconomy. This
is why we can remain an "island of prosperity" while other nations
are having problems right now. If the Y2K bug did slam some other
country it would be an opportunity, not a crisis, for the US. We
would be able to sell them the consulting services to get out of
their bind. I know that sounds somewhat selfish, but that's the
way nations relate to each other.

The solution is called software testing and most finance and
banking companies are way out in front on this one. It helped
that the Fed gave them a push a few years back.

Most real time control applications (ie industrial controllers)
treat time as an abstract quantity. They don't know or care what
year it is, only that time is an integer which keeps getting
bigger at the same rate each clock cycle.

Hi,

After skimming through the 1998 ARRL Handbook I thought I may be able to convert (read rebuild) a broken UHF/VHF TV antenna to suite the 2M band. In the ARRL Handbook there is a design for a 12 elements YAGI (or more up to 17 elements if you can fit them) giving about 12.5dB of gain.

So I got busy, very carefully removing all of the elements by drilling the pop rivets.

A this point I took stock. All I could save were have 6 elements 0.9m long x 3/8 inch. So I have to get a couple more, that shouldn't be too hard. The real problem started when I found that I only had 1.98 meters of beam to play with. The ARRL design would at most fit 7 elements. A quick peek at the ARRL hand book confirms that the presented design (logarithmic... what ever that means) only works well with 10 elements or more. So I am NOT going to get 12.5dB, OK. But I might as well use an optimal design for 7 elements.

Can anyone point me at a WEB page or a piece of design software so I can come up with a design for a 2M YAGI that will fit on 1.98 meters of beam.

Thanks,
Dave.

>called Air Force One.

Hmmmm. My understanding was as follows:

"Air Force One" is a tactical call sign. There is more than one jet aircraft
available for the President.

However, the 'chopper carrying the President from the White House has a
different call sign to avoid confusion over Washington air space.

How about one of you "inside the Beltway" types clearing this up. (I know
you're there....quit lurking and give us the answer.)

Hams Help Staff Colombian Relief Call Center

MIAMI, FL, Feb 10, 1999--Amateur Radio operators are helping to staff a telephone call center for those seeking to get in touch with family and friends in the earthquake-stricken region of Colombia. A

(SNIP!!!!!)

David Rosen, K2GM, of the Radio Readiness Group says continued spotty telephone service to the region has kept the call center busy since it started up February 2. Much of the traffic is directed to the city of Armenia, in the state of Quindio. Rosen said the center resulted from an AT&T request to the Radio Readiness Group and SIRA for help in furnishing information about the affected region to callers unable to get through by telephone.

I'm SHOCKED ! Where's leftist Bill Gates with computer donations, where are those oh-so-reliable internet connections, what about those cellular phones that are SO COMMON AND POPULAR WORLDWIDE as the leftist media has us believe ?

You are, it appears, totally unfamiliar with the ECPA which
specifically prohibits such eavesdropping of cellular
(analog or not) and, more recently cordless.

>Which BTW you could also use in defense against Virginia's anti-radar
>detector law. Since the federal law on this supercedes Virginia's law.

So how come the law is still on the books in VA? The folks
at R.A.D.A.R. have not successfully been able
to win a court case against the law...as far as I last had
heard.

>IF however, you encrypt, even if it's the simplest and easiest to break
>scheme, then your conversation can NOT be listened to, since by your

Before you finalize the design on your home made wooden antenna support,
go to the lumberyard and get prices on various sizes of boards. You may
be pleasantly surprised to learn that LONGER pieces are sometimes
priced lower than shorter pieces because of supply and demand.

Try turning off the tone squelch feature, and only use the tone encoder.

That is such an annoying "slogan". Suppose I learn CW but don't know anything else about Amateur Radio - is that reason enough to issue me a license? I think not.

I know enough to have been issued a license from the FCC to operate the radio that I own. I know enough about being an Amateur Radio Operator without knowing more than a few letters of the alphabet in CW. I have no desire to learn CW for the moment, I have no desire to own an HF rig, I have no desire to operate outside the 2-meter band. Does that mean I am less qualified to operate on 146.52 (for example) than someone who can tap out 20+ words per minute? Absolutely not. You folks who don't want to see CW abolished are not doing much for your cause by insulting someone who doesn't care for your mode of communication as much as you do.

I say, if you can't drive a standard transmission vehicle, your license to operate should be revoked until you learn. See the similarity?

Yes that is true it is against the law to monitor cellular
communications. If this law is passed how is the government going to enforce
it by prying more and more into everyones private life ? Our society is
preoccupied with legislating absolute nonsense at the expense of personal
freedom . People who endorse this and similar feel good legislation shoud go
and live in a nursing home as this is the kind of life they promote - total
lack of personal responsibility at the expense of personal freedom.
The persons who sponsor this are not smart enough to figure out that the
persons they need to be worried about will not be affected by this
legislation at all. All this does is represent the interests of big business
and big government against every single individual in the United States.
People do you actually think that legislation is written with your best
interest as citizens or merely to give government more and more power.

I have met quite a few Florida hams using nextel 2 way radio. I've been an
active ham, mostly on HF, CW and Phone, for over 30 years. I know that
in some areas nextel service is poor, lousy even. Please-- don't send mail to
reiterate that fact. Not so in Florida. If you are a
fellow ham using nextel two way radio in Florida, please take a look at my
web page at: http://www.geocities.com/SouthBeach/Coast/2863/
I'd like to have a qso with you on nextel. It is the ultimate HT experience.
I do not work for or have any financial interest in nextel com. I just
enjoy the magic of 2 way communications.
Hope to hear from you soon!
73 Al

>enforcement. This is completely infeasible -- for one thing, such
>informal clubs can have no enforcement authority,

The FCC has no Constitutional authority over private communications.
It does have the raw police-state power to enforce its will upon the
meek, ignorant, gullible masses. There's a major difference between
the "authority" to implement Law, and the "power" to implement law.
In America, authority comes from the U.S. Constitution. Power comes
from the usual source, the end of a gun barrel. In America, the
government has only the authority to *regulate* private communications,
not to license it. If the substantive effect of private communications
is confined to a state, it is to be regulated by that state. At least
one FCC employee recognizes this:

http://www.kobres.com/documents/fcc3-3-97.html.

This is the source of the [false] rationale for the "authority" to license private activity: http://www.kobres.com/emer.html.

To the gullible masses: Please go learn what your Constitutionally protected rights are before flaming me on account of your ignorance.

An interesting but predictable response... Consider this: Without the FCC, the broadcast bands would be a mass of heterdynes with each station trying to use more ERP than the others. Some empowered organization is absolutely required in order to prevent abuse. If not the FCC, then who? By the way, broadcasting isn't "private communication". The "state line" argument is also pretty tired. Given that some kind of frequency coordination is required by physics, I'd like to know what kind of regulatory structure you would propose for broadcasting.

KING HUSSEIN, JY1, SK

Radio amateurs around the world joined in mourning the recent death of Jordan's King Hussein, JY1. Hussein, 63, died February 7. The Middle East's longest-reigning ruler, he'd been Jordan's king for 47 years, taking the throne when he was just a teenager. His son, Abdullah, 37, succeeds him.

Hussein had earned a reputation as a catalyst for peace and as a conciliator in the Middle East. President Clinton was among the heads of state from around the globe who gathered in Jordan February 8 for Hussein's funeral.

Hussein had been active in recent months from the US while seeking cancer treatment at Minnesota's Mayo Clinic. A QSO with JY1 was considered by many hams to be both an honor and a privilege. His elegant QSL card was prized.

Hussein was a life member of the ARRL. ARRL Executive Vice President David Sumner, K1ZZ, called him "an enthusiastic radio amateur whose support was invaluable to us in obtaining new amateur bands at the 1979 World Administrative Radio Conference." Sumner recalled that in May 1979, International Amateur Radio Union President Noel Eaton, VE3CJ, was invited to Amman to meet with King Hussein.

"Jordan's support of the Amateur Service was much in evidence at the conference that fall, and was a crucial element in our success," Sumner said. The WARC-79 resulted in Amateur Radio's gaining the 30, 17, and 12-meter bands. That same year, JY1 was featured in the film, "The World of Amateur Radio." Hussein regarded his 1983 contact with Owen Garriott, W5LFL, on board the Space Shuttle Columbia, as a high point in his Amateur Radio activity.

King Hussein also participated in the historic 1995 joint Israel-Jordan JY74X operation on Mt Nebo, where hams from both countries participated in a Field Day-like operation. The King put in appearances both on the air and in person, much to the delight of the participants and those waiting to work him and JY74X.

Hussein's friend Bruce "Blackie" Blackburn, W4TA/JY9BB, of St Petersburg, Florida, called him "one of the world's most respected amateurs" and recounted many stories about King Hussein as a person and an avid Amateur Radio operator. Blackburn said King Hussein "promoted Amateur Radio to the hilt in Jordan" and saw to it that Amateur Radio classes were instituted in elementary schools. King Hussein also dropped in on meetings of the Royal Jordanian Radio Amateur Society in Amman. King Hussein also was involved with the early satellite experiments.

Former US Ambassador to Lebanon and Iran Armin Meyer, W3ACE, also recalled Hussein February 8 in a letter to The Washington Post. Meyer said JY1 "has for decades been promoting peace and good will among quite ordinary people." As Meyer put it: "For the king, ham radio was a different world, a community of diverse people."

All members of the Jordanian royal family automatically have Amateur Radio privileges in Jordan. Although the new king does not appear to have a call sign, King Hussein's widow--the American-born Queen Noor--is JY1NH. King Hussein's brother, the former Crown Prince Hassan, is JY2HT, while his cousin, Prince Raad, JY2RZ, is chairman of the Royal Jordanian Radio Amateur Society.--Jennifer Gagne, N1TDY, supplied information for this report

WIRELESS PRIVACY BILL REINTRODUCED

The Wireless Privacy Enhancement Act of 1999, HR514, has been introduced by Rep Heather Wilson of New Mexico. The measure is aimed at amending the Communications Act of 1934 "to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes."

"HR514 is identical to the amended version of HR2369 that passed the House on a 414-to-1 vote during the last session," said ARRL Legislative and Public Affairs Manager Steve Mansfield, N1MZA. The Senate did not act on that measure.

The original bill, HR2369, would have banned most types of scanners and scanner listening; however, the bill's sponsor, Rep Billy Tauzin, worked with the ARRL and representatives of manufacturers, public service organizations, and scanner enthusiasts to redraft the bill top to bottom.

HR514 forbids manufacturing or modifying scanners to receive cellular, PCS, or "protected" paging service frequencies. The bill also forbids receiving, divulging, publicizing, or utilizing such communication. The measure is part of a package of legislation introduced early in the session in the expectation that it will pass quickly and help restore Congressional momentum.

Mansfield says, however, that the Senate prospects for HR514 remain murky.

While Amateur Radio appears to be unaffected by the new bill, the League is on record as opposing the expansion of prohibitions on radio monitoring beyond those that now exist to protect the privacy of services that interface with wireline networks.

The bipartisan list of co-sponsors of HR514 includes Reps Tauzin of Louisiana; Markey of Massachusetts; Oxley of Ohio; Eshoo and Rogan of California; Deal of Georgia; Wynn of Maryland; Cubin of Wyoming; Luther of Minnesota; Sawyer and Gillmor of Ohio; and Pickering of Mississippi.

A copy of the bill is available on the Web at http://thomas.loc.gov/cgi-bin/query/z?c106:h.r.514:.

HAMS HELP STAFF COLOMBIAN RELIEF CALL CENTER

Amateur Radio operators are helping to staff a Miami telephone call center for those seeking to get in touch with family and friends in the earthquake-stricken region of Colombia. A quake measuring 6.0 on the Richter scale struck January 25 in west-central Colombia's mountainous coffee-growing region. The quake killed upwards of 1000 people, injured thousands of others, and wreaked extensive damage.

Many of those staffing the call center are affiliated with the Sociedad Internacional de Radio Aficionados (Society of International Radio Amateurs). SIRA also helped mobilize Amateur Radio assistance in the wake of Hurricane Mitch, which devastated parts of Central America.

David Rosen, K2GM, of the Radio Readiness Group says continued spotty telephone service to the region has kept the call center busy since it started up February 2. Much of the traffic is directed to the city of Armenia, in the state of Quindio. Rosen said the center resulted from an AT&T request to the Radio Readiness Group and SIRA for help in furnishing information about the affected region to callers unable to get through by telephone.

Rosen credits SIRA President Rafael Estevez, WA4ZZG, with the idea of setting up a single location to receive incoming calls. With the assistance of AT&T, BellSouth of Florida, and the Florida Public Service Commission, twelve incoming lines were set up to the Colombian Information Center, available by calling 305-805-5550. Callers on AT&T who can't get through to the affected region in Colombia automatically get a recorded message referring them to the Colombian Information Center number.

SIRA volunteers are being assisted by members of the Kiwanis Club of Colombia, students from the University of Miami, the Colombia Disaster Fund, and the Radio Readiness Group.

Rosen said the center is getting dozens of calls seeking information about family and friends in the stricken communities. Call center volunteers then seek to obtain the requested information using Amateur Radio, the Internet, and other resources, and pass it back to the callers. "We are trying to enlist contact with as many hams in the affected area as possible," Rosen said.

Rosen said Amateur Radio continues to play a role in earthquake relief activities. Disaster-related traffic relayed on 20 and 40 meters has involved many stations in Colombia and the US. Rosen says he has received approval from the FCC on behalf of the US stations involved in the relief effort to operate SSB on frequencies between 7.050 and 7.100 MHz to maintain direct contact with emergency nets operating in that part of the band. "Having the ability to communicate directly with the Colombian nets on their own frequencies is much more efficient than working the HK stations crossband," he said.

Those wishing to assist with the Colombian Information Center are invited to call the Center at 305-805-5550. For more information, contact SIRA, at sira@iscnet.net or Dave Rosen, k2gm@contesting.com.

FCC CITES ILLEGAL SHORTWAVE BROADCASTERS

The FCC has sent violation notices to two hams who--the FCC alleges--had used their stations to engage in illegal shortwave broadcasting on 6955 kHz. The FCC also released the names of two nonhams notified last fall in the wake of similar, alleged operations. Cited were Henry L. Landsberg, WB6MEU, of Sierra Madre, California; Richard F. Jurrens, KC5RGK, of Katy, Texas; Roger R. Hanna, of Glendale, Illinois; and Christopher R. Lobdell, of Tewksbury, Massachusetts.

Official Notices of Violation went out to Landsberg and Jurrens on January 28. Both were cited for breaking the Amateur Service rules and given 10 days to tell the FCC how they plan to preclude similar violations in the future. Violation notices were sent to Hanna and Lobdell in November citing unlicensed operation. Their names were only recently made public by the FCC.

A letter to Landsberg from the FCC's Los Angeles office alleged that Landsberg operated his amateur station in violation of Sections 97.113 and 97.301 by broadcasting music last October 30 on 6955 kHz. The FCC's letter says the Commission used radio direction-finding techniques to track the source of a music transmission on that frequency to Landsberg's residence,

and that he admitted operating the transmitter on 6955 kHz. The broadcast is said to have consisted of Halloween music.

A letter to Jurrens from Oliver K. Long of the FCC's Houston office alleged that FCC agents "detected operation of a station identifying as 'Rock It Radio' on a frequency of 6955 kHz." The FCC used RDF techniques to determine that the signal was coming from Jurrens' residence. The FCC said that during a station inspection, Jurrens admitted that the signal had been transmitted from his station. A Technician licensee, Jurrens was cited for operating on a frequency not authorized by his amateur license.

FCC field office personnel said that Lobdell "neither denied or admitted" the alleged illegal operation on 6955 kHz late last October. Both Hanna and Lobdell reportedly refused FCC requests to inspect their radio equipment. They were cited for unlicensed operation.

The FCC letters to Hanna and Lobdell noted that civil penalties for unlicensed operation can reach $11,000 coupled with forfeiture of equipment used. Unlicensed operators also face criminal fines of up to $100,000 and could be sent to prison.

PSK31 GETS RAVES

Getting tired of the "same ol' same ol'" on HF? From the father of AMTOR, Peter Martinez, G3PLX, comes PSK31, a "live QSO" keyboard-to-keyboard mode that occupies a sliver of bandwidth and offers terrific performance even under weak-signal conditions.

PSK31 isn't new; it's been around for a few years, but no one really took much notice until Martinez developed free software that works with a PC sound card. Suddenly, PSK31 has become the latest HF fad. Unlike 'TOR modes, PSK31 does not use a synchronized linking--or handshaking--protocol to exchange error-checked data packets. Operationally, it's much like traditional 45-baud RTTY. PSK31 has shown itself to be a real trouper in weak-signal situations. Some hams experimenting with PSK31 claim that it outperforms all other amateur modes for weak-signal work--including CW. Indeed, PSK31 signals are easy to overlook on the bands. Most PSK31 activity is concentrated on 14.070.15 and at 3.580.15 MHz. You'll also find it on 40 meters at 7.035.15 MHz. On 15 meters, look for activity around 21.070 MHz.

To run PSK31, you need a PC that runs Windows that's equipped with a sound card. PSK31 software is available via the Web). Your HF SSB transceiver should be very stable and tune in 1-Hz increments. The connections between the radio and the sound card are very straightforward.

Several versions of PSK31 software are available as zipped files. The latest PSK31 software includes a couple of tuning aids that make finding and tuning signals much simpler. The "official" PSK31 Web site is http://aintel.bi.ehu.es/psk31.html, operated by Eduardo Jacob, EA2BAJ. The site also contains lots of information and links to other PSK31 and DSP-related sites, plus .wav files of PSK31 signals, so you'll know what to listen for.

W1AW Station Manager Joe Carcia, NJ1Q, has experimented with the new operating mode, PSK31, at the Maxim Memorial Station. While it took a bit of effort to get the equipment to function properly, he says initial results were quite good. Plans are in the works to add this mode to the complement of modes available for W1AW visiting operators.

Some have questioned whether the FCC permits hams to use PSK31. The answer is a definite "yes," although some confusion is understandable given the wording of Section 97.309(a) of the rules. Responding to an ARRL inquiry, the FCC amended the section in 1995 (Order DA 95-2106) "to clarify that amateur stations may use any digital code that has its technical characteristics publicly documented." PSK31 is publicly documented and widely available, but the ARRL in late January took the additional step of specifically documenting the technical characteristics of both PACTOR II and PSK31 in a letter to the FCC.

SOLAR UPDATE

Solar prophet Tad Cook, K7VVV, Seattle, Washington, reports: Last week, we noted the January 30 sunspot number was only 29, a low point not reached since October 4, 1998, when it was 21. This week, we report another low in solar activity. On February 6 the solar flux dipped below 100 to 99.3. It has not been this low since July 18, 1998 when it was 99.2. This is unexpected in this part of the solar cycle, which should be rising.

This lower activity has a negative effect on propagation in the upper HF bands. As an example, if one runs the predicted numbers for February 13 on a popular propagation prediction program, for a path from the mid-US to Japan it shows 15 meters with strong signals from 2130-0230 UTC, 12 meters from 2200-0100 UTC, and 10 meters from 2200-0000 UTC. But plug in the numbers for February 6 over the same path, and it shows only a weak opening around 2230 UTC on 15 meters.

Fortunately that quiet portion of the sun has drifted past, and the predicted solar flux for the next few days is much higher. The solar flux for February 12-14 is expected to be 170, 175 and 175. The planetary A index is predicted to be 12 for those three days. Conditions should be good for the World Wide RTTY WPX Contest.

Beyond the weekend expect solar flux to drop below 170, then below 160 by February 20, and below 140 after February 23. Solar flux should start creeping higher again after the beginning of March.

Sunspot numbers for February 4 through 10 were 20, 15, 27, 36, 75, 57, and 69, with a mean of 42.7. The 10.7-cm flux was 107.3, 103.7, 99.3, 109.5, 124.5, 129.3, and 152.4, with a mean of 118. The estimated planetary A indices were 7, 8, 12, 12, 5, 5 and 6, with a mean of 7.9. (Editor's note: Contact Tad Cook, K7VVV, at k7vvv@arrl.net.)

J. A. "DOC" GMELIN, W6ZRJ, SK

Former ARRL Pacific Division Director Jean A. "Doc" Gmelin, W6ZRJ, of Los Osos, California, died February11, 1999. He was 71 and reportedly had suffered a recent stroke. An ARRL Honorary Vice President, Gmelin, was

Pacific Division Director from 1968 until 1978. He also had served as an assistant Pacific Division director, as Santa Clara Valley Section Communications Manager, and as an Assistant Section Manager for public service and external relations in Santa Barbara.

First licensed in 1947, Doc Gmelin was a Life Member of the ARRL and a member of QCWA. He also was a member and past officer of several California clubs. He was a member of the A1 Operators Club and had been active in RACES. He contributed feature articles to QST and was a columnist for Worldradio magazine.

Pacific Director Brad Wyatt, K6WR, reports that a combined Amateur Radio and Masonic memorial service will be held Sunday, February 14, 2 PM PST, at the Los Gatos Memorial Cemetery, Los Gatos-Almaden Road, Los Gatos, California.

Gmelin's wife, Caroline, K6BGM, is among his survivors.

IN BRIEF:

* This weekend on the radio: The North American Sprint (CW), the YL-OM Contest (SSB), the WorldWide RTTY WPX Contest, the PACC Contest, and FISTS Novice Roundup (see below) are February 12-15. Just ahead: The ARRL International DX Contest (CW) is February 20-21. See February QST, page 91, for details.

* FISTS Novice Roundup: The 1999 Novice Round-Up, sponsored by FISTS CW CLUB, starts Friday, February 12, 1700 UTC, and ends Monday, February 15, 2359 UTC. Traditionally, the Novice Round-Up promotes CW contacts with Novice stations. Only QSOs made in the Novice/Tech Plus CW band segments will be valid. Novice/Tech contacts count 5 points; non-Novice/Tech QSOs count 2 points. Exchange: call sign, name, RST, license class, and QTH. Multipliers are US states (total=50). Scoring: Claimed score = (the number of Novice/Tech CW QSOs x 5) + (the number of non-Novice/Tech QSOs x 2) x the number of multipliers (states) worked. Certificates go to the top-scoring Novice/Tech and non-Novice/Tech. Winners get a year's membership in FISTS CW Club. Entries: Mail logs, summary, and check sheets to Novice Round-Up, c/o Dennis Franklin, K6DF, 4685 Capitan Dr, Fremont, CA 94536-5448. Entries must be postmarked by March 16, 1999.--Dennis Franklin, K6DF

* Guides on the Air event: You can help young women to learn about Amateur Radio by participating in the Guides on the Air (GOTA) event, February 20-21. Although this event originated in Canada, it is spreading to the US. Invite a few Girl Scouts, or the whole troop to your shack that weekend. GOTA stations will be using all HF bands plus 2 meters, on frequencies that end in "33" and "88." US Girl Scouts who participate may earn the Ham Radio patch. For information on obtaining these patches, contact Arline Berry, W1LIO, 6 Causeway Ln, Medfield, MA 02052; w1lio@juno.com.

* Vanity Update: The FCC in Gettysburg reports it has processed vanity call sign applications received through January 25. On February 10, the FCC granted 252 call sign requests. Another 284 landed in the work-in-process

(WIPs) stack.

* Morse featured on NPR talk program: The continuing use of Morse code among the Amateur Radio community as CW is phased out for maritime use was featured on National Public Radio's Talk of the Nation, Science Friday. The ARRL's Jennifer Hagy, N1TDY, worked with NPR staff to secure interviewee Les Kalmus, W2LK, for the live, half-hour talk show. Members who heard the show report that Amateur Radio was shown in a very positive light and that callers interested in getting their ham radio licenses were referred to the ARRL. The program is available via RealAudio at http://programs.npr.org/archives/totn/scifri.cfm

* FCC closes unlicensed Florida radio station: The FCC, in conjunction with the US Marshal Service and the US Attorney's Office, seized radio transmission equipment used in the operation of an unlicensed FM radio station in Palm Beach Gardens, Florida, on January 15, 1999.--FCC Daily Digest

* HAARP listening test set: The High Frequency Active Auroral Research Program (HAARP) facility in Gakona, Alaska, will conduct a second HAARP Listening Test in mid-March, seeking reports from hams and SWLs in Alaska and in the "Lower 48." Exact times and dates are not known at this time, but will be announced as soon as they are available. Transmissions will be on or near 3.4 MHz and 6.99 MHz. HAARP will send a CW message and request signal strength reports. QSLs will be available only for reports mailed to HAARP, PO Box 271, Gakona, AK 99586.--HAARP

* Changes at Agrelo: Effective immediately, Agrelo Engineering of Pattersonville, New York--manufacturer of the DF Jr direction-finding unit--says it has appointed SWS Security of Street, Maryland, as exclusive distributor for Agrelo's DF and transmitter products. "SWS will be responsible for all sales and technical support for these items and will be setting up the dealer network, handling advertising, and all other responsibilities," say a statement on Agrelo Engineering's Web site, http://www.agrelo.com. Agrelo President Joe Agrelo, N2OOC, apologized for problems with delivery and support of Agrelo Engineering amateur products and says his company in the future will concentrate on the commercial market and "divest ourselves of sales and support" for its amateur line. In business since 1972, SWS Security is run by Steve Uhrig, WA3SWS, whom Agrelo described as "a ham, an experienced international businessman and a designer of professional DF systems." Agrelo asked for the amateur community to be "patient" during the transition. He said any product or service "still owing as of November 1998" would be shipped from Agrelo "as time permits," but that all inquiries should go to SWS, 1300 Boyd Rd, Street, MD 21154-1836; tel 410 879-4035; e-mail sales@swssec.com; http://www.swssec.com. SWS says it is now taking orders for Agrelo products. Agrelo said SWS would be releasing upgrades, options, and enhancements to the DF Jr as well as new accessories and complete DF systems.

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax

860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective immediately. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays).

For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

Different strokes for different folks, Alan. I hope you are not advocating
the death of CW. Would you advocate the death of antique cars? Would you
advocate the death of walking through the woods? Would you advocate the
death of hand-tilled gardens?

I hate the CB band for what it has become but CB would be you best bet
in hilly terrain,especially a sideband radio.Of course if you get a
license and there is a repeater nearby ,or you could use 10 meters.AB7RS

You will get better results if you ask this question in r.r.a.antenna.
BTW, you need to qualify what you mean by "best" antenna. For what
band(s), how much vertical/horizontal space do you have available. Power
level? What operating style do you have (stateside, DX, contests, etc.)
There is really no such animal as a single "best" antenna.

As much as I dissapprove of monitoring/taping cellular telephone calls, the people who did it to Newt weren't wiretapping. Where's the wires? That's why new laws are needed.

I have to step in here and recommend that all parties read the article "The Property Status of Airwaves" in Ayn Rand's "For the New Intellectual".

The solution to your hetrodyne problem of stations piling up is to treat airwaves like private property. If someone infringes, you sue them in court. As with our real property, we don't accept trespassers, do we? Hell no! We call the police, and/or sue the interlopers.

Like I said:

>> > To the gullible masses: Please go learn what your Constitutionally
>> > protected rights are before flaming me on account of your ignorance.

(I predicted there would be contempt/ignorance shown for the real Law.)

As far as alternatives for coordinating communications conducted by
private individuals, amateur band repeaters are coordinated by private
frequency coordinating committees. There can be accountability without
making government lord and master. If you say government must always
do these things, I say you worship big government.

I understand your position, but how would anyone decide who owned what
frequencies? Isn't this position at odds with the usual "Free Radio"
position that the whole electromagnetic spectrum belongs to everyone? I
still maintain that an oversight organization is needed as a
coordination mechanism and as an enforcement body. It is being

suggested that informal frequency coordination committees be used for frequency allocation, but if these organizations have only advisory power, there is no compelling reason for anyone to listen to their recommendations. There are always plenty of people willing to take advantage of such loopholes. I am not in favor of big government, but I'm also not in favor of anarchy.

I think I would like to see unlicensed use on a non-interfering basis of transmitters having up to about a half watt meeting spectral purity standards similar to amateur standards, with non-interfering basis meaning not resulting in a degradation of reception of any licensed station. I would also like to see a 1 to 100 watt class of licensed station, with a streamlined frequency assignment and licensing procedure. The proposed micro-broadcasting rules aren't exactly what I would like to see, but they are better than nothing. But unlicensed use of up to 100 watts on an "unused" frequency? Do you realize how cheaply a 100 watt FM transmitter could be mass-produced? There would be a million of them out there. "3 Meters" would be shot all to hell. It would be like CB on a really bad day in a really bad area. Any non-interference rules would be totally unenforceable. A 100 watt 3 meter FM transmitter can easily be built to mobile size. I mean EASILY. Mobile ops would wander around at will, trashing others' enjoyment of their favorite stations. The present day pirates would even fall victim to the new breed of unlicensed FMers. Bummer.

Part 15 compliant transmitters are of such limited utility that they are almost useless. (I think that was part of the intent) but a half watt, trust me on this... with a vertical dipole or better yet a J-pole up high and clear, will effectively cover many blocks, on a clear frequency. And a half watt in the hands of an irresponsible operator would not create the problems that a 100 watt station would.

Do you want more variety on your local radio waves? Reb. Billy Tauzin doesn't want you to!

>Representative Billy Tauzin of Louisiana said the Federal Communications Commission plan for so-called microradio would reduce the audience and

advertising revenue of current stations and possibly create severe interference.

>The FCC "is an agency out of control that demands congressional action to straighten it out," Tauzin said at a luncheon meeting of the National Association of Broadcaster's group of top radio executives.

(quoted from Wired on-line)

Tauzin is the one who needs straightening out! I suspect Billy Tauzin is more beholden to NAB lobbyist dollars than he is to the American people. "Microradio" is a terrific idea that should be implemented immediately.

Here's how I would implement a "microradio" plan:

* Any unused FM frequencies will be allotted to NON-COMMERCIAL applicants who pay a nominal fee (let's say under $100 a year) for the right to broadcast up to, let's say 1,000 watts.

* Ultra microradio stations (let's say under 100 watts) can broadcast on unused frequencies without a specific frequency permit.

Both types of broadcasters are required a lifetime license by passing a test, just like ham radio. In fact it would be a form of amateur radio license, governed and administrated by the current ham radio system. The fee is minimal, let's say $50. The test will mostly cover broadcast rules and a pledge to obey them. (Two-way communication is also forbidden since there are lots of ham band for that.) The test fees will go to local ham radio clubs who will be given the task to monitor and enforce on-air behavior in their area.

* Commercial full-fee paying stations can "bump" any microstation when they get their permit.

* The lower and upper end of the FM band will be extended and remain unallocated so that urban microstations will have room to broadcast. In full band urban areas, only "ultra microstations" will be allowed to broadcast.

Besides scaring the NAB, what could a microradio system like this possible harm? An occasional interference maybe, but not much more. Nothing is stopping those same people from doing "pirate" broadcasts now. But the benefits for Americans is legion:

1) A wider variety of music in non-commercially viable areas i.e. classic music in rural Montana. alternative rock in North Dakota, polka in Southern California, etc. etc.

2) A rural voice: you would get lots of "ma and pa" folksy radio stations in rural areas just like in the golden age of radio: weather reports, recipes, piano recitals, community announcements, high school sports broadcasts, etc. etc. It would really bring a rural town together.

Besides individuals' schools, clubs and civic groups could do public-service broadcasts. Some groups would broadcast tape-loops of community announcements of bake sales, road closures, city council meetings, etc.

3) A voice to religious and political groups. Some churches would broadcast non-stop sermons while right-wing wackos would have endless call-in shows to voice their paranoia. Giving people like this a voice in media is a great way to let them release steam.

4) Cool rebroadcasts. I'm sure some people would pull in stations from short-wave or satellite and re-broadcast them on FM. Since this is strictly non-commercial the rebroadcast would be of things like the BBC, NPR and other good stuff. In the end, the public would be better informed.

The NAB is just greedy. They love their monopoly and refuse to share it, even with people who loose money doing community service broadcasting. As long as microradio is strictly non-profit (and, thus, a money loser) there won't be a flood of stations. Like CB radio, there will be an initial wave of interest but it will quickly die down. C.mon NAB, lighten up!

MICROSTATIONS NOW!
The NAB doesn't own the radio waves' the American people do.

Sincerely,
Curtis

Subject: Morse Code in Music
Date: Sun, 10 Nov 1996 20:48:59 GMT

Morse Code in Music

While listening to your favorite music, don't be
suprised if you hear those strange and annoying
sounds of that terrible Morse code!

Case in point, on Joe Walsh's solo album
"Songs for a Dying Planet" is a song titled
"Vote For Me". The song is preceded with Morse
code which pounds out "REGISTER AND VOTE FOR ME AR".
Brian, KF2HC, states that the same message appears
on Joe's first album "Barnstorm" in a song titled
"Mother". Joe holds an Advanced class Amateur license.

Another album worth noting is Roger Waters' album
"Radio Kaos". This album is filled with Morse messages.
Most of the code is underlying the haunting music and
very difficult to copy. The album's cover is littered
with Morse code characters. The album's song titles are
all spelled out in Morse Code!

The rock band RUSH has a song title "YYZ" on their album
"Moving Pictures". This songs starts out with heavy
percussion belting out "YYZ" followed by bass and
guitar blaring out the same. Well, the characters YYZ are
the beacon identifier for the Toronto International Airport.
The inspiration for the song came from Alex Lifeson, the

guitarist for the band, who holds a private pilots license.

Carter Bennett, KI5SR, adds that there is badly formed
Morse code on Kate Bush's album "Hounds of Love".
Carter informs me that the song "Watching You Without Me"
contains the code "SOS". It was also reported that this
track has some RTTY going in and out of tune. KI5SR continues
with information regarding the album "Saving the Wildlife"
by Mannheim Steamroller. He states that there is a track
on the album which sounds too much like "CQ" in Morse.

Charlie, N2JQA, says that there is Morse Code on
Ronnie Montrose's album (Elektra 1982 EI-60034) "GAMMA 3".
The song "Stranger" contains Morse Code which spells
"STRANGER".

Wayne, WA6MPG, states that in 1967, the band
"PEARLS BEFORE SWINE" recorded a song with an adult-rated
CW message in it. The song was titled "MISS MORSE".
The song is said to have vulgarities in it spelled out
with Morse Code. The album was titled "ONE NATION UNDERGROUND".

Randall, KE0YG, provided the following info about Morse Code
in the computer game called "RED STORM RISING" by Microprose.
Randall says that in the opening credits there is music
which contains Morse Code which spells out
"THE RUSSIANS ARE COMING" at about 18 WPM.
Randall says that he can confirm this on the C-64 version
and he believes that the IBM version plays the CW message
in the theme song.

Craig, VK3CRA, reports a TV show called "INSPECTOR MORSE".
Craig has never seen the show but, from info gathered, states
that the inspector's name is never given in the show. It is
alleged, however, to be contained in Morse Code which is played
as part of the show's introductory music.

Howie, N2WX and Mark, KM6XU, claims that "Radioactivity" by
Kraftwerk has lots of good Morse code in it. Mark also states
that the band Missing Persons has a song with some code in it
but Mark didn't supply any info on the song.

A message from John, NI6D, says that there is pseudo Morse
code in the song "Radio Silence" on Thomas Dolby's album
titled "The Golden Age of Wireless".

Dave, N0DET, adds that there is code in the song
"Planet Claire" by the B-52's. In the intro to "Planet Claire",
a kind of Spy vs. Spy mood is created by the music,
and plainly audible CW. The Morse code says,
"NAKS DE CFH I I ZKR F13395 5156 AS 662 ....,", then fades
to music. Dave believes that 'NAKS' and 'CFH' are
commercial station callsigns.

More information pertaining to the code comes in from Ron, VE3RYN. Ron says that "NAKS" should be "NAWS" which stands for 'North Atlantic Weather Station' and "CFH" is a CDN military ship/shore station located near Halifax, Nova Scotia.

Michael, W9OJ, claims that the words "love you" are spelled out in morse code at the end of the "Iron Butterfly Theme" Iron Butterfly. This song is on their first album "Heavy" and is also on the double album titled "Rare Flight".

Ian, VK2IAQ, writes in with information stating that the UK rock band 'Barclay James Harvest' has two songs which contain morse code. Ian states that the song "Nova Lepidoptera", a sci-fi song from the 1977 album "XII", starts off with "UFO" repeated in slow morse code. Also, the title track of the album "Ring of Changes" starts with the title sent twice in morse code. John Lees, the lead guitarist, is a licensed amateur operator in the UK.

Bill, WA6ITF, reports some really good Morse code on the CD "SEEK YOU" by Andrew, G3WZZ, and Lissa Huddleson.

Well, that's about it for now. Thanks to all who have provided me with information on this subject es thanks to all who have inquired abt the subject.

3555. Well, they got me.

Well Gary, in general I agree with you. The US laws are really something else.

BTW, I was not advocating breaking the law. In my previous message I suggested applying for a special experimental permit (I am sure such things exist there), as a way of getting on the air.

Here things are more relaxed, and the special permit can often be (in my experience) nothing more than "well, we've noted your callsign, so you just go ahead - let us know how you get on - if there's any trouble we'll let you know!"

Long term, I acknowledge that the silly rules do need to be changed, but unfortunately, even with the most vigorous lobbying, that won't be overnight.

73,

Murray ZL1BPU

have a look at the program"yagimax" available at:
http://web.inter.nl.net/users/AT.Holland/software.htm
& many other places.

I have used it to evaluate several 5 element yagis & it seems to give reasonable results (comparable to expected performance). It runs on a PC.

If anyone is interested, I can post dimensions of one of these designs. All you have to do then is start tinkering. Yagimax can do some simple optimisations.

If you ask the average American, they would describe ham radio operators as "strange", or "wierd." They would ask questions like "Why do those guys wear caps with rubber antennas?", "why do they annoy others by using their radios inside a restaurant to talk to their friends in the car outside?", or "why don't they just talk like normal people on their radios?"

>Come to think of it, even the Stumpjumpers are one up on you, they at least

This was so rich, I couldn't resist. Special Thanks to Art Bell for the CEUS site...

Dear Governor _____,

Please let this letter serve as notice that I, as a citizen of the State of _____, am hereby making demand that you, as the head of the State of _____, call upon the Federal Government, pursuant to Article 4, Section 4, of the United States Constitution, to protect the citizens of this State from an invasion which is currently taking place within the jurisdiction of this State.

This invasion is two-fold:

1.Unidentified, unknown, and technologically advanced craft infringing the skies of this State. These craft take the form of triangular, "v", or delta shaped aerial objects. Affidavits are available from citizens who have witnessed these craft. See Citizens Against UFO Secrecy v. Department of Defense, CIV 99 0108PHX SMM United States District Court for the District of Arizona.
2.A non-volitional physical contact between the citizens of this State and unidentified, unknown, and apparently non-human beings. Affidavits are available from citizens of this State who are victims of this non-volitional contact. See Citizens Against UFO Secrecy v. Federal Bureau of Investigation, et. al. (to be filed in the United States District Court for the District of Arizona, in March, 1999.)

Please be advised that you have 30 days from the receipt of this demand to notify me of the action you intend to take. In the event I have not received a written response within said time, I will have no alternative but to commence legal proceedings.

Yours truly,

did
:well.

That's right! When Saddam ripped Kuwaits heart out and waved it in Jordan's face King Hussein didn't have many options and what he choose was neutrality, you can't call that opposition. Also, if people think the Gulf War is all that matters as to his character that's only the tip of the iceberg. He had for decades been ruling and for the most part Jordan has been very, very well regarded as part of the global community. Only real mistake was in the events of the Six Day War, Jordan took huge losses but he managed to build his country with real class. Also, Jordan is considered to be the best Middle-East country from the standpoint of human rights.

3579. Microradio Now!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-12 00:00:00 UTC
From: Curtis Hickerson <reason@usa.net>
Message-ID: <3.0.5.32.19990212111613.007be100@pop.netaddress.com>
Source record: 150806
Cross-posted to: alt.politics.clinton,alt.religion.broadcast,rec.radio.amateur.misc,alt.radio.pirate

Do you want more variety on your local radio waves? Reb. Billy Tauzin doesn't want you to!

>Representative Billy Tauzin of Louisiana said the Federal Communications Commission plan for so-called microradio would reduce the audience and advertising revenue of current stations and possibly create severe interference.

>The FCC "is an agency out of control that demands congressional action to straighten it out," Tauzin said at a luncheon meeting of the National Association of Broadcaster's group of top radio executives.

(quoted from Wired on-line)

Tauzin is the one who needs straightening out! I suspect Billy Tauzin is more beholden to NAB lobbyist dollars than he is to the American people. "Microradio" is a terrific idea that should be implemented immediately.

Here's how I would implement a "microradio" plan:

* Any unused FM frequencies will be allotted to NON-COMMERCIAL applicants who pay a nominal fee (let's say under $100 a year) for the right to broadcast up to, let's say 1,000 watts.

* Ultra microradio stations (let's say under 100 watts) can broadcast on unused frequencies without a specific frequency permit.

Both types of broadcasters are required a lifetime license by passing a test, just like ham radio. In fact it would be a form of amateur radio license, governed and administrated by the current ham radio system. The fee is minimal, let's say $50. The test will mostly cover broadcast rules and a pledge to obey them. (Two-way communication is also forbidden since there are lots of ham band for that.) The test fees will go to local ham radio clubs who will be given the task to monitor and enforce on-air behavior in their area.

* Commercial full-fee paying stations can "bump" any microstation when they get their permit.

* The lower and upper end of the FM band will be extended and remain unallocated so that urban microstations will have room to broadcast. In full band urban areas, only "ultra microstations" will be allowed to broadcast.

Besides scaring the NAB, what could a microradio system like this possible harm? An occasional interference maybe, but not much more. Nothing is stopping those same people from doing "pirate" broadcasts now. But the

benefits for Americans is legion:

1) A wider variety of music in non-commercially viable areas i.e. classic music in rural Montana. alternative rock in North Dakota, polka in Southern California, etc. etc.

2) A rural voice: you would get lots of "ma and pa" folksy radio stations in rural areas just like in the golden age of radio: weather reports, recipes, piano recitals, community announcements, high school sports broadcasts, etc. etc. It would really bring a rural town together.

Besides individuals schools, clubs and civic groups could do public-service broadcasts. Some groups would broadcast tape-loops of community announcements of bake sales, road closures, city council meetings, etc.

3) A voice to religious and political groups. Some churches would broadcast non-stop sermons while right-wing wackos would have endless call-in shows to voice their paranoia. Giving people like this a voice in media is a great way to let them release steam.

4) Cool rebroadcasts. I'm sure some people would pull in stations from short-wave or satellite and re-broadcast them on FM. Since this is strictly non-commercial the rebroadcast would be of things like the BBC, NPR and other good stuff. In the end, the public would be better informed.

The NAB is just greedy. They love their monopoly and refuse to share it, even with people who loose money doing community service broadcasting. As long as microradio is strictly non-profit (and, thus, a money loser) there won't be a flood of stations. Like CB radio, there will be an initial wave of interest but it will quickly die down. C.mon NAB, lighten up!

MICROSTATIONS NOW!
The NAB doesn't own the radio waves the American people do.

Sincerely,
Curtis

I have the following equipment for sale and/or trade.

*****SOLD***** Icom IC-25A 144MHz FM Transceiver
Frequency Coverage: 143.800-148.195MHz
Output Power: 25W(High), 1W(Low)
Good condition. Works great! Comes with manual.
$75.00 shipped

6' Equipment Rack
Standard 19" wide rack. Large cooling fan mounted on top.
Great shape! On wheels!
Pickup or delivery only. Will deliver withing 25 miles of Lake Villa, IL.
If you have and idea for shipping arrangements, please run them by me. We might be able to strike up a deal.
$425.00

Siemens Programmable Logic Controller
Two Power Supplies, One CPU, One Handheld Programmer, One Digital Input Module, Two Digital Output Modules, Three Bus Modules.
No, this does not program radios. It has a series of inputs and outputs. Once programmed, it will monitor the inputs and will turn on and off the specific outputs.
$150.00

Sony Hyper HAD Color Video Camera
Excellent condition! Comes with 24VAC Power Supply.
$250.00

I am looking to trade for the following:

Kantronics KAM+ TNC

Icom CT-17 RS-232 Level Converter

Vertical HF Antenna

If you have something else you would like to trade, please tell me and I might just want it!

You can e-mail me or call me by telephone.
E-Mail - zman@iwc.net
Telephone - (847) 587-0551 - I have voice mail, so if I'm don't answer, leave voice mail. I'm usually here, but sometimes I'm too busy to answer.

Thank you,
Christopher Zeman, KB9RHA

I didn't get the government flyer, but I have been waiting for almost a month for parts and accessories for my laser printer to come in the mail. It should have been a three-day shipment. Yesterday I called, and they said it hadn't been shipped yet because they were in the process of switching over to a Y2K-compliant system.

We'll never actually know whether the so-called Y2K bug would have been widespread enough to cause problems, but the cure sure will be. How ironic.

If you and the FCC want unpaid volunteers to help out in a communications emergency, you'll lower the cw test to 5wpm or eliminate the cw test for meaningful HF access. MARS doesn't seem to mind that I have been tested at only 5wpm, and furthermore they no longer have cw nets. They want to go digital on HF. You guys always want something for nothing. I'll bet you're from the Roosevelt Era. A chicken in every pot.

There are a few holes in your proposal, but it seems like something like
this may be in the works. For example, how could your "ultra-micro" 100
watt stations operate in full-band urban areas without interfering with
licensed commercial broadcasting? With no licensing for that class at
all, what sort of accountability would exist? A second problem is your
proposal of using local amateur radio clubs for monitoring and

enforcement. This is completely infeasible -- for one thing, such informal clubs can have no enforcement authority, and there it is unlikely that volunteer broadcast monitoring service would be of interest to many hams.

Wrong. You lose what little credibility you still possess when you
make false declarations about another individual's beliefs. There are
still some government statutes that square nicely with Biblical
statutes, and I certainly *do* believe in the legitimacy of those.

He subscribes to a higher law which he can interrupt any way
>he chooses to suit his own needs.

The law I ascribe to, natural law, cannot be truly interrupted.
It can only be challenged, and usually with dire consequences.

He just dosen't realize that in the
>real world it dosen't work that way.

That's what you think. Just wait and see how your life will
change, as a result of man's attempts to fool Mother Nature.

Hmm.. Who would I contact concerning such?
The city? County? FCC? I live in the DFW area, and 'looking to' put one up.
I seem to recall there being a 50ft restriction with the CB antenna I used
to have, but I can't remember if that was a CB-only 'thing' or.... And what
about 'towers' vs poles? Since the tower would
'stick out' (be more visible to the complainers) more, would there possibly
be laws against those that I'd need to look/check for?

Thanks!

PS. I've heard quite a few people talking about how they'd like to move out
into the country and put up a 100ft tower.. Why limit it to 100? Seems to be
a pretty popular height to dream about, for some reason.. It wouldn't cost
any more to go from 100 to 150, or whatever, than from 50 to 100, would
it?... I'd like a 300ft'r, btw.. ;)

3601. Heathkit GC-1A SW Rcvr vs Today's Stuff?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-13 00:00:00 UTC
From: Wayne Watson <mtn_view@sirius.com>
Message-ID: <36C6056B.7A2510A@sirius.com>
Source record: 150628

Anyone know how an old Heathkit GC-1A SW rcvr bears up against current technology. I've had it for about 30+ years and use it a few times a year. I bought it in the non-kit form. I'm very likely to finally get around to obtaining a tech license in the very near future, and have just begun looking at equipment again. I can see it has easily changed a lot in recent years. :-) Who knows maybe my old GC-1A may come in handy somehow.

Yes it would. You would need more real estate to lpcate the guys. You would need more, and heavier guys, anchors would need to be engineered for higher loads, the erecting ropes would need to be longer, etc.

Ooh, I want in on this. But lets make it real communications.
To count as a QSO, at least 25 lines of text, 80 characters to
the line, must be exchanged with each station. I won't choose
CW.

3609. Capacitor HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-13 00:00:00 UTC
From: "William S. Friedlander" <williamf@pressenter.com>
Message-ID: <36C659B7.1DE6@pressenter.com>
Source record: 150636

In my lamp dimmer device a small capacitor has shorted out. This capacitor shunts across the triac. And I assume is to reduce RFI.

Anyway the capacitor is marked "2E473K".

Can anyone tell me what is the capacitance value, voltage rating, etc. that this designation is indicating. (My last issue of the ARRL handbook is 1990 and it doesn't cover this particular labeling.)

Thanks in advance for any help!

Source record: 150668

Hi Gary. Thanks for your answer.

The recovery time is not long. If the PL is off, I ear the repeater as soon as I let go the PTT. It does not have any delay at all. I only have that delay when the CTCSS is active in receive mode. On my favorite repeater, there is a 100Hz tone and as I said, it takes a big 1 to 2 seconds before the squelch opens by itself after a transmission.

Francis VE2FGS
ve2fgs@videotron.ca

Gary Coffman a crit dans le message
<36cacafd.134967265@news.atl.bellsouth.net>...
|On Fri, 12 Feb 1999 11:18:05 -0400, "Francis" <ve2fgs@videotron.ca> wrote:

|I understand that. Out of curiosity, how long does it take the receiver to
|recover after a transmission with CTCSS turned off? This may be a
|receiver recovery time problem that's made worse by the addition of
|the CTCSS decode time.
|
|What I'm trying to discover here is the source of the delay. Since you
|say that CTCSS squelch works properly when you haven't just transmitted,
|it doesn't sound like CTCSS decode itself is excessively slow. If receiver
|recovery after transmission is slow, however, it'll take longer when the
|CTCSS decoding delay is added to the receiver recovery time. (Obviously,
|the receiver has to recover before the CTCSS decoder can *begin* decoding.)
|
|CTCSS decode time is a function of the tone frequency. For example,
|a 100 Hz tone requires a minimum of 1/100th of a second to decode, a
|67 Hz tone requires a minimum of 1/67th of a second to decode, etc.
|(So it should be obvious that the higher CTCSS tones should decode
|faster than the low ones.) Depending on the amount of anti-falsing
|designed into the system, the delay can be several times that minimum.
|So CTCSS always adds a delay to squelch action. If in addition the receiver
|adds several hundred milliseconds of recovery time, the delay could become
|very excessive as you report.
|
|If the receiver does recover slowly, then suspect that receiver rail
voltage
|may be recovering slowly, or that PLL lockup time is slow, etc. But if the
|receiver with CTCSS decode turned off recovers quickly, then the problem
|can be a bias in the CTCSS decoder or a system logic delay. A bias
(saturation
|at one rail) can be the result of a faulty coupling capacitor. A logic

delay can be
|the result of a slow logic rail recovery problem (might be a regulator or
capacitor
|on the logic supply rail). You could even be suffering from a bit of RF
feedback
|in the unit.
|
|It would be useful if others would report whether receiver squelch on their
units
|is slow in the situation you describe so we can determine if it is a design
problem,
|or just a component fault in your particular radio.

You clearly are more familiar with North and Youdon than I.
But I can't understand why anyone would base their opinions
on the Y2K situation upon the personalities or foibles of
anyone, whetbher or not they are self annointed experts.

I base mine, rather on what seems likely or unlikely, given
what I can find out about the specifics involved, namely-

What are the possibilities that a significant portion of
the software driving critcal applications can/will cause
serious problems because it has not been identified as a
problem area, or having been identified, has not been
corrected?

The missing answer to this question is what I find
troubling. No one seems to know the extent of the
possibilies. Some sources say that many embedded processors
and software systems are obscure and can't easily be ID'd or
checked for vulnerability. So how could anyone be very
confident in predicting what will or won't occur?

We shall see it this turns out to be the Achilles heel of
the 20th century technological explosion. We all hope it
turns out to be a tempest in a teapot.

Hey, does anybody have any experience with the AN/PRC-138 radio by Harris? I'm looking for the most rugged radio available that can be used for emergency communications as well as general hamming while DXpeditioning. The ideal radio would TX and RX 1.6-500Mhz, but so far that seems unrealistic. The AN/PRC-138 seems like it would fit the bill for HF-6M operation, which is what I would use most of the time anyway. From what I gather, it's perfectly suited for data transmission, email etc. It'd be nice to have VHF/UHF for satellite work, but I suppose I could get a Yaesu FT-847 along with the AN/PRC-138 to pick up the slack. Does anybody have experience with PRC-138's? pros/cons or general suggestions? I have been able to find very little information about it, and Harris doesn't seem to know how to read email. Anybody know about it's price?

While I'm on this topic, I might as well ask about the FT-847 and Icom's IC-706 series (maybe the FT-100, when it comes out). Does anybody know how tough these radios are? My impressions, just from the pathetic photos that the manufacturers provide, it looks like the 706 is the tougher of the bunch. I've seen at least one complaint in the newsgroups that the 847 is too "plasticy". It doesn't really look very tough and I'd bet a misplaced cup of coffee would be enough to put it out of business. Does anybody know how much of a difference a special custom made container could improve it's ruggedness? I would think that if the circuit boards and solder-pads are cheap to start with, a good jolt in a padded case or out of a padded case wouldn't make any difference. I'd still have to find all the parts that came away from the PCB's. I guess I can't really operate the radio if it's snuggled away behind 6 inches of foam rubber anyways so maybe I'd better get a radio that's invincible to start with...

What do people (non-amateurs) think of when you say "ham radio"?
A guy sitting slumped over a radio 'tapping' to someone thousands of miles away... I wonder how many "hams" purposely mislead people by letting 'em think their no-code license makes them one of those guys?
I usually say I have a "no-code ham license" just to let people know I'm not YET able to be what they 'connect' that word with.
(talk about a great way to start a conversation, btw.. Most people aren't interested in "ham radio," but they do wonder why I'm not yet good enough to be a "ham," and.....)
And I only say "ham" because even fewer people seem to have any idea what "amateur radio" is.

--------------------------------------------------------------------------
Richard, I have two of them from 1978. They always worked fine. I
went down to the local radio-control flying field in the early 1990s,
and the club told me the FCC had recently mandated the use of
narrower-band transmitters and changed the channel frequencies so as to
place the Heathkits between current channel frequencies. Too bad. But
I remember they performed flawlessly.

Good luck- Tom K4AKC

Ok, but it opens normally when you haven't just transmitted. So it looks
like receiver recovery is Ok, and the CTCSS decoder is Ok under normal
monitoring conditions. That leads to the possibility that the CTCSS decoder
is slow in recovering bias after a transmission. And that probably means
a faulty coupling capacitor (or perhaps RF feedback) is driving the decoder
out of its operating range during transmissions. As a quick first look, I'd
open it up and look for a loose ground to eliminate the RF feedback
possibility. Then I'd scope the CTCSS decoder input and look for a DC
bias shift that shouldn't be there when you release PTT.

>Anybody know about it's price?

If you have to ask, you can't afford it. And you can't take it out of the country
without a special permit. It is on the restricted list. (It isn't all that hot as an
amateur radio anyway. That's not its primary design goal.)

>While I'm on this topic, I might as well ask about the FT-847 and Icom's
>IC-706 series (maybe the FT-100, when it comes out). Does anybody know how

>away from the PCB's. I guess I can't really operate the radio if it's
>snuggled away behind 6 inches of foam rubber anyways so maybe I'd better get
>a radio that's invincible to start with...

The vulnerabilities of both the IC-706 and the FT847 to mechanical blows
would be primarily due to the plastic front faceplates they each sport. The
bodies of both radios are metal, with the FT847 being the more substantial
of the two. Yaesu took a page from the excellent IC-735 thermal system and
uses a very substantial internal heatsink which gives the radio great internal
rigidity. The IC706 is quite a bit less robustly constructed mechanically, and
its removable faceplate is often prone to intermittant connnection problems.
No one yet knows how well the FT100 is built, but the prototype I saw was
quite a bit heavier than the IC706. It too has a remotable plastic faceplate,
so it shares the vulnerabilities and intermittant problems of the IC706 in
that regard. You'd have to cobble up some way to protect the faceplate of
any of these radios for rugged use.

As far as mechanical shocks displacing the internal components off the circuit boards, nearly all radios use SMD construction today, and that will easily handle 8,000 G shocks without breaking a solder bond. The cases likely won't stand up to that abuse, equivalent to a 10 foot drop onto concrete, but parts won't come flying off of boards. SMD is inherently very resistant to mechanical shock.

None of these radios is waterproof, of course. Dropping any of them into the surf would quickly put them out of commission due to the corrosive action of salt water. In fact, I wouldn't want to use them exposed to a heavy rain. Their cooling systems would suck water inside of them. This is true for virtually any radio employing a fan. Both the IC706 and FT847 also become squirrelly at low supply voltages, and both are a bit of a current hog on receive (2 amps standby), so they aren't good choices for operation off of a manpack battery.

If you forget manpack operation, the best radio to carry on a Dxpedition is likely to be the one all the other Dxpeditions carry, the Yaesu FT1000D. They have the proven track record. Just pack them well, and they should survive being shipped just fine. You'll need a generator.

If manpack is your thing, you'll probably have to build your own radio to get what you want. There are a number of kits out there that could be repackaged into a more robust case. They're QRP of course, but that sort of goes with the territory since you don't want fans and openings in the case, and you want them to be easy on the batteries.

How many embedded systems are even aware of the date?
AFAIK very few outside those in VCRs. Most of those always
flash 12:00 12:00 12:00 anyway, so no big deal.

I thought I had heard of North before his current circuit on the talk shows about Y2K. I agree that some of the older and more critical systems are cause for moderate concern.

There certainly will be more than a few foul-ups. But as for the "embedded" chips North goes on and on and on about, most aren't date critical, that is they don't make decisions based on date.

The microprocessors in my car, and more to the point in this group, my IC-756 and FT-8100R, are not going to blink as the date rolls over. This bunk about embedded widgets of North's is his last resort, as more and more financial, governmental, and other important computer *systems* come into compliance, or are shown to not be affected.

It really amazes me how so many intelligent, technically savvy people are taken in by North and his cohorts. The notion that the whole world "network" of computer systems will fail in one instantaneous catastrophic thump should make any systems analyst bray! Things are much too loosely coupled for that to happen, even if for a moment you accept North's idea that the whole barge goes down, it would take several weeks, or months, to even approach the level of collapse he claims. Someone's yelling "fire" in a crowded theater with this one.

I need any help you can supply about the above set.
I believe it's from the 50's. A domestic broadcast receiver
in a brown Bakelite cabinet 18"x14"x12" 250v ac. The back
panel is missing so there are several sockets I need to know
the purpose of. I suspect one valve to be dud as the top cap is
loose, DH63M. Speaker cloth requires replacing and it has a
couple of broken knobs, somehow I must get a photo onto the
Ng's. Does anyone know if Radio Bygones have ever featured
this receiver ? The audio side sounds like it works but nothing
from any of the wavebands.

Model T10A. Ser. No. 38353
Valves X61M
KTW61M
DH63M
KT61
U10

HELP!!! HELP!!!

AEROTRON Mpac VHF BASE
STATION RECEIVER NEEDED !!!

Our repeater group needs an Aerotron 60BR1
Mpac VHF Base Station Receiver, 132-174 Mhz,
to use as a test fixture and back up receiver for
two of our local repeaters. We would like to have
the complete receiver but would settle for the
receiver case with the master interconnect assembly.

You can email me at k4bwc@bellsouth.net
or you call me toll free at 1-888-798-7373 week
days or collect in the evenings at 1-919-231-2829.

Thanks.

Hi to all. I have an Alinco DX70th that I run in the mobile and as of late, the display begins to blink 5-15 minutes after being powered up. The rig works fine on receive and xmit before the blinking begins, but afterwards, its unusable. I've tried to do a full reset and that has not solved the problem. I believe that some internal part may be going bad once the rig gets warmed up, but i'm not sure.

Anyone with a similar problem or knows of a possible fix please feel free to e-mail me at the address below.

Thanks in advance,
Chris M.

3644. DXER'S LIBRARY SALE

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-13 00:00:00 UTC
From: "Ralph W. Perry" <theperrys@kwom.com>
Message-ID: <IChx2.18$Et1.185@news9.ispnews.com>
Source record: 150698

Here's some more great stuff, fished out from the shack from a never-again DXer.

1. THE DX EDGE!!! Totally cool 1970s technology for determining daylight/darkness terminator's path at any time. Consists of 12 hard clear plastic sheets with terminator drawn, plus a large map plastic guide within which the terminator plastics slide back and forth, depending on time. Very effective. Grayline Dxers NEED one of these. $22

2. QSLER'S DELIGHT: Four books guaranteed to make you a better verification hunter. "LA Commercials" by Klemetz/Ingelstrong of DSWCI; "Secrets of Successful QSLing" by Dexter, both versions, the small and the large; and the "QSL Address Book" by Dexter. All 4 book for $32.

3. DXER'S LIBRARY: Some great reading in this lot: "Shortwave Receivers, Past & Present" by Osterman; "Low-Band Dxing" (ham band 160, 80, 40, but some great takeaway knowledge for SWBC Dxers, too); and "1934 Official SW Manual (reprint). $35 for these three bound books, in super condition.

4. STOCKPILE OF PREPARED QSL CARDS! Here's a stack, about 6 inches high, of multicolored prepared QSL cards in Spanish and Indonesian, handy for verifying those out-of-the-way stations. The Spanish cards are the famed "Certificado de Sintonia" format (the originals). There must be more than 600 cards here, ready to go. $30 takes "em all.

Buyer also pays shipping.

==========

And for those of you who missed it, here is an updated version of my earlier ad, featuring other nice material:

RARE AND DESIRABLE, VINTAGE SWBC ITEMS FOR YOUR SHACK!

1. WORLD RADIO TV HANDBOOKS!!! Complete your collection's gaps now!
" 1984 thru 1988 - fine to near mint condition, $12 each
-- 1990 thru 1992 - near mint condition, $11 each

2. "NUMERO UNO" weekly private DX newsletter: Wow, a complete run of issues from the heyday of this legendary DX weekly, from 1972 - 1984!! Three binders, 3-inches thick each, jammed full of DX news, pioneering reports on rare DX stations, feature articles, controversy, you name it. Finally, you can now see just what all the noise was about and read what those "elitists" (hi!) were up to! Full-sized 8.5 x 11 sheets, a stack of paper 9-nches thick, 600 issues. Won't break this up, to be sold as one lot. $250 firm.

3. FINE TUNING: Again, a mother lode of early issues from another late 1970s/early 1980s private circulation DX every-couple-weekly: issues 1-70, 113-140, 172-239. One stuffed 3-inch binder. Plenty of great DX info. $50.

4. ?THE RADIO BOYS SEARCH FOR THE INCA?S TREASURE?, here?s one that you never see, a hardcover ?Hardy Boys? type of radio aficionado?s novel for kids, copyrighted 1922. Super condition. If you call yourself a diehard LA Dxer, your shack isn?t complete without this. $50.

5. SOUTH AMERICAN HANDBOOK: Very handy reference, and the historical stuff, of course, doesn?t age. Maps and geographic info make this classic a must-have. Save twenty bucks and buy a used copy! 1983 - $8. 1976 - $6.

6. BROADCASTING STNS OF THE WORLD (FBIS), BOOKS I & II, 1974. Nice condition, 500 pgs of data from the US govt?s listening posts. $10.

7. REVIEW OF INT?L BCSTG: 1983-84 Issues No. 75-87, $3.

8. GRAB BAG OF RADIO REFERENCE BOOKS: Japan?s ?BCL? (date?); ?DXing According to NASWA?; Radio Amateur?s Handbook 1973; The ARRL Antenna Book. Take ?em all for only $12

9. DANISH SW CLUB INTL BULLETINS: 3/73 TO 7/80, three 3-inch binders chock full of info. Also, bulletins from the Finnish DX Club, 1967/68/71/72. Only $20 for all of it!

10. VINTAGE FRENDX!!!!!!! Saving the good stuff for the end, gang: A lonnnnnnng run of the monthly publication of the North American Shortwave Association, FRENDX, from Jan 1971 through May 1984! That?s 160 issues of nostalgia, news, radio information and feature articles, old names and faces, history of stations, etc. Virtually priceless! ..... but for you, the entire lot goes for $250, just a shade over a lousy buck-fifty an issue. You?ll never buy such great reading, so cheaply, again ! (Bonus: a free year of SPEEDX, just for fun.)

11. ANDES FOLKLORICO MUSIC ALBUMS!!!!!!!! Here?s a classic deal for the Latin DX specialists. Imported LP albums (get out your turntables!) from Ecuador, Peru and Bolivia, featuring that beautiful haunting music from the Andes. Finally, you can learn the different between a huayno and a passacalle! Special deal, assortments of 3 albums for $20, or 10 albums for $50. I have something like 50 albums to sell, so build up your collection now! Sorry, assortments will be as put together by me; no custom orders, please. I will try to make each lot as balanced a set as possible. Also, these are 20 years old and although look to be in tremendous condition, no guarantee that they will all play like new and some warping is probable on the discs.

IN ADDITION TO ALL PRICES ABOVE, BUYER PAYS SHIPPING/HANDLING.

> KC2EBP

What you are describing is anarchy in the airwaves which you see as the only alternative to dictatorship in the airwaves which we have now. Try to look in between and see that there is a way to have a regulatory body which will prevent abuse and chaos in the airwaves, give everybody the ability to have a station and do so without violating anybodys human right to freedom of speech and freedom of the press. The way you do that is to use common sense.

First, if you want to start a small station (covering your town or city) you go to the regulatory body (either FCC, or some voluntary group) and ask them if there are any unused frequencies in this area. They check, and give you a list of the frequencies available and tell you how much of it is available. For example 99.9 is available only in the east half of the city, 102.9 is available 10 miles beyond the city and 103.9 is unused 30 miles in every direction. Based on the needs you have, you choose whichever frequncy suits you best. They say "Ok. This frequncy is now yours. You have 3 or 6 or 9 or 12 months to start broadcasting. If you dont, you'll loose the right to broadcast for 10 years".

Second, after purchasing your equipment, you'll have to demonstrate to them that you are able to broadcast on your frequency without causing any interference and that your signal only reaches as far as you have agreed for your signal to reach. If you know what you're doing this should be a piece of cake and it could done during a day.

If you broadcast over a frequency which is being used, then that will be a criminal offense, and the regulatory body will track you down, take you equipment, destroy it and put you in jail for 1 month the first time, and more months the next times.

And that's all there should be to it. No costs, everything is done free. Everything is done fast, without hassle. And if you run out of frequencies, just add more to the band. Also one person can only own 1 radio station. So that it doesnt get monopolised and so that one person doesnt own like 800 stations across the country.

Computers have two different clocks, an operating system clock
and a BIOS clock. The operating system clock is easily adjusted
and doesn't post a problem for the year 2000. But the BIOS clock,
on the other hand, is hard-programmed into the computer's mother-
board... (From an article by Nick Pandya of CompUSA)

Here's the deal...to those of you who are bellyaching about me being here, you actually have nobody to blame but yourselves.

I ceased all postings on this newsgroup as of 1/2/99. A check of DejaNews will easilly confirm this. Over the next month or so, I read this newsgroup on a daily basis, buit did not post a note. I continually came across threads such as "Where's CB Rambo?", "CB Rambo is Gone", "Is CB Rambo Coming Back?", "I Miss CB Rambo", etc. Obviously, I was sorely missed here. A couple of weeks ago, a "new" CB Rambo decided to appear via DejaNews. I found this to be a rather poor imitation of the original and decided I must return in order to restore my good name as the true and proper owner of the "CB Rambo" monkier and likeness.

So you see, I only returned due to popular demand. Obviously, you nice people missed me a great deal. I humbly accept your request that I return to rec.radio.amateur.misc on a daily basis and provide my unique brand of humor, entertainment, and expert ham radio analysis. Feel free to post your "thank yous" publiclly...but please, no cash donations at this time. Instead, I request that you make a small contribution to "The Casey Thrower Mental Treatment Foundation" in my name.

Thank you for your time...and God Bless America!

"Where's that big 'ol CB RAMBO??"

Thanks for the info, Gary. Right now I'm not really considering cost. I'll do that after I find out what the *best* is and I'll work down from there, but only if necessary. I can always build and ruggedize my own kit, they're all pretty cheap, especially if I opt for CW only. As far as travelling outside of the country goes, it is a disappointment that I wouldn't be able to explore anywhere I pleased but there's still plenty of land in North America. The Canadian military uses PRC-138's, so obviously the US government isn't too concerned about them stealing technology. I've always wanted to check out the Yukon. I've heard Alaska is better than Yellowstone in the summer. Anyway, if I wanted the radio bad enough, it wouldn't matter how much it was going to cost. I'd figure out a way to afford one. I'm unmarried, which makes it easier. Another thing to take into consideration is that I probably wouldn't be alone. Hence, the financial burden isn't all mine.

Power consumption would be a concern however. My travels would probably last several months rather than a few days or weeks. (Don't ask - you don't want to know, but I'll give you a hint: have you ever read Kon-Tiki by Thor Heyerdahl? hehe) So, I wouldn't be relying entirely on batteries by any means. It'd probably have to be solar or wind generated, with the radio being used intermittently or even rarely.

Another gent sent me an email about my questions. He mentioned the Harris 5800M- MP was capable of 1.6 - 470 Mhz, all mode. That'd be perfect for just about everything, including satellites. There aren't any details about any of Harris's radios on their website, and there isn't even a mention of that model of the Falcon-II. Hopefully my info pack will arrive next week or so.

<rest deleted>

You don't understand, Lonnie and his type do not believe they have to
subscribe to any government laws made by man telling him what he can and
cannot do. He subscribes to a higher law which he can interrupt any way
he chooses to suit his own needs. He just dosen't realize that in the
real world it dosen't work that way.
Common sense isn't very common.

There's an excellent compilation of links to Y2K information at a new government site:

http://www.y2k.gov

Using the site's search engine to look for "embedded" yields, among other links, a link to a commercial consulting company:

http://year2000.epriweb.com/year2000/announcements/primer.html

that gives a good overview of some of the already researched and quantified problems with embedded systems and Y2K. As Gary alludes to, most of the problems with embedded systems will probably manifest themselves as minor annoyances requiring small workarounds (like, for example, using the year 1972 for the year 2000), and not catastrophic failures. Individuals wishing a much more detailed treatment of Y2K and the specific risks to technology are strongly encouraged to visit the above sites.

The media's, and the general public's, impatience with the Y2K issue is somewhat reminiscent of the late Senator Edmund Muskie's impatient desire for a "one-handed scientist" (i.e., one who wouldn't say, "on the other hand..."). There isn't a small number of easy answers to Y2K, just a large number of easy-to-moderately-easy answers, all with varying trade-offs. The technology community (at least in the United States) has, in my opinion, pretty much answered most all likely, and most all serious, Y2K questions. The optimistic predictions are based on a probabilistic, not deterministic, analysis, which is probably the only way you can make most kinds of predictions, anyway.

Rumor has it that several concerned SWL's and Hams will call in to the show and will play for Art and Wayne the .wav file of WB2OTK and his racial slurs. They will also discuss with Art and Wayne why is it that we have "Selective enforcement" now. Mr. Hollingsworth is wasting the American taxpayers money by sending letters to KT4TR telling him he can't read police reports on the air, when you have OTK and AF2Y cut-down Christians and people who gave thier life for this country day after day for years on end. And to top it off, the problem with KV4FZ, he has done less than WB2OTK, and he can't get his license renewed. IT figures when Bill Clinton the "President" can surrive Impeachment and WB2OTK can go scott free on a $10,500 NAL. Figures

Think About it!

Looks like the last thing the ARRL Board of Fools wants
is to listen and carry out the will of the membership. The
Board conducted surveys of the membership and then does
the complete opposite. It makes me so sick I could just
vomit. HEY ARRL, you want to save money? You can quit
having elections since you won't truthfuly represent
your membership anyway. ARRL will destroy a good thing
if it means more money in their pockets.

Rod Stafford, W6ROD was shoveling Bullshit when he wrote:

>Thanks for your input about the ARRL's licensing
>restructuring and testing proposal adopted by the
>ARRL Board of Directors a couple of weeks ago in
>Connecticut. Let me see if I can shed some light
>on some of the reasons for the proposed changes.

(Translation: We dont give a damn about your input, only ours.
Sorry you wasted time filling out our survey.)

>I am certain that some hams will find change itself
>to be very disconcerting. It is our nature to like
>things the way they are and the way they were. We're
>generally comfortable with that and not comfortable
>with change. In many instances, we would like to return
>to "the good old days" of ham radio. However, there
>are some very real reasons why amateur radio has to make
>some changes if it is to be around in the 21st century.

(Translation: We need to make getting licenses easy.)

>As amateur radio operators, we're slipping farther
>and farther behind on the technology power curve, and
>people take note of that. Take a look at the primary
>modes of communication we use: SSB, FM, CW, etc. Each
>of those modes of operation have been around 50, 60
>or 70 years or more.

(Translation: We couldn't think of any new modern modes that
would be popular, so we couldn't submit any ideas
with our proposal. Hope No one noticed.)

>I was traveling by airplane not long ago and the
>person sitting next to me was a retired electrical
>engineer.

(Translation: Your dues bought my plane ticket. League
money working hard for you.)

>amateur radio. He had a ham license about 45 years
>ago. He was amazed hams still use SSB, let alone CW.
>He wondered why the hams didn't use some of the more
>"modern" modes of communications.

(Translation: Not surprising, they won't use modern modes eihther.
We know most Techs haven't and won't try
satellite or even packet!)

>This is a typical reaction. We have to change people's
>perception of ham radio being a pursuit involving 70 year
>old communication techniques. One of the ways to help
>change that perception is to modernize our approach to
>CW.

(Translation: We can heap Bullshit on the issue and say CW
strangled the institution of modern modes, and
CW is blocking technology.)

>We're not eliminating it, we're simply trying to put it
>in its proper perspective as we move into a new century.

(Translation: Are we bold enough to propose the total
elimination Of CW? No, but our proposed new
easy licenses will still please thousands
Techs, CBer's and other non-hams. We'll gain
their favor, and memberships.)

>CW will be around for a very long time as one of the
>modes of communication for amateurs. However, as
>an examination element, it carries much more weight than it
>should at the present time.

(Translation: We're losing membership dollars because many
potential members reject learning CW and won't
join us unless they can have HF for free. We
hear their cry.)

>I believe the League proposal will put CW into a more
>proper perspective in the examination context as we try
>to bring amateur radio into the current technological
>environment.

(Translation: Hope we can fool our grass roots support, old timers,
and pro-code League members with this Anti-CW Bullshit
membership drive technology rhetoric.)

>I don't think there are many people who see CW as the
>future of amateur radio. If they do, in my opinion they
>are looking backwards, not to the future of ham radio.

(Translation: Pro-coders are backwards and their arguments
interfere with our membership drive.)

>And, as I mentioned, we're not eliminating CW. There
>will be plenty of people operating CW just as they have
>for years.

(Translation: We want to eliminate CW, but our life members
would die of shock. We'll call for the total
elimination of CW in our next proposal.

>that's why I posted this message for the VX-5R

I understand that. Out of curiosity, how long does it take the receiver to
recover after a transmission with CTCSS turned off? This may be a
receiver recovery time problem that's made worse by the addition of
the CTCSS decode time.

What I'm trying to discover here is the source of the delay. Since you
say that CTCSS squelch works properly when you haven't just transmitted,
it doesn't sound like CTCSS decode itself is excessively slow. If receiver
recovery after transmission is slow, however, it'll take longer when the
CTCSS decoding delay is added to the receiver recovery time. (Obviously,
the receiver has to recover before the CTCSS decoder can *begin* decoding.)

CTCSS decode time is a function of the tone frequency. For example,
a 100 Hz tone requires a minimum of 1/100th of a second to decode, a
67 Hz tone requires a minimum of 1/67th of a second to decode, etc.
(So it should be obvious that the higher CTCSS tones should decode
faster than the low ones.) Depending on the amount of anti-falsing
designed into the system, the delay can be several times that minimum.
So CTCSS always adds a delay to squelch action. If in addition the receiver
adds several hundred milliseconds of recovery time, the delay could become
very excessive as you report.

If the receiver does recover slowly, then suspect that receiver rail voltage
may be recovering slowly, or that PLL lockup time is slow, etc. But if the
receiver with CTCSS decode turned off recovers quickly, then the problem
can be a bias in the CTCSS decoder or a system logic delay. A bias (saturation
at one rail) can be the result of a faulty coupling capacitor. A logic delay can be
the result of a slow logic rail recovery problem (might be a regulator or capacitor
on the logic supply rail). You could even be suffering from a bit of RF feedback
in the unit.

It would be useful if others would report whether receiver squelch on their units
is slow in the situation you describe so we can determine if it is a design problem,
or just a component fault in your particular radio.

A lot of good that's going to do if the sending operator is speeding
along at say 10 WPM. (The ITU dictates that distress traffic be held
to 16 WPM. Maybe we should make that the standard for the ARS.)

>or eliminate the cw test for meaningful HF access.

Only if you promise to remain off any frequency in which CW is
permitted.

>MARS doesn't seem to mind that I have been tested at
>only 5wpm, and furthermore they no longer have cw nets.

That's because the head of MARS holds a tech license.

If he doesn't know, then why does he call himself an expert?

Gary North said on his web site that if "If you don't believe my scenario, you'd better believe his. (Yourdon's)" The Scenaro: Pretty much the same crap that North spews out on his web site with an "I don't know" disclaimer in a lame attempt to chocolate coat his gloom and doom scenario.

As for Gary North, his "end of the world" warnings have been around for twenty years. In 1980, he said we'd be in a war with Russia by 1984, and there'd be housing rationing. In 1987, he said that the AIDS epidemic would be so widespread that by 1992, we'd run out of hospital beds. He holds a PhD in history. With his track record, why should I believe him or anyone else about y2k?

And to top it off, North's "Remnant Review" newsletter is marketed as an investment newsletter! Give me a break!

In the late 30's my Dad's call letters were W6REU when we lived in
Santa Monica Ca. I remember if he wanted to talk to a person in a
specific town, he'd broadcast "CQ--CQ--anyone in New York City or
London etc".
Is there a place to accomplish the same thing as he did as an Amateur
Ham, except here on the Internet? Thought about chat rooms, but my
typing isn't fast enough for that. :-)
Also--is there a way to locate the person who now uses W6REU?
--
Have a *Great* day! Bud

I asked Burt, he never replied, since you agree I'll try asking you.
What does 'beating the dead' have to do with contests?

On the other hand, it would be difficult for the ARRL to have any control over your daughter learing enough about RF electronics to build her own HF rig, build and design antennas and participate in a whole host of modes.

Not sure why she would get discusted and loose interest due to a simple proposal, if it were to someday go through, would it change what your daughter could learn from amateur radio? Does having a ticket that says Novice, Extra or A, B, C change what you can learn? There are Extra's that I could run rings around technically, and then there are Tech's who could eat my lunch. The ARRL has little or nothing to do with that fact.

Total Crap ... Let's look at the realities of the new century, mores code had its day and means absolutely nothing in todays world other than just another way to communicate; something like AM, SSB, FM, DSP.

Yep...I heard the liar "Pork Butt", trying to claim KV4FZ was using foul language. No, Porky, YOU are the foul language king on HF. And you're so worried that YOU will get busted by Hollingsworth for just that offense, you are falsely pointing at the people you hate, in hopes of taking the heat off of you.

I've been covering this story for TEN YEARS in my shortwave column. I will GLADLY testify regarding the FACTS of this case in ANY court of law.

Sam

Is this a troll? if so please let me know. Yea there are countless government agencies wanting to monitor my secret covert CW transmissions, most of my international espionage uses secret 'coded' transmissions like "Name hr is Tim" and "QTH hr Rochester Hills, MI" when a hit is put out on a highly visible political figure we say "Rig hr Heath Cheyenne es ant is dpl at 40 ft." or when my underground organization is finally in place to overthrow the United States and most of Central America my morse code transmission will contain the green light code to all members of the organization, "Went to lcl swap this morn, picked up some tubes for the Swan and bought a keyer kit" Thank god the high tech monitoring stations have no idea how to track my HF signal or copy my straight key transmissions. ROTFLOL.

>
> 2.Insertion of the U.S. into the CEPT to allow world wide licensing uniformity

There are world wide guidelines for ships, aircraft, worldwide frequencies allocated for emergency transmissions etc., what would be so wrong with a world wide amateur license? If each country had their own set of HF frequencies and none of them were in the same band who would you talk to?

How is the ARRL selling out the rights of U.S citizens to be licensed by our government?

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 396
BID: $OPDX.396
February 15, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, AJ3M, N4GN, W4SD, N5NJ, KG6AR, AC7DX, K8YSE, NE8Z, KK9A, KU9C, K0KL, AH0W/OH2LVG, DJ5AV & DX News Letter, DJ7AO, EA4DX, G4BUE & DX News Sheet, HA5PP, HS0/G3NOM, OK2AP, VE2EH, VE3SRE, VE6JO and YO2LDE & South-West DX Bulletin for the following DX information.

CORRECTION TO OPDX.395. Under "7O, E4 AND P5, YEMEN, PALESTINE AND NORTH KOREA" the FAX number for Yemen's General Director of Ministry of Communications (MoC), Abdulgader Ibrahim, was incorrect. The FAX number should be: 967 1 331457

3B8, MAURITIUS. The "DX News Sheet" reports that Mart, DL6UAA, will be active March 8th through April 24th as 3B8/DL6UAA. He will be part of the PAM (Paradise on Air Mission) DXpedition 99. QSL via home call.

3B9, RODRIGUES ISLAND. The Midway-Kure DX Foundation (WH7M) announces details for its 1999 Rodrigues Island 3B9 (AF-017) DXpedition scheduled for the 1st through 10th of April, 1999. A team of nine operators representing five countries will conduct the DXpedition on all modes from 160 through 6 meters. Plans are for up to nine fully equipped HF stations to operate from a number of locations throughout the island. One station will be dedicated to RTTY only. The DXpeditioners are Bruce Butler (W6OSP), Kimo Chun (KH7U), Jari Jussila (OH2BU), Victor Keller (XE1VIC), Jacky Mandary (3B8CF), Garry Shapiro (NI6T), Yuuji Yoshitani (JA3IG/K1NT), Ned Stearns (AA7A) and Frank Smith (AH0W/OH2LVG), team-leader. Chief pilot stations will be Andy Chesnokov (UA3AB) and Gary McClellan (K7ZD). QSL Manager is Joyce Johnson (N7LVD). Callsign TBA later. For inquiries, send E-mail to: mkdxf@aztec.asu.edu

3D2, FIJI. Ed, K0KL, will be in Fiji March 20-27th, and will be signing 3D2KE. His operations will be on 40 and 15 meter CW. A 2nd op K2VGD will log. QSL via the callbook address.

5T, MAURITANIA. Yoshi, JA1UT, will be active again, possibly with other JA operators as 5T5U from March 12-17th. QSL via JA1UT.

5X, UGANDA. Several reports indicate that Joe, G3MRC, will be active again sometime during this month as 5X1P. Activity will be mostly CW and some digital modes. His length of stay is unknown. QSL via home call.

9G, GHANA. The "DX News Letter" reports that Hardy, DL1IAL, was expected to be active as 9G5HK for three months starting in February. So far there have been no QSNs reported. QSL via DL1IAL.

9M2, WEST MALAYSIA. "The 59(9) DXReport" reports that Ross, 9M2AX, is quite active on 160 meters. He uses a Sloper 160 ft. up for JA, EU and NA; and an Inverted L at 170 ft. for Africa, 4S7 and VQ9. On the receiving end, he uses 1000 ft. Beverage at 130 ft. OPDX has spotted 9M2AX this week on 1833 kHz between 1400 and 1430z. Also, check 80 meters during this time.

A3, TONGA. Paul, A35RK, has returned to his home on Lifuka Island last week. He states that Cyclone Cora did do some damage to his home, boat, and antenna system. However, the damage is not severe and all can be repaired. He has received repair parts for the Force-12 yagi and will overhaul it as soon as possible (Paul says, "It works, but the loading is "funny" and it's a little "bent"). His Butternut vertical (80/40/30 meters) is not working on 80m...cause unknown. His TS-450 was repaired in New Zealand, and he bought a new "battery bank" and solar panel which should solve the "chirpy CW" problem. His ICOM 706 is still in New Zealand waiting for parts from Japan. Paul now has a 2 element 6m beam, and as soon as the IC-706 arrives back on the island, he will be working 6 meters for the first time. Future plans for Paul included a trip to Fiji in May for 3-4 weeks. He will operate 3D2RK from both Viti Levu and Vanua Levu...mostly CW. He may return to Tonga via Wallis Island (FW) but that is not yet certain.

CO9, CUBA. CO2WF and CM5KL will organize a group of Cuban operators at Boca Ciega Beach for the ARRL International DX SSB Contest March 6-7th. Their callsign will be CO9BCC and they plan to operate 160-10 meters. They will enter the contest as a Multi/Stations and Multi/operators entry. The list of operators are: CM2KL, CM2YR, CM5MA, CO2GY, CO2II, CO2JA, CO2JX, CO2KC, CO2NT, CO2VQ and CO2WF. The QSL Manager for CO9BCC is VE2EH. Check out the following Web pages:
http://www.qsl.net/ve2eh/co2wf.htm
http://www.qsl.net/ve2eh/co9bcc.htm

DXCC FAQ #3. OPDX InterNet Subscribers will receive this article by Bill Moore, NC1L, Century Clubs Manager, as an addtional bulletin.

E4, PALESTINE (The excitement begins!) As of February 13th, Ali/JY4NE and Sami/ZC6B/KF2GJ have began operating from Gaza as E44A and E44B, respectively. Operations will take place from Sami's QTH. Activity by Ali may last up to 5 days. Look for them mainly on SSB but with some CW operations. QSL E44A to JY4NE, PO Box 9392, Amman 1191, Jordan. QSL E44B to: P.O. Box 1008, Gaza, Palestine.

Ray, HS0/G3NOM, reports that five members of IARV (International Amateur Radio Volunteers) led by JA1UT will soon return to Palestine, Gaza and West Bank to complete their aid project for a hospital telecommunications facility. In their spare time, mainly in the local evening after work, they plan to be active as E44MPT (Ministry of Post and Telecommunications) on 3.5 - 28 Mhz including WARC bands using CW/SSB/RTTY. They are expecting to be active by the weekend of February 20-21st. The popular DX frequencies will be used depending on QRM and coordination with current Palestinian stations. QSL will be again be via JA1UT as per ZC6MPT.
A third group is headed to Gaza. Look for Martti/OH2BH, Pekka/OH1RY, Pekka/OH2TA and Bernie/W3UR to be active from the "Palestine Hotel". Their callsign/s and QSL routes have not been announced as of yet, but thanks to the local Palestinian counterparts, they will be able to operate with the E4 prefix shortly after thier arrival and set up. Bernie/W3UR, editor of "The Daily DX", reports that their team will be working closely with the IARV to prevent interference amongst all E4 activity. Also mentioned, during the first few days of operation, they will concentrate on the most productive bands. Look for them to be active on CW and SSB. More details will be forthcoming soon by Tim Totten, N4GN. OPDX will send out a special InterNet bulletin on the update.

EN5, UKRAINE. Look for EN5J as a Multi-Single in this year's ARRL and CQ WPX SSB Contests. QSL will be via KG6AR: Chris Williams, 1117 S. Del Mar Ave., San Gabriel, Ca. 91776-3034.

HC8, GALAPAGOS ISLANDS. Look for Bob/N5KO, Stephen/K6AW and William/W4ZV to be active as HC8N in the ARRL DX SSB Contest (March 6-7th) as a Multi/ Single entry. QSL via AA5BT.

J7, DOMINICA. Members of the Foundation for Amateur International Radio Services (FAIRS) will be here now through February 22nd. Look for the following operators/callsigns: David/KK4WW (J79WW), Gaynell/KK4WWW (YL op - J79GMV), Kay/KE4EKH (YL op - J79EKH), Don/KE4UGF (J79UGF) and Larry/N4VA (J79VA). Activity will be CW/SSB on 40-6 meters, the IOTA frequencies and the WARC bands.

KG4, GUANTANAMO BAY. Look for a group of stateside operators to be active from here 2100z, February 16th, and operate through February 22nd. Their operations will be primarily on the WARC bands and 160 meters before and after the ARRL DX CW Contest. The group will use the callsign KG4SD during the contest. Look for the following callsign (with QSL routes): KG4DZ (via KG4SD), KG4SD (via W4SD), KG4ZK (via W4ZYT) and KG4NW (via NW3K).

NH7, HAWAII. Rick, NE8Z, reports to OPDX that he will be on Maui from Febraury 27th through March 6th. He will be active as NE8Z/NH7. Activity will be on CW on the WARC bands. QSL via K8LJG or NE8Z.

OKDX DXPEDITION UPDATE. The members of the OKDX Foundation have set up a new Web site called "Czech DXpedition PACIFIC 99". This group will be active towards the end of the month, please refer to OPDX.394. Meanwhile, check out their Web site at: http://www.okdxc.cz/pacific99

QSL INFO AND NEWS.....
3D2DX CARDS. Roberto, EA4DX, reports to OPDX that the all QSLs received direct with postage have been processed, labeled and mailed, and that the last pile of QSLs (700 envelopes from US and JA stations) would be mailed from the US on Tuesday the 9th. He states the backlog has been cleared. If you have not received your cards in a couple of weeks, just E-mail Roberto (rdiazg@nexo.es), and he will check to see if your card was received and mailed. He also suggests that you check the following online log Web site to see if you are in the log:
http://www.qsl.net/ea4dx/3D2DXlog1.htm
Do not send bureau cards because he is not a member of the Spanish Bureau. QSOs not requested directly will be mailed automatically directly to the different national bureaus, but these process will not begin before July. Roberto states 3D2DX DXpedition from last September netted (no duplicates) a total of 15,500 contacts on 160-10 meters SSB and 500 RTTY (15/20 meters).

There is a new QSL route for WP3C. Please QSL now to: Alfredo Velez, HC-02 Box 7455, Utuado P.R, 00641 U.S.A. Alfredo's E-mail address is: morse@coqui.net

Pierre, VE2EH, reports that he is the QSL Manager for CO9BCC (see CO9 above), CO2WF and HH2LQ.

Masahiro, AJ3MI, just returned from his trip to Vienna, Austria; Tbilisi, Georgia; and Geneva, Switzerland. He would like to thank everyone who worked him. Masahiro was on the air from 4U1VIC on January 28th and 4U1ITU on February 5, 6, and 7th. He made about 200 QSOs from 4U1VIC and about 1,650 QSOs from 4U1ITU. He suggests sending your QSLs via the bureau or direct to the following address:

4U1VIC - Vienna International Centre, P.O.Box 200,
A-1400 Vienna, Austria
4U1ITU - International Amateur Radio Club, P.O. Box 6,
CH-1211 Geneva 20 Switzerland

BQ9P, B1A and BT2HC UPDATE. Steve, KU9C, states that he is expecting these cards from the printer next week. At that time, Steve states that he has freed up his calendar over the next few weeks to devote to processing the direct requests for these cards. Steve states again, if you requested several calls in one envelope, please be patient, this slows the process. He is aware of various award submission deadlines, and will do the best he can to support your submission needs.

Steve, DJ7AO, reports that he is now the QSL Manager for Ray, DL2GG/YV5. Please send your QSL via bureau or direct to DJ7AO: Stefan Reyers, Luebecker Str. 4, D-22964 Steinburg, Germany. Don`t use the CBA of DL2GG because he is living in Caracas. E-mail your requests to: dj7ao@qsl.net (home page is: http://www.qsl.net/dj7ao)
Also, visit Rays homepage at http://www.qsl.net/dl2gg

SEMI-RARE IOTA TO BE ACTIVATE. Silvano, KB5GL, will operate from Grand Isle (NA-168) in the Gulf of Mexico, February 19-21st. It has been reported

that the request of this DXpedition came from Europe. This island was activated several years ago and only one time. The callsign will be KB5GL/5. Silvano will operate on 20-10 meters, including the WARC bands on the IOTA frequencies (14260, 21260, 18128, 24950 and 28460 kHz). QSL DIRECT ONLY to: Ron Lago, AC7DX, POB 25426, Eugene Oregon 97402 USA.

SPECIAL EVENT. Industry Canada has issued the callsign XL3D in celebration of the 25th Anniversary of the Ontario DX Association for the period starting at 0000z, March 25th, ending at 2359z, April 25th. XL3D will take the place of VE3ODX as one of the two "10 point" stations in the 3rd Annual Ontario QSO Party to be held April 24th, at 1800z through April 25th, at 1800z. QSL direct with SASE or SAE with sufficient return postage to: XL3D, Ontario DX Association, P.O. Box 161, Station A, Willowdale, Ontario, M2N 5S8, CANADA. Or you may QSL via the bureau via VE3ODX or VE3SRE. For further information on this or the Ontario QSO Party visit the Ontario DX Association Website at:
http://www.durhamradio.ca/odxa
Or E-mail your questions to Bob, VE3SRE, at: ve3sre@rac.ca

SPECIAL EVENT. Vitaly, VE6JO, Director of the Calgary Amateur Radio Association, reports that Industry Canada has authorized the use of the special prefix XO6 in place of VE6 for amateurs in Calgary, Alberta, for the period of Febraury 14-28th. This is to honor the Provincial Special Olimpics which will be held in Calgary February 26-28th.

V2, ANTIGUA. Tyler/K3MM, Roland/K3RA and Bob/N5NJ will be here February 17-23rd, and will be operating in the upcoming ARRL CW DX Contest as a Multi-Op/Two transmitter entry. During the contest, they will be using the callsign V26O. The operation will take place from the V26B (V21N) contest station. Before and after the contest, the operators will use their own Antiguan callsigns on RTTY, FSK, and SSB. QSL via the following callsigns/operators: V26O via N5NJ, V26MM via K3MM and V26RA via K3RA. ADDED NOTE: The V26B contest station is still available for the 1999 ARRL SSB Contest. For details, contact Sam/WT3Q via E-mail at: WT3Q@aol.com Details on the V26O contest station can also be found on the Web page at: http://www.frc-contest.org/v26B/index.htm

VP2V, BRITISH VIRGIN ISLAND. Look for Jack/W4NF, Bill/W4RM, Cliff/W4CE and Dave/W4DAV to be active as VP2V/WW4RM in the ARRL DX Phone Contest, March 2-8th. Certificates will be awarded to all stations working him on all 6 bands during the contest. Activity is planned for CW and Phone on all bands (including WARC bands) before and after the contest. QSL via W4RM.

VP5, TURKS & CAICOS. John, KK9A will be operating in the ARRL DX Phone Contest using the contest callsign VP5J. He will use the callsign VP5/KK9A before this event. He may also try to work a little of the CQ 160M Phone Contest. QSL to his home callsign.

VP8, SOUTH SANDWICH. The "DX News Sheet" reports that Carl, G4VFU, who is active as VP8CZJ/MM near Caracas, Venezuela, is saying he still hopes to be active from South Sandwich Islands later in the year.

My Y2K survival guide:

December 30, 1999:
-- 0900 hours: Move both smaller TV sets into the family room and tap into the cable that feeds the big TV.
-- 0930 hours: Test to make certain that all TVs work
-- 1000 hours: go to grocery, stock up on chips, dip, peanuts, soda, and beer.

December 31, 1999 -- January 1, 2000

-- Turn on all three TVs to three different college bowl games
-- Don't leave the room until the last whistle of the last game, evening of January 1, 2000

January 2, 2000

-- Sleep late.

My neighbor is stockpiling food and water for two weeks. After that I guess he will just die, if his theory is right. If it takes two weeks to fix everthing why dont they take two weeks now and fix it. Im not worried. I have my 4 watt battery powered qrp cw rig to handle all the emergency traffic with which will solve everything, provided anyone is out there that understand cw.

>Walt Davidson Email: walt@ dial.pipex.com

As a matter of law, the responsibility of the ARRL Board of Directors is to manage the affairs of the League. Unfortunately, they think their job is to manage the affairs of Amateur Radio licensing regulation, which of course is the job of the FCC.

In the past the FCC has accepted ARRL recommendations, without exercising its own legal responsibility. The ARRL has mislead the FCC on Morse code question for years. They failed to provide the forum for both sides of the Morse code question. To wit:

In the July 1997 issue of QST, Executive Vice President David Sumner wrote that the ARRL is "a working democracy". He ended his editorial with the following.

"The next time you hear someone claiming to know better than the ARRL what's best for Amateur Radio, ask them how many votes they got in the last election."

That appears to me to be an obvious attempt to silence dissent.

The ARRL is a nonprofit corporation, not a political democracy. It's directors have the authority to manage the affairs of the corporation, not the affairs of it's members. The ARRL NPRM is the collective statement of it's fifteen directors, not it's 80,000 members.

Every person who filed NPRM comments with the FCC has an equal right to comment and to be heard.

The Morse code question is a matter of government regulations (laws); not a matter of numbers, power and money.

Trying to fix it now is like trying to change the next light bulb
to burn out so it won't burn out. They simply do not know what
software routines will fail. Some software routines accept only
two digits as a passed parameter and will fail *because* a four
digit number for the year is passed by a clock routine that
has been fixed.

I have an RCA Series 700 UHF repeater. I
am looking for a a service, shop manual for it.
I need information for tuning up the RX/TX sections
and basic controller wiring (RX/TX audio, PTT and
REC COR) tap off points, for my external (CAT 300)
controller.

If you have such a manual for sale, or could copy
the appropriate sections and mail or fax them to me, I
would gladly pay for these services.

Thanks;

So a club decides to assist with communications for a 5K walk and this is an inconvenience to you? Too bad, join the program or call your buddies on simplex, end of story. If the club advertised this particular repeater as a talk in freq. for the hamfest and your on you way there, you should have known better than to start up a QSO on that freq.

If cell phones are so much easier why are you calling your buddies on ham radio?
If you used a cell phone you would never again have to worry about 5k walks, Fox
hunts, ARES, or anything else that might inconvenience your using the repeater.

Source record: 150582

I am a no-code. I am currently learning the code. There seems to be a lot of no-coders that give that class of licensees a bad name. It also goes for those higher-classed hams that continually bitch about no-coders and put them down. I think most of you forgot to mention something here, or, I didn't see it. I see people saying code is of no use anymore. That's bullsh**. Code is the most reliable mode of communication. Someone using CW has a much better chance of getting through a long-distance than someone using some other mode of communication. I know I'm probably not phrasing it right, but I'm sure you get my point. So, those of you who sit here and say code is dead, useless, and should be abandoned, maybe you should read your study books again.

C'mon Cecil, you can't be serious. First of all most all the accounting type programs have already been fixed and tested. This entire thread about power companies shutting down is absurd. Yes were all going to starve to death because someone can't get thier billing records straighted out.

Tim

No, I don't care for it or watch it. The contestants and the host are a little too overbearing and driven for my tastes. And even if I did tune in regularly, I think ham radio would make for a boring category given the general public audience.

YMMV, of course, which is why Jeopardy is such a commercial success in syndication. Just don't make me watch it :-)

> with all other points?

Well, we have 7 hour conference calls at work (involving non-cellular phones) all the time. They work fine. Some people call in and drop off as necessary (or when the handset gets bumped), but the host and the die-hards stay on for the whole 7 hours or more.

Is there something about the cellular telephone system implementation itself which limits calls to a certain time limit ? Assume for a moment that the cell phones are adequately powered from a car battery, AC-driven power supply, or other suitable source.

All this is, of course, ignoring cost of airtime & the conference bridge for sake of discussion. But given it's for public service, it's not beyond belief that a sponsor or donor wouldn't help out with this aspect. Especially since these events generally happen on weekends, holidays, and non-peak hours.

Note that I'm not implying that emergencies always will fit that category. Just trying to keep the discussion focused here.

AM and FM (mono) broadcast receives fine, but it's a tiny speaker. SW is weak, you wouldn't want to buy this for SW listening. It does come with an "extender" antenna for < 50Mhz receiving, but it doesn't help much.

It's basically a dual-mode ham radio (I haven't tried the 6m tx yet) with novel receive capabilities.

Paranoia? You poor, brainwashed individual. Do you really think the
government protects our best interests? No, they don't. They are only
interested in protecting their own. I don't view their message as being
spam. Did you even look throught their site?

Let me point something out here:

Clinton got away with perjury.

If we had commited perjury, don't think we'd be in prison now? I'm sorry,
but the government is a highly corrupt organization and is in need of major
reform.

I've done a couple things in the past 3 years to get me in serious trouble.
On one occasion, I transmitted on a police frequency. I was charged with a
misdemeanor and all I got was a slap on the wrist. I paid court costs, did
public service, and was on conditional discharge for 18 months. Just
recently I did something wrong, and instead of the company pressing charges,
they terminated my employment and made me pay restitution. I have learned a
valuable lesson, even though I knew better in the first place. I didn't get
away with anything on both occasions. Why should Clinton get away with
anything? That's bullshit! I'm not aksing for him to be put in prison or
anything serious like that, but he should get punished, somehow.

I'm sure you do, but since were discussing cellular vs. an HT it doesn't really apply.

> Is there something about the cellular telephone system implementation itself
> which limits calls to a certain time limit ?

No

> >Assume for a moment that the cell
> phones are adequately powered from a car battery, AC-driven power supply, or
> other suitable source.

Why would we assume a car battery or AC supply? The whole idea of having communications during an event like a parade or marathon is to have communications on the street and to be able to move. A guy sitting in a car is of little use during an event like this. If there is an accident a block away you move to the accident and report it via radio, not wait for someone to bring you the information so you can call it in from a fixed location.

> All this is, of course, ignoring cost of airtime & the conference bridge for
> sake of discussion.> But given it's for public service, it's not beyond belief
> that a sponsor or donor wouldn't help out with this aspect.> Especially since
> these events generally happen on weekends, holidays, and non-peak hours.

Well it shouldn't be completely ignored, first you need to find a cell phone company who is willing to provide 25+ cell phones for the staff along the route, now since I have never seen a cell phone yet that went more than 2 hr. continuously transmitting we now need 4 fresh battery changes to ensure continuous communications.

25 staff members * 7 hr. = 175 hr. = 10,500 minutes @ $.20 / min = $2100.00 add the cost of 25 phones, chargers, and 100 batteries too. Oops, I almost forgot the 25 boom headsets, your not going to hold this thing to your ear for 7 hr. are you? Probably $10,000 total? Sure you might get the above donated but even if you did, the practical application of it just isn't there. Of course Nextel provides two way radio features with their phones, but then were back to HT vs HT.

> Note that I'm not implying that emergencies always will fit that category.
> Just trying to keep the discussion focused here.

Good idea, lets focus on what it might sound like to listen to the open mics of 25 cell phones all coming back to one location then sent to your phone. Since there is no PTT button your listening to audio from 25 transmitters all at the same time. Of course the nice part is, if your in a parade you get to listen to 25 different bands all at the same time! Yep, sounds like ideal emergency communications to me.

Bottom line, it doesn't work.

it's a mixed bag.

If everyone on the "inside" trades around a lot before the regular guys get a shot, then it can lead to reduced stuff being available for sale with the net result of the swap being dissatisfaction for the paying crowd that came in.

i quit going to shows/swaps where the starting time was, say 9 AM, but all the dealing was done before 8.

didn't take many of those for me to decide i really didn't want to show up when everyone else was leaving.

so in that respect, the swap operators are trying to guarantee there'll be a market for the crowd for the time when they said the swap would be open.

one of the local 5k runs was going to use NexTel until they found out that phone users had to continue to do some function on the phone every few minutes to keep the conference call going. it wasn't enough to make the call into the bridge or set up on a repeater..the phones would drop off by themselves and it apparently wasn't simple to reset to get back into the group.

Here's your answer. The United States Army first experimented with Meteor Scatter (MS) in 1951. The rationale then was that if the ionosphere was roasted due to a nuclear exchange, we *might* still have a way to conduct national command authority (NCA) messages east to west, or vice versa. I saw a presentation all about this in I think 1984 or 85 in Rochester, NY. If I further recall, hams began playing with it about 1953. The single largest reason why hams had NOT played with it earlier was of course national security, but the impracticality of the equipment used caused the Army to allow "tinkering hams" to play with it and see what they could come up with. Again, if I recall correctly, they were sending analog burst communications (CW) using a 50 KW, 35 MHz (or somewhere in that range) transmitter and rather large antenna arrays. 1200 mile contacts were made and were rather predictable as they found that there were statistically regular inbound meteors permitting it to work. Hams today of course use 50 or 144 MHz equipment, on CW of course, with as little as 50-100 Watts and a single beam to occasionally make a contact - I've done it; explaining how to do it is another post!! But again, the government thought it was all just a big waste of time back then, so the concept went into the "dumpster" - into a "dumpster diving" ham's hands!

3726. ARRL's Secret Agenda

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-14 00:00:00 UTC
From: mf_luder@my-dejanews.com
Message-ID: <7a7g3s$2f1$1@nnrp1.dejanews.com>
Source record: 150611

ARRL is seeking to harmonize the licensing structure with New World Order guidelines established by the U.N. (read ITU) in conjunction with the U.S.

These include:

1.Ultimate elimination of Morse Code to allow easy monitoring by world government agencies
2.Insertion of the U.S. into the CEPT to allow world wide licensing uniformity for the day when governments relinquish their sovereign rights as states to world licensing authorities

ARRL is now internationally, as in WWI and WWII domestically, a willing participant in the sellout of the rights of U.S. citizens to be licensed by their government. The process will not be a sudden one, but a gradual process of conspiracy so subversion of our rights will hardly be noticed, as Jefferson warned.

The length of wire to earth ground may cause a problem of the wire becoming an antenna but it won't hurt to try it. I use a #10 wire and am already in the basement but must run across the house in a horizontal position to get to earth ground. No difference with the ground wire connected or not in my case. You can go crazy trying to evaluate all the theoretical should I or shouldn't I --- and in the end each location and situation is so unique that short of electrocuting yourself you need to experiment.

use "WAREZ" as the search parameter on a newsgroup search. I see the
following groups on my server:

alt.binaries.warez.ibm-pc.old
alt.binaries.warez.ibm-pc.os
alt.binaries.warez.ibm-pc.d
alt.binaries.warez.ibm-pc.dos

and several more that are WIN or WIN95 related. One of these days I will
check out an intriguing one... alt.binaries.warez.ibm-pc.kidnapped-harem.
Anyway, lurk around on those groups for a while before posting. You might
check out deja-news if you are in a hurry. Nothing pisses people off more
than posting a request for a long binary that was just posted three days
earlier. You may find your prog already posted. They actually post entire
programs and OS's there... on those groups, mostly "out of print" stuff. I
see not a damn thing wrong with using these channels to get software that
the company will no longer sell. Go for it.

BTW... watch out how you use the word "warez" on aol. do NOT start a chat
room using that word, and do NOT go to a chat with "warez" in the name. Used
to be, unpleasant things could happen. Should be okay on usenet. If aol
server does not carry those newsgroups, you are just stuck with deja news or
another web based server.

>yours. You have 3 or 6 or 9 or 12 months to start broadcasting. If you dont, you'll
>loose the right to broadcast for 10 years".

Hmmm. Why should the taxpayers do your job for you? The way it works now,
you find a frequency which meets the non-interference limits and propose
to the FCC that it be added to the table of allocations for your community. If
you can find one, they start a proceeding to add it to the table of allocations.
Anyone can then comment on the allocation. If no serious objections remain
unanswered at the end of the comment period, the frequency is added to the
table of allocations for your community and anyone can file to use it. Then
you can file for a CP. If you are the only one filing for a CP for the frequency,
you get it. If several people file, a comparative hearing is held to determine
which of you would best serve the community. The winner gets the CP. You
then have 12 months to get the station operational. There are filing fees
associated with all this to cover the government's cost of administering
the program. There are also penalties for selling, transferring, or abandoning
the CP in order to discourage trafficing and frivolous applications.

>Second, after purchasing your equipment, you'll have to demonstrate to them that you
>are able to broadcast on your frequency without causing any interference and that
>your signal only reaches as far as you have agreed for your signal to reach. If you
>know what you're doing this should be a piece of cake and it could done during a
>day.

Yeah, right. You are required to demonstrate that your signal meets your Grade A
and Grade B contours over the specified community, and that your signal does not
overlap the Grade B contour of any other station on the same channel or exceed
specified levels on the first and second adjacent channels. This takes quite a bit
longer than a day in most cases. It requires careful engineering of the site and
antenna pattern (this engineering analysis should have been done before you filed),
careful field strengh plotting, and careful adjustments of your station parameters.
In some cases, you can't meet both your required coverage and the protected
zones because of terrain. Then you have to refile and start over. (This is usually
a sign that you didn't do your engineering homework before you filed, and may
bring your competence to hold a license into question during the refiling.)

>If you broadcast over a frequency which is being used, then that will be a criminal
>offense, and the regulatory body will track you down, take you equipment, destroy it
>and put you in jail for 1 month the first time, and more months the next times.

They do that now, though not as vigorously as they should. With a horde of new microbroadcasters, do you think that they'll be able to do better? Note that due to consumer receiver selectivity limitations, you have to protect signals on the first and second adjacent channels as well as on your own. There are also forbidden channels where the image of your signal may interfere with a signal on another channel. You can't operate there either. (These are *receiver* problems, of course, but broadcasting has to take into account the limitations of the audience's equipment as well as the limitations of its own equipment.)

>And that's all there should be to it. No costs, everything is done free. Everything
>is done fast, without hassle. And if you run out of frequencies, just add more to
>the band. Also one person can only own 1 radio station. So that it doesnt get
>monopolised and so that one person doesnt own like 800 stations across the country.

In the first place, nothing is free. You're asking that taxpayer money be used to do the engineering work that *you* should be required to do before filing. That's welfare freeloading at its worst. In the second place, for the process to be fair and open, comparative hearings must be held, no back door deals, everything must be out in the open and by the book. In the third place, just which radio service is going to have frequencies taken from it to add more channels? All of the spectrum below 300 GHz is currently allocated to one service or another, mostly by international treaty. If you want more broadcast frequencies, some other service has to lose frequencies. They're going to vigorously oppose that idea. Plus there's the practical problem that your listener's
radios only cover the existing broadcast frequencies, so broadcasting outside of them does you little good.

OTOH, I do tend to agree with you that the recent relaxation of multiple ownership rules was not a good thing for diversity in broadcasting. The megacorps have the resources, due to the economies of scale, to bring popular programming to a community while a mom and pop operation doesn't. So they can quickly come to dominate a market. Advertising dollars follow the audience, the revenues for the mom and pop stations dries up, and they are forced to go dark or sell out to another megacorp. But the only way to address that is to have greater government intrusion into the marketplace, something I thought you were against.

I'm curious how you'd be able to provide comms for a marathon utilizing cellular telephones. The prime requirement for a public service event such as this would be to have each station along the 26 mile route capable of talking to all other stations simultaneously; the duration for such an event would be on the order of seven hours. Using phones, you'd have to have a seven hour conference call. Is that feasible?

>Good for you, use your HT to call "CQ Contest" instead

Huh? Why would he do that while providing comms during the marathon?

We're limited to a 200-foot height. To go higher than that one needs
authorization from the FCC. (See S97.15)

One hundred feet is affordable and not as much as a safety and stability
headache as something higher.

3737. Harry Angel Sprint Contest

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-14 00:00:00 UTC
From: Peter <vk4vw@qsl.net>
Message-ID: <36C62314.B2A5C10F@qsl.net>
Source record: 150645

Here are the rules for the harry Angel Memorial Sprint Contest.

Mainly for those in the Oceania region ALL are welcome.
****
Harry Angel Memorial Sprint
1100 - 1246 UTC, Sunday April 25 1999

This sprint contest which is open to all Amateur Stations and SWL,s honours the late Harry Angel VK4HA. Harry who passed away at the age of 106 in 1998 was at the time Australia's oldest living Radio Amateur. Harry served in the Middle East and other areas during the First World War. The Sprint will be unique as it will last for 106 minutes, Harry's Age, in place of the customary 60 minutes.

The Object is to make as many QSO's as possible on the 80m band (swl's hear and log QSO's) during the 106 minute contest period using Phone or CW modes.

Categories are Single operator only. CW, Phone, Mixed (CW & Phone), & SWL.

Frequencies are 3500-3700 kHz (CW) and 3535-3700 kHz (phone).
Contacts in the "DX Window" (3.798-3.800) are not permitted.

Exchange RS(T) and a serial number starting at any number between 001 and 999 , reverting to 001 if 999 is reached.

Score two points per CW QSO and one point per Phone QSO. You may work a station once only using each mode. Logs must show the time (UTC) callsign worked (or both callsigns for SWL's), mode, RS(T), and serial numbers sent and received for each QSO.

Logs must be accompanied by a summary sheet showing name and date of the contest, category entered, name and callsign of the entrant, station address, equipment used, points claimed and a declaration that the rules and the spirit of the contest were observed.

Send logs to Harry Angel Sprint, PO Box 171, Caboolture QLD 4510 or by email in plain text only to vk4vw@qsl.net to be received no later than Friday 28 May 1999.

Certificates will be awarded to the top three scorers in each section with a perpetual trophey awarded for the top scorer in the CW, Phone & Mixed categories.

My point is, Jeffy-Boy, Why use Ham Radio when Cell Phones are so much easier,
In my old area in Iowa, I could never use the Club repeater when they were
using it for 5K walks, Foxhunts, ARES stuff, etc. This made me upset that I
could not call my buddies on the local repeater. I was once in QSO with
someone one time en route to a Hamfest and was RUDELY told to leave the freq
because they needed the repeater to use for directions fot the hamfest.

3742. Negaunee Swap policy?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-14 00:00:00 UTC
From: pmarkham@newsguy.com
Message-ID: <7a57hk$1i1a@news1.newsguy.com>
Source record: 150650

This is my opinion concerning a policy of the Negaunee Swap held 13 February, 1999, in Negaunee, Mi.

I found out, at the swap, that vendors who purchase table use and entrance tickets cannot engage in business between themselves prior to the event being open to the general public. Three times, while engaged in making purchases from other vendors, I was subject to verbal "abuse" that made me feel like a black man at a WASP convention.

I do not believe the Hiawatha Amateur Radio Association, that hosts the event, should determine my business policy, or those of others that wish to deal with me. If the Association, through its agents, wishes to enforce such socialist rules, it should be advertised in the various spoken and written sources used to promote the event. Had the policy been stated in a forthright manner, I surely would have done other things with my life, this Saturday.

I have spent a significant amount of money at some 4 previous Negaunee swaps, in the early 90s. I do not haggle over the price of merchandise. I pay the price if it is priced fairly, or ignore it if is not. I do not offend sellers with insulting offers because I believe I am owed something for nothing, or close to it.

I will not attend another Negaunee swap, until the current policy is changed. Your game, your rules. I was made to feel unwelcome after spending a piece of my life to support the swap. As a consequence, I will take my business elsewhere. The event is hurt when you drive off good customers, be they buyers or sellers. I am sure the "something for nothing crowd" will not be offended.

My thanks to those vendors that believe in basic principals of laissez faire capitalism and ignored the strident yapping of the martinet doing the Association's bidding.

Hello Jeffrey...

True enough, if your operating system is relatively new it should have no problem handling the years into the future and they are easily adjusted.

When it comes to computers and the BIOS clock that is hardware (firmware) dependant. What matters is what is the format for the year in BIOS calls SetDate() and GetDate(). For all DOS systems (PC's, AKA IBM clones) the BIOS calls on this platform uses or returns the year, as a number in Cx, in the range of 1980 to 2099 so these computers are only good for another century. :-)

You didn't say but I imagine Nick's article was addressing other platforms also.

3748. Meteor Connections

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-14 00:00:00 UTC
From: BColenso@aol.COM
Message-ID: <73647165.36c660f8@aol.com>
Source record: 150656

When did hams start using meteor burst communications. If memory serves me correctly, it was LONG before there was packet or digital communications of any kind, except for CW (the original digital communications). I think I remember reading about meteor burst communications was always CW, and always short, contest type QSO's because conditions were so short lived.

The following is from Popular Science, January 1999, page 37.

Bob
KD8WU
==========
A Cold War communications system that bounces radio signals off meteors is finding a new use as a link between dispatchers and both aircraft and ground vehicles. Designed initially as a backup system for satellite communications, meteor burst communications use brief radio signals reflected off miles-long ionized trails left by meteors entering Earth's Atmosphere.

The system works by continuously probing the shy with a radio signal. When the probe hits a meteor trail at a specific angle, the reflected signal returning to Earth activates an inexpensive sensor attached to a vehicle, cueing a digitally compressed signal to be sent. Transmissions are short--50 bytes--because a meteor trail lasts only about three-tenths of a second. Transmissions range, however, is about 1,000 miles.

Billions of meteors enter the atmosphere daily; and for the system to work, a meteor need only have a mass of 0.001 grams and a diameter of 1 millimeter.

Starcom of Seattle, Washington, uses meteor burst communications to send location information from GPS receivers aboard ambulances back to the radio dispatchers. The main advantage, of course, is that meteors are a lot less expensive than satellites.

Meanwhile, Meteor Communications of Kent, Washington, combines the technology with standard radio transmissions for use by the British Columbia Forest Service. Location, speed, and other GPS data from aircraft and ground vehicles are transmitted automatically even when they are out of radio range. And with a two-way messaging feature, a pilot can report a fire by touching a screen icon.

Most embedded systems don't know or care what year it is and will be just fine. What you need to figure out is which embedded systems use the year for any kind of manipulation. An example is a VCR which does care about which year it is (for handling leap years and such) so these can and should be tested. If the VCR doesn't operate correctly it wont be any worse then a VCR which is permanently relegated to flashing 12:00 for the rest of its life. If you can tolerate that it will be OK as long as you don't want to program it.

I know my stove doesn't care what year it is; as long as Essex County Gas supplies the gas on demand. :-)

My microwave doesn't care about the year; as long as yada, yada, yada...

What are the major things? I would guess utilities... gas, electric, phone and cable both for supply and billing, in that order. :-)

Possibly more important is the financial institutions which seem to be taking this most seriously.

What else would really cause a halt to life as we know it? I mean, there possibly is something that is being overlooked... we know if all the trucks didn't truck for a couple or four days everyday things (like food) would start to be become scarce. So, what could cause that? If nothing then that scenario wont happen, go to the next thing.

The "473" is the value 47 times ten to the three power: 47,000 pf.
The letter that follows the above value indicates the tolerance:
"K" means +/- 10%.

The "2E" might be the EIA temperature characteristic code:
"2" would indicate the maximum temperature in its operating range
is +45C, and "E" would indicate that the maximum capacitor change
over its temperature range is +/- 4.7%. (There should be a letter
preceding the "2" - it would indicate the minimum of its temperature
range.)

Yeah, but that's simple to deal with, simply *lie* to it and tell it that it is an earlier date (all BIOS clocks have a way to reset them). It has no way to tell if you are lying to it, and will happily proceed on. As you note, you can always correct the OS date at bootup if that's of any importance to applications which may use it. The BIOS clock is only a convenience to allow you not to have to manually set the date at bootup. AFAIK, all BIOS chips made after 1997 are Y2K compliant, but if you have an old PC, you may have to resort to setting the date manually at boot up.

(Note, you could just lie to the OS about the date too, but if you do, remember to touch all files so it won't think some files are bogus because they have future dates. (touch is a unix command, attrib lets you do the same thing in DOS.) This could be confusing to some file backup programs, so start lying early. We're already lying to the OS about the date on one of our computers because some applications running on it are not Y2K compliant, and fixes won't be available in time (or at all in one case where the vendor is out of business). The only issue is that some of the printed management reports have the wrong date on them. We basically don't care, but we've bought a rubber stamp to hand correct them.)

But what we're talking about here is embedded systems. That's
the microprocessor running the engine controls of your car, the
microprocessor in your microwave oven, VCR, radio, etc. They
generally don't care about the date, or if they do, can easily be
reset to a different earlier date. Jan 1, 1972 is a repeat year
(every 28 years the calendar repeats). That means that all the
days of the week fall on the same days as the year 2000. So if
your embedded controller does keep the date, simply resetting
it to 1972 will allow it to do any functions requiring knowing the
day of the week, such as recording your favorite soap opera,
or adjusting the set back temperature of a thermostat.

One major embedded controller application is running traffic
signals. That's time and day of week sensitive. The city of
Evansville Indiana discovered that their traffic signals would
all lock up on Jan 1, 2000, so they have simply told the controllers
it is 1971 instead. When 2000 rolls over, the controllers will think
it is Jan 1 1972, and all proceeds as normal. They can then worry
about the problem in another 28 years. We've done the same with
some of our equipment which is day of week sensitive.

Most Y2K issues are as simple as this. The exception is systems
which calculate the time cost of money. They depend on the correct
date. Simply lying to the computer won't do. Banks and credit card
companies are feverishly addressing this issue. Most have already
run into it for any calculation that extends beyond 2000 (credit card
expiration dates for example), and have already come up with fixes.
This is one area worth watching. Keep some cash on hand at year's
end, and keep good paper records of your financial status. There
may be some glitches with credit cards and bank statements.

The package tracking systems of some shipping companies may
be a bit vulnerable too. I wouldn't depend on packages shipped
around the first of next year being able to be computer tracked.
But the trucks will still roll, so shipments should get there if they're
labeled properly.

I wouldn't worry about major industrial systems such as power, water,
gas, etc. They are demand based, not date based. The only part of
those systems which is date sensitive is the billing computer, and they
can simply hand stamp the correct date on bills until they straighten it
out. (A bit of a boost for minimum wage employment for a while.)

>KC2EBP

At the outset of your response, you assume that I follow the "general free radio system of beliefs". I do not. The airwaves are PRIVATE, and unused spectrum is like unused land in the desert.
In order to enforce the protection of one's cultivated chunk of spectrum, standards need to be in place, and we can start with existing or proposed LPFM standards that the FCC is considering.
The ownership of frequencies is dependent on whom has cultivated a slice of spectrum first, and as such, vigilantly maintained it for a period of time, with no unreasonable impact on other uses of broadcast spectrum.
The whole idea of government regulating the spectrum is based on the premise that people are ignorant, impudent babies, incapable of acting as responsible adults. I remind you that the government is trying to regulate cigarettes, and handguns too, shifting the responsibility for deaths to the manufacturer and away from the individual user. This is ludicrous.
I believe in the formation of informal coordination committees, to assist larger numbers of broadcasters with blending into the radio spectrum in an efficient and safe manner. It is the DOCTRINE OF PRIOR RESTRAINT which is morally wrong and indefensible. This is like a mafia group saying you can't open a bake shop unless you pay us $20 million first and play by our arbitrary and capricous rules.
When dealing with people who take advantage of loopholes, there simply should be no ambiguity in the rule of trespassing. If an interloper fires up a transmitter on your frequency and harms your coverage area in a demonstrable way, you should be able to take the matter to court, if a direct request of the interloping party goes unsatisfied. When a burglar breaks into your home, you would take immediate action. This is no different.

Almost everything like that requires that the power grid stay up. If the power grid goes down for any severe length of time, we are hosed. Without electricity, we have no food because the electric gasoline pumps don't work. Without electricity, we have no water in my home town because the pumps won't work. Without electricity, we have no heat because the thermostats/heat pumps won't work.

How long will the power company keep supplying electricity if the computer thinks the latest meter reading is from 1900 or 1972? In other words, how long will the power company choose to supply power if they can't make a profit because their records are screwed up?

>My point is, Jeffy-Boy, Why use Ham Radio when Cell Phones are so much easier,

That doesn't answer my question above. You showed contempt toward Boston
amateurs due to their plan of using 2m rather than cell phones for mara-
thon support along the race route. So once again I must ask, how would
you provide comm coverage for a seven-hour marathon utilizing cell phones
insuring that each check-point is able to have simultaneous communication
with all other points?

The only valid "My frequency" claims that I'm aware of are
the recognized "bandplans". 10 meter FM repeater frequencies
may come under that concept, I'm not sure. Of course a
repeater must remain on a specific frequency to be of much
use. Common sense should also be employed but too often is
not.

Why ham radio is not dependant upon what happens in the military:

*We ragchew for hours, the military doesn't
*We install repeaters that duplicate coverage of already existing rptrs,
the military doesn't
*We use rptrs when simplex would suffice, the military doesn't
*We have on-the-air contests, the military doesn't
*We bounce signals off the moon (EME) for fun, the military doesn't
*We purposely reduce power (QRP) for fun, the military doesn't
*We have antenna measuring contests, the military doesn't
*We work meteor scatter for fun, the military doesn't
*We're under control of the FCC, the military isn't
*We build and modify radios for fun, the military doesn't
*We go to swap meets and bargain for junk, the military doesn't
*We have radio club meetings, the military doesn't
*We think of radio as a hobby, the military doesn't
*We have DXpeditions, the military doesn't
*We carry HTs in our belts to look official, the military doesn't
*CW is our second-most used mode on HF, not so with the military
*We still use AM on HF, the military doesn't
*We have antenna restrictions imposed upon us, the military doesn't
*We have power restrictions imposted upon us, the military doesn't
*We work SSTV, the military doesn't
*We debate on the radio newsgroups, the military doesn't
*We have a limited budget to spend on radios, the military doesn't

i have a ge master 2 repeater station combination
i need parts
open the front panel and you can see where the receiver and transmitter
and were the receiver is ,,it mounts in a rack or support unit
number 19b226035g2 that the sides and the rear 19b226105g2
frame 19c320664g1 and a system board a901 ..19d417213g1
on page 15 at the right top you can see it
also need
10-volt regulator & control card
repeater audio card
repeater control card
if you have something like this or if you know someone please
pass this along this is being use in ham radio repeater's
you can call me nigth's 930 pm to 1130 pm 724-588-1883
or e-mail me mmowery@toolcity.net ke3jp@yahoo.com
thanks mike mowery ke3jp

3764. Re: VX-5R CTCSS problem....

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-15 00:00:00 UTC
From: Francis <ve2fgs@videotron.ca>
Message-ID: <coZx2.1085$qb4.601@weber.videotron.net>
Source record: 150472

Thanks Chris for your reply. I will add this cute little message to the ones
I already have in my VX-5R's problem backup file...

I sent a message to Yaesutech about two weeks ago (the day I bought the
radio) and they never answered me... Yeasu really have an excellent support
and I want everyone to know it.................

Francis VE2FGS
ve2fgs@videotron.ca

Chris Conklin (n0cf) a &#65533;crit dans le message
<36cba524.30880283@news.cfu-cybernet.net>...
|Just followed this thread over from another NG....
|
|Someone else correct me, but the two VX-5R's I've touched are deadly
|slow on PL decode times (around 1.0 seconds). On repeated trials with
|all EIA tones from 67 to 203.5, the decoder always takes 750ms to
|decode after receiver lock occurs (the VX-5R is typical to PLL
|receivers- 50ms or so) and sometimes exceeds 3 seconds. Under
|repeated tests, there doesn't appear to be large differences between
|decode of low frequency tones and decoding high tones.
|
|Other notes: on a busy RF channel, the time between removing PL (while
|continuing a dead carrier) and the time the Yaesu VX-5R mutes audio is
|1-4 seconds also (slow muting / slow de-recognition of tone decoding).
|
|Unlike most HT's which use a discrete PL decoder IC, the VX-5R uses
|two or three active lo-pass filters and feeds the resulting 'data' to
|a pin on the main CPU. This CPU does all the display, PLL, PL/DCS
|encoding, battery monitoring, charging, lamps... etc.
|
|The DCS (DPL) decoding times are 'normal' at around 250ms like all
|CommSpec, Motorola etc decoders. The DCS decoding is done on a
|separate CPU input, and has an additonal buffer amp stage after all
|the low-pass filtering from the discriminator that is common to PL and
|DCS.
|
|My bet: Yaesu had trouble with decode falsing and 'cheaped out' by
|requiring a longer true logic state from the decoder before unmuting
|audio than every other decoder known to mankind requires.... although
|the inconsistant decode times seems at odds with this theory.
|
|Are others experiencing this? Anyone else miffed at this? (Ft-470,

|530, 51, 50 don't have such bad decode times- Yaesu really screwed
|this one up.

We have the technology, we could build this. A bit of nomenclature
change is needed however. Instead of "calling channel" the proper
term is "control channel", and instead of "working channel" the
proper term is "trunking channel". Works for cops and sanitation
crews. Works in a slightly different form for cellular phone too.

What two modes does the "average joe" have available to him when there's an emergency or when he simply wants to get on the air while out camping away from power-plugs or while driving cross-country and has a car-prob?... Is he going to push a button and have his battery-backed-up satellite-communications something-or-other slowly appear out from under the dash, or is he going to unclip the HT from his belt?... Or maybe even run a line from the car-radio directly to the battery if the cars' problem is in the electrical-system?...
Think about it..... All those "fancy-smancy" 'modes' wont do most of us any good "out in the field..." I carry a simply 2m/70cm HT and have one installed in the car. I don't even have a generator sitting in the garage..

Actually I must be honest and say that I did miss your point, was the point that the ARRL was responsible for the dumbing down and ruination of amateur radio? She may believe that to be true but when I read your statement "She WOULD have been a great ham" it makes me wonder why you or your daughter would allow a publishing company in Newington to control or influence your daughters destiny to follow in your footsteps, epsecially since the license proposal is just that, a proposal.

Additionally at 14 it would seem to the casual observer that she's had some pretty heavy influences regarding this issue. My two boys are learning code right now and I assure you they could care less what others know or don't know or what class license they hold. Their more interested in playing radio with Dad, which they will. I hope your daughter does someday too.

> JUST THE FACTS, MA'AM!!!!!!!

There are at least three proposals out right now. One from the
FCC, another from the ARRL, and yet another from a committe formed
by the ARRL. There may be several more. Each one has different
ideas about what to do with existing license classes. My guess
is that the final outcome is going to be a mixture of all of them.

All of these proposals are available on the ARRL web site.
Read them yourself and than take a guess at what's going to
be the outcome.

Martin

>(Channel 16 in the VHF-FM marine band). The technique of randomly
>choosing a frequency and making a hit-or-miss call is unique only
>to our service.

Jeff,
I agree and have said the same thing. Indeed, the
closest we come to such designated calling frequencies
are those that are commonly used on VHF and UHF (e.g. 50.125
for SSB, 52.525 simplex FM, etc.)

Even if it was only a calling frequency on just
two or three of the amateur HF bands, then we'd all
at least have something to monitor continuously.

I'd suggest a frequency in at least the 80m, 40m,
10m, 15 and 20m bands. Sure makes good sense
to me. As it is now, there isn't a single HF frequency
that I can set my HF rig to and just leave it with
any probability that someone might make an
emergency call that I'd pick up. Indeed, most HF
rigs today can be set to scan a set of frequencies, so
monitoring of 5 frequencies on a scanning basis
would be simple for many people.

Heck, even CBers appear to respect the
sanctity of Channel 9 as being only for
emergencies.

Cheers,
Bill K2UNK

I've been reading half-assed attacks on the FCC for about 40 years. If you want to see what the airwaves are without them, just check out the frequencys the FCC has given up on, namely 26-28 mhz. Now these fools want to bring the same chaos to the broadcast bands.
I have my flamesuit on. I won't be reading your responses, because there is no possible defense for pirate radio broadcasting.

The idea of Microradio is unworkable, available channels are limited, but we seem to have an unlimited number of losers who think they have something to say.

Get an education, and enter the business legally.

:Paranoia? You poor, brainwashed individual. Do you really think the
:government protects our best interests? No, they don't. They are only
:interested in protecting their own. I don't view their message as being
:spam. Did you even look throught their site?

Look the agencies are more partisan than any political party.
The Federal agencies fight each other, for god's sake!! Of
course they don't have our interest at stake. And they have
played Clinton like a sucker.

:
:Let me point something out here:
:
:Clinton got away with perjury.
:
:If we had commited perjury, don't think we'd be in prison now? I'm sorry,
:but the government is a highly corrupt organization and is in need of major
:reform.
:
:I've done a couple things in the past 3 years to get me in serious trouble.
:On one occasion, I transmitted on a police frequency. I was charged with a
:misdemeanor and all I got was a slap on the wrist. I paid court costs, did
:public service, and was on conditional discharge for 18 months. Just
:recently I did something wrong, and instead of the company pressing
charges,
:they terminated my employment and made me pay restitution. I have learned a
:valuable lesson, even though I knew better in the first place. I didn't get
:away with anything on both occasions. Why should Clinton get away with
:anything? That's bullshit! I'm not aksing for him to be put in prison or
:anything serious like that, but he should get punished, somehow.

So the rich and the powerful have different laws than the rest of
us. So liberals are trying to bring back the middle ages. Since
Monica, the Democrats have become the party of cocksuckers.

I have no problem at all understanding the phrase "most reliable form of
communication" ... it's obvious from your response that YOU are the
one who is clueless WRT the meaning of that phrase and that you've
been totally brainwashed by the "Morse Myths."

> What it means is that under severe operating conditions you will be
>more likely to get your message through with CW than any other mode.

Right ... that's why NASA and the military are both using Morse (NOT!)
to overcome the high path losses in space probes and the hostile
jamming environment in tactical communications ... (you're making
me laugh ...)

[almost endless litany of absurd "what if" scenarios deleted]

>If the FCC decides to do away with CW testing for licensing then so be it.
>Majority always rules anyway.

Actually, I've publicly stated that, even though the no-code position
garnered more than TWICE the support of the ARRL position in
the recent NPRM comments, the ultimate decision should NOT
be simply the result of a popularity contest like "poll" of the current
incumbent licensees ... the FCC has both a Congressional and
a public interest mandate to eliminate unnecessary regulations
and restrictions ... and the mandatory Morse test clearly falls into
that category.

Bob,

I guess you to found that these batteries are hard to come buy. If you cannot find them then do this. Take a hot air gun and heat up the old battery case. This will soften up the tough glue that holds the top and bottom halfs of the case together. They are glued to each end of the batteries. Pry apart the case and replace the batteries with nicads.

Hope this helps.
Gary

What an odd question! My proposal is about amateurs using radios in the public service. It is the very heart of what Ham radio _should_ be about, even though most Hams could care less about community service and are happy to simply rag chew on 2 meters or clog up HF with their silly contests.

Microradio could make Ham radio relevant again.

Sincerely,
Curts

i don't think so...

51 was used for a wide variety of receivers (such as 51RV being an aircraft nav receiver...)

i don't know if you can get to the equipment type listing from the outside..start at http://www.collins.rockwell.com and see if there's an entry for that. (or check the publications indexes that are available from there...)

HA! Well guess what! I am in the military (18 years) and I am a communications specialist. The military has used CW for years and still does! If you knew anything about military radio communications equipment you would know that aside from the FM PRC77 you hump around on your back most every military radio has CW capability. Also the FCC may do away with CW but the requirements for a job such as mine in the military has not. You really need to back up and regroup and get your facts straight. And as far as the other comments on deep space communications goes, COME DOWN TO EARTH!!!

Oh yea, I would be glad if you would list those military modes because I know you can't!

PLEASE!!!

I think you all are missing the point. I've just passed my 5 wpm code test and hope to pass my 13 and 20 wpm tests soon. I think that code does not have the usefulness it used to have, but it does require hams to show a little initiative and self-control -- traits that should be encouraged for those who want increased operating privileges. I think the idea of the no-code tech license was a good one, because it allows amateurs to have a "taste" of ham radio. They can then build their skills, and thus build their privileges.

Dunno.. I can "hit" one repeater about 5 miles north of me and another about 10miles east of here on 440 with my 300mw "credit-card" Alinco, and NONE on 2meters.. And, yes, there's a few 2meter repeaters closer than 10miles, but it may be because of a building in between them while there is none between the 440 repeater, or "any # of other things", for all I know... I'm right in the center of the DFW area, btw.

Use any software capable of printing cards and get some Ham clip art
from the web somewhere. There are tons of programs available, Print
Shop Pro is one that immediately comes to mind.

>study books again.

Perhaps you should spend a bit more time studying the technical side of
communications and less practicing Morse. Then you'll discover that
OOK Morse is *not* the most reliable mode of communications. That's
Morse Myth #1. It is false, and we've known exactly why it is false for
50 years (since Shannon's original paper on information theory was
published).

If your assertion were true, deep space probes like Voyager would be
using OOK Morse telemetry, and ranks of headset wearing Morse
operators would be copying it. But the signals from Voyager are so
weak that they aren't even audible to the human ear at this distance,
even with the DSN's big dishes and cryogenically cooled receivers.
But the signals can be copied fine by machine, because they are
coded in a form that is much more robust and reliable than Morse,
and because they are modulated using a technique which is 9 db
better than OOK.

If your assertion were true, the military would still be employing
Morse operators to push their signals through jamming. But they
don't. They use superior techniques to cope with jamming and
interference on the battlefield. Etc.

In short, you're wrong, and it would be to your advantage to learn
why you are wrong. I'd recomend "Digital Modulation and Coding"
by Wilson as a good text to learn why OOK Morse is considered
one of the *worst* ways to transmit text by radio by those whose
job it is to design systems to work in adverse conditions.

Bill:

Thanks for that information. That is exactly what I was looking for when I asked if there was anything in the cellular system's implementation which might cause problems with a long conference call.

Thought I worded my original post carefully enough to discourage all the knee-jerk reactions, but then again this is rec.radio.amateur.misc. Your post is an exception, and a welcome one at that.

Sure you can. Just keep the code tape running while you're busy with
other activities - no need to write down anything. We call that "head
copy."

>You're not saving too
>many lives with CW while you continually spout off on the net either.

We'd have to have a distress frequency set aside on each amateur band
to be sure of catching each and every such call. It would be a simple
matter of keeping a spare receiver set on that frequency while going
about one's other activities.

I don't know about Dick, but I keep the 500 kHz receiver turned on every
waking hour of the day, no matter what I'm doing.

3801. Re: VX-5R CTCSS problem....

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-15 00:00:00 UTC
From: cc13125@cedarnet.org
Message-ID: <36cba524.30880283@news.cfu-cybernet.net>
Source record: 150540

Just followed this thread over from another NG....

Someone else correct me, but the two VX-5R's I've touched are deadly slow on PL decode times (around 1.0 seconds). On repeated trials with all EIA tones from 67 to 203.5, the decoder always takes 750ms to decode after receiver lock occurs (the VX-5R is typical to PLL receivers- 50ms or so) and sometimes exceeds 3 seconds. Under repeated tests, there doesn't appear to be large differences between decode of low frequency tones and decoding high tones.

Other notes: on a busy RF channel, the time between removing PL (while continuing a dead carrier) and the time the Yaesu VX-5R mutes audio is 1-4 seconds also (slow muting / slow de-recognition of tone decoding).

Unlike most HT's which use a discrete PL decoder IC, the VX-5R uses two or three active lo-pass filters and feeds the resulting 'data' to a pin on the main CPU. This CPU does all the display, PLL, PL/DCS encoding, battery monitoring, charging, lamps... etc.

The DCS (DPL) decoding times are 'normal' at around 250ms like all CommSpec, Motorola etc decoders. The DCS decoding is done on a separate CPU input, and has an additonal buffer amp stage after all the low-pass filtering from the discriminator that is common to PL and DCS.

My bet: Yaesu had trouble with decode falsing and 'cheaped out' by requiring a longer true logic state from the decoder before unmuting audio than every other decoder known to mankind requires.... although the inconsistant decode times seems at odds with this theory.

Are others experiencing this? Anyone else miffed at this? (Ft-470, 530, 51, 50 don't have such bad decode times- Yaesu really screwed this one up.

it does the market maker's ('fest sponsors) no good to have all the dealing done by the insiders before the paying public arrives.

you see this in shopping centers and malls across the country, too.

i tried going to some of the small shows, until i realized there was no way for a non-insider to have an even shot at the merchandise.

that's a loss for the event sponsors (reduced attendance fees).

and i've been to a few shows where people were bought out and there were quite a few holes in the exhibit floor and the show operators being unhappy since they could have filled those spots with someone who really wanted to sell to the public.

the market makers are expecting to deliver to you customers. those customers will go away unhappy if there's nothing to buy. if the product suppliers manipulate the market, that's more of a restraint of trade than any starting time limit could be.

Dunno... It's like the classic-car clubs around.. Some people buy old cars
and pretty much turn 'em into new cars with all the hi'er-tech cr*p they
install in the things.. And some people refuse to admit them to the
'classic' clubs because of it. I also see it that way. If I wasn't
interested in learning the traditions/history of radio, I'd get a cb or
something.
And part of that's 'code'... Most of the no-coders, I know, do see it as
just extended-cb.. Nothing more. Buy a radio, install it, and talk on it..
None of the tradition of learning how/why it works "or anything like
that..."
And, yes, I'm also currently a no-coder...

Date: 1999-02-15 00:00:00 UTC
From: Gary <catlink@erols.com>
Message-ID: <7a8gh3$n3$1@winter.news.rcn.net>
Source record: 150544

Sorry Carl, I hate to bust your bubble but your way off base. CW is the most reliable form of communication but you don't seem to comprehend what that means. What it means is that under severe operating conditions you will be more likely to get your message through with CW than any other mode. Also if your computer and binary FSK decoder happens to go down while your stuck out there in the middle of the boonies you can use CW to get your message across. Or, if your mic fails and your equipment doesn't allow you to operate CW such as with a voice only marine type radio, you can create a makeshift PTT to send CW. Or if your stuck in a cell you can talk to your buddy next door by tapping on the wall.

If the FCC decides to do away with CW testing for licensing then so be it. Majority always rules anyway. But as the old saying goes, "all good things come to an end". Amateur radio will indeed be fun for years to come and will conform to every new change but change doesn't necessaryly mean better or whats right.

And Christopher, as far as those higher-classed hams go, don't you believe that they are all where they are because they are some sort of code expert. I know more than one extra class ham that not only doesn't know a bit of code but couldn't even tell you what the ring around a diode means. You see thats another problem. The past few years there have been many hams who got there license under the good O'l boy system. You know, a friend doing a friend a favor. Don't take me wrong, there are more good hams than bad (as of today). But there are also more people that would like to take the easyest way out to get their license. Like todays "Hi Tech" ham that would only need a keyboard.

I personnaly do not see anything wrong with having a set of frequencies set aside for a no-code ham or licensing hams to operate amateur radio without knowing code. But I also beleive there should be a set of frequencies set aside for only CW to insure the communication of emergency traffic and to add incentive to those who want to become a better ham :)

Sincerely,
Gary

I didn't see any "knee-jerk" reactions. Tim's comments were right on target, such as requiring headsets (fatiguing to hold a phone up to the ear for seven hours), air time (who'd pay for the 11,000 minutes?), open mics (26 cell phones continuously transmitting to each other means every cough, sneeze, and utterance would be heard by all listeners), batteries (seven hours of continuous transmitting would require at least three batteries per phone). Another factor to consider is that each user would have 800 MHz RF bombarding their body for 7 hours.

I think we've beat this topic to death - cellular phones are not a good substitute for ham radio during public service events.

>Would you if you liven in Kansas? :-)

Kansas? Isn't that east of Hawaii County? Quit testing my knowledge
of geography, Cecil!

But I must ask, why didn't hams consider instituting a calling and
distress frequency on each band, similar to the maritime folks?
The FCC suggested such an idea back in 1952 but received only
negative comments from hams. Here's how it would work: Everyone
would monitor the calling frequency. To initiate a QSO, a station
either sends a short CQ or calls another station; once contact is
established, both parties move to a "working" frequency. This concept
worked for 80+ years on 500 kHz (CW), some 50 years on 2182 kHz
(AM, then SSB in '75), and for the last 25 years on 156.80 MHz
(Channel 16 in the VHF-FM marine band). The technique of randomly
choosing a frequency and making a hit-or-miss call is unique only
to our service.

Same here only I use MS Word 7.0, really nice for short runs of special cards, I've also set up a template to print text on the back of the cards and address them but it's quicker just to write it in. I'll be happy to email the template I use for the front if it helps anyone with ideas.

Maybe you had better tell that to the military. They would be interested in the mode "more likely to get your message through than any other mode". Get real, Gary. You are just showing your ignorance. Many modes operate under the noise floor where human beings cannot even hear them.

> If the FCC decides to do away with CW testing for licensing then so be it.

> come to an end".

CW operation will not end. Morse code testing is not a "good thing".

> But I also beleive there should be a set of frequencies set
> aside for only CW to insure the communication of emergency traffic ...

Gary, on what CW frequencies is that emergency communications being practiced?

This one I have to agree with. You can be as smart or dumb as you want to be. Just because you can memorize enough answers to pass the extra test doesn't mean that you immeaditaly posses the knowledge to build your own HF station from scratch. Yet there are no-code techs who are putting together micowave stations from plumbing supplies. You set your own goals - it has nothing to do with the ARRL or license class.

You might consider CU See Me a video conferencing software or MS NetMeeting, the same thing. Many will log in with thier location etc. The only problem is you need to weed though the never ending "sexual oriented" chats. A quick search of QRZ.COM shows that W6REU is no longer in use.

ZCZC
SB ARLX002
Newington, CT
February 15, 1999
To All Radio Amateurs:

The following new satellites were announced today:

GAYSAT- Funded by Lambda, design flaws are expected to add a lisp to all SSB signals.

LESBOSAT-Funded by Lambda, a post launch mishap has resulted in SSB signals losing higher audio frequencies in favor of low ones.

BLACKSAT- This satellite is not expected to work a day in its life.

HISPANISAT- At age 15, this satellite should start releasing smaller satellites by the car load.

ANGLOSAT- The makers of this white satellite have placed it in a orbit where the sun never sets (they think).

PIZZASAT- Named for its red, round shape and large white dish antennas for the microwaves.

EIRESAT- This satellite has had difficulty following a straight line late on Friday and Saturday nights.

BUNDESAT- It is expected this satellite will conduct itself in a calm, orderly, calculating, methodical manner.

SUPREMICISTSAT- This satellite is currently under a white sheet in the lab.

HILLARYSAT- A real bitch to operate.

MONICASTAT-7 - This store and forward satellite carries information on sexually transmitted diseases.

NNNN

Gary--

Local emergency traffic is vhf phone. International emergency traffic is ssb phone . During the recent hurricanes in Central America, the FCC preempted certain phone frequencies on 20 and 40 meter SSB. Wake-up, join the 21st century.

The only problem I can see with this concept is that there
would always be some slopehead camped on the designated
frequency clamiing it as "mine". I think it is an excellent
idea that should be promoted and the slopeheads educated, if
possible, ex'communicate'd if not.

If hams had the same mission and same funding as the military,
then most of the distinctions below would be non-existant:

Why ham radio is not dependant upon what happens in the military:

*We ragchew for hours, the military doesn't
*We install repeaters that duplicate coverage of already existing rptrs,
the military doesn't
*We use rptrs when simplex would suffice, the military doesn't
*We have on-the-air contests, the military doesn't
*We bounce signals off the moon (EME) for fun, the military doesn't
*We purposely reduce power (QRP) for fun, the military doesn't
*We have antenna measuring contests, the military doesn't
*We work meteor scatter for fun, the military doesn't
*We're under control of the FCC, the military isn't
*We build and modify radios for fun, the military doesn't
*We go to swap meets and bargain for junk, the military doesn't
*We have radio club meetings, the military doesn't
*We think of radio as a hobby, the military doesn't
*We have DXpeditions, the military doesn't
*We carry HTs in our belts to look official, the military doesn't
*CW is our second-most used mode on HF, not so with the military
*We still use AM on HF, the military doesn't
*We have antenna restrictions imposed upon us, the military doesn't
*We have power restrictions imposted upon us, the military doesn't
*We work SSTV, the military doesn't

*We debate on the radio newsgroups, the military doesn't
*We have a limited budget to spend on radios, the military doesn't

If the person's skin resistance remains fixed, then an increase in
voltage would mean a proportional increase in current: R = E/I; you
can't have E increase without also I increasing.

Hi,

I've recently bought a house that has an alarm system installed. The alarm sensors and control panel communicate with one another with a wireless signal (319.5 MHz).

Question: Has anyone here had any trouble with interference between a home alarm and their ham rig? I don't want the alarm system to make reception difficult on the ham bands, and I don't want my rig setting off or disactivating the alarm.

Anyone had any experience with this?

Alan D. Bulley

3839. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7acthc$r7m@news.Hawaii.Edu>
Source record: 150378
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

3840. Re: VX-5R CTCSS problem....

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-16 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <36C9FA59.8BCDFB6F@quantacorp.com>
Source record: 150379

Chris:

I have a VX-5R 8L010XXX, and the CTSS decoding really seems broken by design. I measured delays between a ft-50 and a vx-5. I measured current on the TX radio, SPKR audio on the RX one (delay from current rise to good TX signal not considered):

VX-5R transmitting, FT-50R receiving:

1. no tone: 70ms from PTT down to SPKR audio
2. 250.3 tone: 220ms
3. 67.0 tone:420ms
4. 023 dcs: 220ms

FT-50R transmitting, VX-5R receiving:

1. no tone: 70ms from PTT down to SPKR audio
2. 250.3 tone: 450ms most of the time, up to 1.5s
3. 67.0 tone: 750ms most of the time, up to 3s (THREE SECONDS!!!)
4. 023 dcs: 330ms

The approach of having the CPU/firmware being part of the detection might have worked OK on their initial tests when the firmware was small and not taking care of many other things, but it is certainly broken now. The earlier reported CTSS scan bug is just a symptom of the slow ctss decode. This 'new' problem, specially the intermittent long delays (3 seconds sometimes) is much more serious. The CPU is probably missing interrupts or losing sync with the ctss circuitry due to other tasks. This will probably require a major fix from YAESU, perhaps even adding full external decode circuitry in a new revision/lot. The real question then is how will they handle the beta testers that got these early radios.

Best regards,
Jose R. Camara

>Get an education, and enter the business legally.

The reason the CB band is a mess is because no one was allowed to establish a broadcast station with a legal right to protect it being recognized by the government. CB is point to point transmission, and in its very nature, is an unstable, unpredictable collection of random transmissions. In addition, its propogation characteristics present additional problems which do not plague the FM broadcast band, except in very unusual situations such as approaching hurricanes and large storm lines perhaps once a year.

To say that there is no defense for pirate radio broadcasting is to say that there is no defense for green gremlins in space. Neither entity exists. The terms "pirate" and "radio" are unrelated--one has to do with criminal acts on the high seas, while the other has to do with science of electronics.

I can read between your lines though, and to this I will say there is no defense for the existence of a destructive government monopoly on the airwaves. It is only due to public ignorance that the Hoover administration was able to fool the public into believing that the "ether" was any different than land in the untamed west about the time of 1864. I shall quote from Ayn Rand's "The Property Status of Airwaves":

"Any material element or resource which, in order to become of use or value to men, requires the application of human knowledge and effort, should be private property - by the right of those who apply the knowledge and effort."

All resources are limited,.and there are thousands of people in possession of a great deal of education, who cannot afford to buy into the "mafia" organization which interrupts free enterprise and places all broadcasters at the arbitrary and capricious whim of a government agency who cannot even

define "the public interest."

I have had a DSC system for a few years. My HF operation on occasion
causes the sonalert on the pushbutton control panels to beep and the
LED's to light. Have not ever caused the system alarm to go off or
malfunction,though. I have not tried putting chokes on all the many
wires they ran thru the house, but might try it sometime.
I also receive QRM from the main CPU controller. Get nice telemetry
signals right at 28.000 and multiple spurs above and below.
Makes for difficult CW operation at low end of 10M (when not
dodging the Spanish ssb/fm QRM).

I have an extensive home alarm system which utilizes both hard wired as well as wireless sensors to communicate with the "brain" or control computer. The alarm was installed by Westec Security, and I don't recall the model number, but it is the best unit that they offer.

I have operated most HF bands and modes (except 160) with both the rig only at 100 watts, as well as with an Ameritron 811H at around 800 watts. This is fed to either a Cushcraft A-3S at 65 feet, or a home made dipole at about 50 feet. So far, I have had no problems with the alarm interfering with the rig or visa versa.

I also operate all mode 2 meter and 440 with 200 watts on 2 meters and around 90 watts on 440, fed to 13 element yagi's. Likewise I have had no problems concerning the alarm system. Now if I could only say the same for the cordless phones... :>).

3846. Help on 1/4 Wave coax radial

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-16 00:00:00 UTC
From: lou9862@catholic.org
Message-ID: <36ca1205.0@news3.enter.net>
Source record: 150385

I would like to use a quarter wave shorted coax line for a
ground radial for my antenna. Which of the following
configurations is the correct one?

```
----------------------| At far end
1) X-------------------------| inner conductor
----------------------| shorted to braid
```

where X connects to inner conductor and to feedpoint ground,
outer braid open

```
2)
-------------------------| At far end
--------------------------| inner conductor
X--X-----------------------| shorted to braid
```

where X connects to outer braid (inner conductor open)
and to feedpoint ground

```
3) |--------------------------| At far end
X--|--------------------------| inner conductor
|--------------------------| shorted to braid
```

where X connects to short between inner conductor
and braid and to feedpoint ground

Thanks for your help

Mister Scoffer, do you know what the story is? The following is an "educated guess" based on knowledge of what happens "on the streets".

Section 301 is unlicensed operation, i.e. bootlegger. $11K is the penalty "dialog opener". Noticer the "repeated" operation in the charges.

No doubt what happened is that there was a complaint of harmful interference which was being investigated and lo-amd-behold, Taco Time was using an unlicensed radio system, probably to talk from the drive-up window to the cashier/order person. The hand was caught in the cookie jar - these systems have to be licensed in the Business Radio Service.

These situations are far more common than they have to be. The last time that I dealt with one of those cases, the system was throwing all sorts of spurious signals into VHF radio channels used by Federal law enforcement agencies, and the drive-through owner thought that his gourmet yuppie hash house operation was more important and refused to stop using the system until it was licensed and fixed.

He got hit with $20K under the old guidelines.

Ah, but it was said that CW gets through better than any other mode. That
is patently false. You and your cronies can vote on it all you want.
It is still false. The truth is, if it were true, the military would
use it and depend on it - they don't. If it were true, the deep space
probes would use it and depend on it - they don't. Mealy-mouthing
around a false statement does NOT make it true. Changing the subject
does NOT make it true. Mounting an ad hominem attack does NOT make
it true. In short - nothing makes a false statement true.

You need to rephrase the question slightly. Shortwave implies a band of frequencys for example 2-30MHz. SSB or Single Side Band is a modulation type, in other words, the way the signal is transmitted. AM Broadcast stations use a carrier and when mixed with audio you get an amplitude modulated signal. For efficiency an SSB signal removes the carrier but the the reciever artificially reinserts it so you can detect the audio. This is a very simplistic explanation. So to answer your question (I think) SSB could be used on ANY frequency shortwave, longwave, microwave as well as AM, FM or any other modulation type
SSB has nothing to do with shortwave or in other words the frequency that it is transmitted on.
Sorry that's the best I could do. :)

Folks,

Radio can be either a business or a personal pastime, but their spectrum allocations should be distinct. Many people are making a living in commercial broadcasting, and it would be a crime (in fact, it is..) to interfere with that. CB, Ham, GMRS and FRS are a few of the non-revenue forms of radio that are available to the public. Since these are all

reserved for two-way communications, perhaps there should be a segment of the spectrum set aside for microradio broadcasting. It just shouldn't be in the existing commercial broadcast spectrum. If microradio is such a community asset, then people wouldn't mind listening to it on their SW radios or using converters to place their FM stereo systems on some new microradio VHF/UHF band.

In case you don't read much just last week they determined that the
AIDS virus is common (without harm) in chimpanzees and most likely was
passed to humans when they ate some un/under cooked chimpanzee meat.
In some African nations chimpanzees are still a food source

Hi,

I installed WINORBIT and compared the Keplerian data from MIR in the
database with those I got from another website. They were quiet
different and those from the website have a bath checksum.
Somebody can help me with the right Keplerian data ?
Thanks and greetings

Paul

Why couldn't you just change the date on the computer
right now, to 2000? There is nothing special about
the particular time. It won't care when it becomes 2000.

We did this on all of our computers about 5 years ago.
Worked wonderfully. Fixed all the bugs before all this
stupidity started. So, indeed, "they" actually can learn
what software routines will fail.

They obviously use CW for monitoring. Someone reported that nowadays
that monitoring is usually done by computer. Does the military use
manual CW regularly for the transfer of information? yes or no.

You could do that but you cannot test all the routines. Some
routines run only when certain combination of real-time events
occur and there's no way to test all combinations.

> We did this on all of our computers about 5 years ago.
> Worked wonderfully. Fixed all the bugs before all this
> stupidity started. So, indeed, "they" actually can learn

Only if they run all possible combinations of the routines
interactively. And a certain percentage of the Y2K fixes
introduce new bugs that weren't there before the "fix".
You are premature in saying, "Worked wonderfully/" Get
back to us in a year.

Hi Cecil, I gave up trying to "educate". If it wasn't real they would not be spending such a great amount of money fixing it. If nothing happens, you and I have lost nothing. If all hell breaks loose, they better not come knocking on my door!! Since I have stored a small (4 week) supply of food and water (don't forget meds) it has come in handy a few times already. Like all the water main breaks. (three in the last two days). Like being snowed in for a few days and missing a normal food shopping day. A comment from our office of emergency management is "We think it's great, all the hype about Y2K. People are doing what we have been telling them to do for a long time. Prepare yourself and home for short emergencies." "Look at the way people hord just before a huracane" "With this Y2K thing going to happen at a given date, it's great, because we know when the emergency is going to happen." Anyway, we are preparing for the worst, hope for the best and take what comes. Something mom taught me when I was very small.....73 Shanon KA8SPW

3892. Ten-Tec QRP CW Transciever Kits - Key Question

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-16 00:00:00 UTC
From: dber@tiac.net
Message-ID: <36c9b3dc.330561173@news.tiac.net>
Source record: 150452

Hello,

Wanting to build something and save some money I am close to buying the $95 Ten-Tec 40M CW kit (3W output). I think I'll get $95 worth of enjoyment out of it but I had a question on getting a key. I think I want to spend as little as possible but would like something easy to hook-up and use. Unfortunately, Ten-Tec did not sell a simple straight key (the cheapest it would cost would be half the cost of the rig). The kit will have 3 phono-jacks on the rear for key input. When I go to my local electronics store and get a simple straight-key (I think I saw them in the $15 range) do I have to also get specialty cables or will the key come with "standard" phono cables to connect to the rig? If I have to make my own cables to hook-up is this difficult? Also, why are there 3 inputs on the back for the keyer - I would assume just 2 would be needed for a straight key.

Thanks in advance for any help you might give!

Regards,

Dave

Youre right, Tim; he's a disc jockey. Disc Jockey's tend only to hear that the numbers are good, the audience knows nothing but them and that the music is only there to give them necessary seconds for the neat shit they have to say. Albert Brooks had a great bit on disc jockeys in his monologue about the time he opened for Richie Valens.
Be amused...Be very amused. Its the only laugh he gets.

As pointed out already K6SEX is a callsign that does not belong to a man named
Ben Dover. But don't take my word for it, check one of the several call sign
databases.

So Mr. Ben Dover, who are you and what is your real agenda? How do you
stand to profit taking part in these debates?

It makes me wonder how many of the nasty messages posted regarding ARRL /
code / nocode / etc issues are really done by people who are not amateurs and
have some hidden agenda of their own.

Tom

>What would travel farther, 1 watt at 150Mhz, or 1 watt at 450 Mhz? Simplex
>radio to radio..and some buildings and other obstructions.

It would depend a great deal on the type of terrain you expect to be communicating over. Back a few years ago, we did a ground search and rescue excercise in a remote woods location here in New Brunswick. The rescue van on the side of the road had a 40 watt UHF base station on 415 MHz with a 5/8 wave antenna on the roof, plus a 5 watt Motorola P200 portable on 150 MHz (using just a rubber ducky antenna). Half of the group was on UHF and the other half on VHF. Once the on UHF had ventured into the woods 1/4 mile, the rescue van could no longer hear their 4 watt UHF portables (and they said they could barely hear the rescue van). However, the VHF portables had no problem whatsoever even up to a mile away in dense woods.

I would expect that if you're going to be less than line of sight from one another or behind a hill, VHF would be the best choice. If you expect to operate in a "concrete jungle", then I would expect the UHF to have better penetration and might provide a better signal.

Hope this helps.

>Mr. Bill Pasternak, WA6ITF, will not respond...

Bill sent me a very nice unsolicited note explaining the costs of
running newsline. Maybe if you ask him nicely he will respond to
your query. Calling him a "slimeball" in public but not signing
your real name won't earn you a response, though. In the meantime,
you need to "chill out" and not let it bother you so much; turn off
your radio when it comes to that part of the broadcast where a donation
is requested - it will lower your blood pressure.

I'm going to send Bill another donation if your name, Wileyscott,
an alias. And each time you complain, I'll send another donation.

Have a productive week doing whatever it is that you do,
Jeff WH6U

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

My non ham daughter, Coral, was listening to 10 meters and I asked her her
reaction and she said this, "When you look up boring in the dictionary it
should have a picture of a ham radio."

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. How to pass the A+ Certification
2. See Hillary do something naked.
3. A blond naked chic being held by a female ham!.
4. Take the Burt Poll, about Clinton ham spouses, girlfriends
5. Attacks against Burt K1OIK's opinion of ham radio in a national publication
for broadcasters
6. Burt's opinion on the First Affair in the White House with a picture of the
new first couple.
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. A test for your SVGA monitor
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

Quite the contrary. You DID get away with something if that's all that happened when you transmitted on a police frequency. It could have been a federal offense with a hefty fine. And, by your own admission, your company could have pressed charges in the other incident, but chose not to do so.

The last part of your post is encouraging...that you have learned (or re-learned) a lesson. Keep up the good work!

Hello.

Are you an Kansas City Tracker user ?

Than mabe you wil share some information ?

I'm collect all the names of programs that works with the KCT !
It doesnt matter what for program !
Than I'll make a list of it of all available programs and put it on my home page so that all user of this card can see the software possibillities !

PLEASE, vissit my homepage http://www.ping.be/~p4u11324/ and fill in the KCT Question form.

Geert Pirens
Vissit my home page: http://www.ping.be/~p4u11324/

3919. ATTENTION to all Kansas City Tracker USERS !!!!

Hello Kansas City Tracker Users.

I'm collect the names of all the available programs that being written, or suppot the kansas city tracker.

All these information wil be placed in a Database and wil be available to all of you.

On my homepage http://www.ping.be/~p4u11324/ you wil find a list of all available software.
If you know a program that not being in the list, PLEASE fill in the Question form:

If you click here, you go wright to the question form
http://www.ping.be/~p4u11324/KCT_Ques.html

Thanks to all of you !

I don't know a thing pro or con about Art Bell but as far as Wayne
Green you can go over to his website and read about his "Aids Cure."
By simply running a low voltage and a few mills of current through
one's ankle it'll kill the Aids virus , plus other healthy things.

And if you turn the voltage up a tad, it will also kill the sickness known as
"homosexuality" which most likely caused the AIDS virus in the first place.

>
>I'll sign your petition.

Ah yes, silent periods! For phone, three minutes at both the top and
bottom of the hour (xx:00 to xx:03, and xx:30 to xx:33), could be set
aside for emergency calls, just like the mariner's 2182 kHz, USB. For
CW, we could use the two three-minute silent periods of xx:15 to xx:18,
and xx:45 to xx:48, which were used on the mariner's 500 kHz, CW, for
some 80 years.

Now, what frequencies would you like to see designated as "Calling and
Distress"?

...hams normally use.

>Right ... that's why NASA and the military are both using Morse (NOT!)
>to overcome the high path losses in space probes and the hostile
>jamming environment in tactical communications ... (you're making
>me laugh ...)

If each of our personal budgets and missions matched those of NASA
and the military we too could cease using SSB, FM, and CW. But those
modes *are* our most popular, and out of the three, CW is utilized
when the other two won't work.

>Actually, I've publicly stated

A lot of garbage, for example:

>Join No Code International!
>Hams for the 21st century.
>Support the modernization of ham radio and help
>to assure its survival into the 21st century!

As if requiring a knowledge of code (the second-most used mode on HF)
for access to HF is hindering the survival of the ARS.

HELP!!! HELP!!!

AEROTRON Mpac VHF BASE
STATION RECEIVER NEEDED !!!

Our repeater group needs an Aerotron 60BR1
Mpac VHF Base Station Receiver, 132-174 Mhz,
to use as a test fixture and back up receiver for
two of our local repeaters. We would like to have
the complete receiver but would settle for the
receiver case with the master interconnect assembly.

You can email me at k4bwc@bellsouth.net
or you call me toll free at 1-888-798-7373 week
days or collect in the evenings at 1-919-231-2829.

Thanks.

Hi, Chris,

I am glad you liked it. The article was written by Rick Campbell, KK7B,
a well know and quite excellent author. It has been kitted by Kanga
http://www.bright.net/~kanga. I absolutely loved the stereo effect for
listening to CW; signals just seemed to jump out of the noise and
pileups. Most League members should see this project in the mail in a
day or two.

Not to keep any non-members in dark, I will make an offer that anyone
who is not an ARRL member can send me an email with their postal address
and I will send them a complimentary photocopy. I will include a
membership application, but promise no hard sell or sermon. :-)

mark,

i dont have the answer to your question. know what you
mean about 'they get way to[o] much' for the cables...

kenwood makes a nice DC pwr cable w/ the 'T'. comes on
a correctly fused also. is it me or does ICOM put the fuses
on the wrong end of the mobile rig cable supplied w/ ic-208
and ic-2710?

consider also your time is worth something. i modified two of the
icom cables and just purchased the third that i described above.

good question though, mark.

r/ msb

If you cannot figure out from the schematic what the three jacks on the rig are for, call TenTech. Their tech support is excellent.

Check out Radio Shack. Believe it or not, they used to sell a simple hand key. The key will have two connections. You need two-conductor wire to run from the key to the rig. If the rig has phono jacks, get a phono plug. One wire goes to the pin of the phono plug, the other wire goes to the outer shell.

Look at the key. Push on it as thought you are sending CW. See the to contacts that come together when you press on the Key? Make certain they are not in contact with each other or the rig will be keyed all the time. Adjust the spacing between them with the adjustments on the key.

Get with the program, Dave. We were talking about people who don't
know Morse code and would have to switch from whatever they were
using to a software CW decoding program to see if there were an
SOS there. What do you think "identify the type of modulation, switch
to the appropriate mode, and read it on the computer screen" means?

3942. FS: Used Misc Commercial Mobile Ants (Cheap)

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-17 00:00:00 UTC
From: "S.M.A.R.C." <N7RCM@POBOX.COM>
Message-ID: <7aggae$2484@enews4.newsguy.com>
Source record: 150282
Cross-posted to: rec.radio.swap,alt.forsale,rec.radio.amateur.misc

Please if at all possible, try to take as many as possible in a group. You can mix and match if you want. We don't want to nickle and dime it. If you want the whole lot, give us an offer. We want to get rid of them as soon as possible. We're not greedy

25 - Motorola 1/4 wave heavy duty black rubber base/spring, 150-160 mhz range. Were taken out of service and were cut for around 154-155 mhz. Name price.

11 - A/A 5/8 wave Low Band 42-50 mhz range, taken out of service cut to local highway patrol freq of 42.88 mzh. Name price

11 - Ant Specialist 5/8 wave w/base and spring. 150-160 mhz range. Cut to about the 154-155 range for the local PD. Name price.

10 - Larson 5/8 wave w/base load 150-160 mhz range. Cut as above. Name price.

Thanks all. Juan

3943. 2M and 440 repeater recs for San Diego and Ananheim Trips?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-17 00:00:00 UTC
From: morchar@pacifier.com
Message-ID: <morchar-1702992309310001@ip119.van4.pacifier.com>
Source record: 150283

My wife and I are going to vacation with the kids in San Diego and Disneyland for the first time in April, and would like to use our 2M/440 radios for communications to help us manage things at Sea Worl, San Diego Zoo, and Disneyland. Does anyone have any suggestions as to which open repeaters in those areas are fairly reliable from those sites, so that we can have a backup plan for when simplex isn't working for us?

We don't mind supporting a good repeater whereever we go, so please feel free to also suggest where we can send a donation to a repeater owner/club as a token of appreciation of their being open to out of towners.

Thanks,

Mike Orchard, KN7SUE (My wife is Sue, KB7WUG)
Vancouver, Washington

We have several great coverage open repeaters up here, so email me for advice if coming to the area.

Until their illegal uses impact perhaps emergency
communications, or in some way interfere with any
other legal service. Violations are violations...PERIOD.
You don't like the regulations, petition for change.

>> Are you suggesting that anyone can operate
>> a radio system without meeting appropriate
>> licensing and equipment requirements?
>
>Most are a arbitrary engineer-geek busywork sham.
>Prove anyone cares anyway
>other than neurotic hams.

Actually it is the possible intereference with ANY
other LEGAL service.

>> Are you saying the government shouldn't
>> be involved in licensing and equipment requirements.
>
>Prove manufacturers wouldn't be responsible. Prove anyone cares about
>licensing.

Buy almost any of the consumer crap on the market that
doesn't have the ability to reject RF from other
sources and you'll need no proofs.
Absent the regulations, manufacturers will make it
cheaper and will attempt to shift responsibility to
those that otherwise have legal signals but are now
viewed as interfearers.

Frankly, I still can't figure out what mindset you bring
to this discussion other than one of anarchy as
it relates to managing the RF spectrum
Do you have some vested interest in seeing such
anarchy on the airwaves or in the enforcement
arena?

Cheers,
Bill K2UNK

3946. Re: Ten-Tec QRP CW Transciever Kits - Key Question

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-17 00:00:00 UTC
From: "Robinson, AB5VH" <rc@crusoe.org>
Message-ID: <7ae0mumuu2@news-2.news.gte.net>
Source record: 150319

I think maybe the kit has an internal electronic keyer or maybe there is just provision for optionally adding one. The three jacks are probably common, dit, and dah for hooking up paddles. You will be able to tell from the schematic what the keying arrangements actually are. I can't believe there is no provision for a straight key. If the keyer comes with the kit, you can bypass it and take the key line straight to one of the jacks.

For temporary, you can make a primitive but effective key using a half hacksaw blade for the arm/spring, a drawer knob, a board base, and some screws. Also MFJ used to have one in their catalog. It was cheap, too. Try www.mfjenterprises.com or maybe it is www.mfj-enterprises.com something like that. Look in QST. they always have a half dozen pages of ads.

There seems to exist a device which can be implanted in the left nostril. This device reads a persons thoughts and transmits them via microwave radio to a receiver. It also picks up barely audible transmissions designed to change a persons thoughts or make them think they are losing their mind. Who knows if these devices can be detected or removed? A harrassing signal seems to be coming from the vicinity of 24 & C ST Omaha, NE USA...

Hello and thanks for reading. I am in need of some service documentation for the Motorola power supply marked TPN1068AA. It is enclosed within a Compa-Station marked C73MHB-1110BR. Even just a schematic would be extrememly helpful. I have several other versions of documentation for other Compa-Stations, but this one seems to be a little different. Of course I am willing to re-imburse you for any copying or shipping charges.

Thanks....
Please respond via e-mail to n3hia@erols.com

Nothing but another desperate bureaucratic agency (FCC)
with no purpose and no mission, that consumes tax dollars
and produces no service or no product. Their desperate
attempts to show they should be funded any more will soon
fail. Speaker Hastert and Congressman Tauzin are
closing in, and the FCC knows it.
BYE BYE FCC!

<SNIP> [CW] does require hams to show a little initiative and
self-control -- traits that should be encouraged for
those who want increased operating privileges.

There has been no self-control when discussing CW. Humans don't have any
restraint when discussing passionate topics.

I think the idea of the no-code tech license was a good one, because it
allows amateurs to have a "taste" of ham radio.

Whew, all you Techs, you can only have a "taste" of ham radio. It is
time to overthrow the system and get rid of these gargoyles who are
impeding entry into the 21st century.

W1AW is an entity, not a thinking person. It has prepublished schedules for it's eminentlhy useful transmissions to all amateurs. To consider it as "just another ham radio operator showing no consideration toward others" is lamebrained in the extreme. With the many ARRL bashers around and those seen here, it's a sure bet that some "slopehead" would/does set up on their prepublisbhed frequency in advance of their scheduled transmission solely for the purpose of preventing it. Of course, THAT isn't illegal.

And there is always the propagation factor. You can easily be in QSO on a frequency with a station that the other ham can't hear. You want that W1AW come on frequency and ask if the frequency is in use before beginning the scheduled transmission which is being awaited by thousands of other hams? You think it wouldn't be "in use" by said slopeheads? It behooves each ham to pay attention to what frequency he is on. If he needs to move a little to get away from W1AW he should do it instead of running his mouth.

Any software development organization worth its salt has the ability
to simulate inputs to a program in order to test boundary conditions.
You can't test all combinations, but if you test most of them and that
is usually enough. Y2K is no different.

Martin Heermance

Does anyone know a good cheap source for these components? I am interested in the K and X band.

Also if anyone knows a good source for electronic components in general? I know who the regulars are but I was hoping to save some money.

A website would be the best but a name would be just fine. Also please respond to email or email + newsgroup so that I don't miss your reply. You must remove NOSPAM from my email address.

Thanks Greg

Robert:

That's ACARS. It is in fact datatransmission between aircraft and ground stations. The main frequency in Europe is 131.725 MHz. If you are interested in details and decoding programs, let me know.

I have a pretty large variac transformer that I'd like to
sell. It's 7"diameter by 4"high, weights about 25lbs, in
excellent condition. It's marked as follows:

General Radio Co type V20H
"Volts shown for 8amp 0-270V 50-60Hz"

I assume that refers to the fixed voltages between
the various taps. It has 7 terminals; 1 terminal for
each end of the winding, 1 variable slider, and 4 fixed
taps for various fixed voltages.

This thing is quite substantial. I don't know what it's worth.
If interested, make me an offer.

Thanks,
Joe
KB2FSH

PS - I also have a couple of smaller ones. If your interested let
me know and take a look at them for the specs.

Hello...
I am buying a couple of 12volt 1200MAH batteries for my
Yaesu FT-530 handheld.Aftermarket..
When I bought my radio I got a battery charger #NC-18B which
will charge at 14.5volt 50MA... I know that this charger is good
for the 12v 600ma batteries that I first had but is it still good for
the newer stronger batteries??????
is the charging time just doubled..???
The charge time for this charger is 15hours for the 12v 600ma..

these batteries are now only available through Yaesu for twice the money
as the newer batteries.....
Please advise..
thanks in advance.
Bob

Anybody have any idea on were to find or have the p/n for the power plugs found on most mobile rigs these days? I'm talking the connector that looks like a 'T'. Both my Kenwood TM-V7A and Yeasu FT-8100 have the same connector. I also know that the Icom 2000H had this connector (used to one one before the above two radios were purchased).

I would rather not buy one from either of the above companies since they get way to much money for them.

Tnx Mark

I've been very happy with http://www.shfmicro.com. Very responsive and knowledgeable "tech support" from Alan! They don't take credit cards or phone orders, though -- you have to order via email or fax, and pay via snail mail or COD.

>
> Also if anyone knows a good source for electronic components in general? I
> know who the regulars are but I was hoping to save some money.

http://www.newark.com has almost everything, but they can be somewhat expensive. Their printed catalog is the size of a major metropolitan telephone book, so the higher prices are somewhat justified IMHO.

http://www.digikey.com has less stuff, but it tends to be cheaper than Newark.

http://www.mouser.com and http://www.circuitspecialists.com can also be good places to look.

Although the device you have mentioned is true it is not necessaryly the one which may be implanted. There is also two other well know devices. One which is implanted in your teeth and doesn't need to be done with a filling. It can be done during a regular cleaning and placed in an area just below your gum. These devices are usually used to monitor your reactions while watching TV to study your behavior but can also be used in the mannor which you described. The other device is a kind of temporary device because it is placed in a food source and swollowed. But it will stay with you normally 2 to 3 days.

Hope this info helps.

Bill, well said (as usual). We've heard about LiTZ and Wilderness Protocol on 2M, I really wouldn't object to codified frequencies on the HF and VHF bands. For HF, the partition between CW and phone modes seems to be a natural place for it. Either mode could be used as desired (depends on how interested you are in being rescued). Additionally, if incentive bandplans are kept, these emergency freqs should be accessible by any amateur that has any HF privelege - for the purpose of emergency communication. No ragchews and no dx nets.

>another discussion thread on the matter?

And why did you feel it was necessary to respond to Bill's post, Drew?
Your month-long absence from this newsgroup just left you STARVED for
attention, didn't it, Drew?
If Bill hadn't started another thread about CBRAMBO, you most assuredly
would have, Drew. Of all the people I've encountered in the radio-related
newsgroups, it is you which has the most overdeveloped sense of
self-importance. A case in point: the recent "CBRAMBO is Back by Popular
Demand" thread. How many people clamored for your return while you were away,
Drew--a half dozen, perhaps?? The overwhelming majority seemed pleased that
you had departed. You just got upset because some Dejanews dork impersonated
you, and took that act as a sign that you had to return to defend your "good
name" (yeah, right).
A few well thought out comments about wall wart power supplies,
Shakespeare Army Big Sticks, and A99's tossed in among your numerous off topic
posts do not make you the humorous guru of radio knowledge that you pass
yourself off as, Drew. However, if you'd lay off of dispensing free legal
advice (which law school did you graduate from, Drew?) and continuing your
inane, childish feud with Mr. Volunteer Sheriff's Deputy of Phoenix, (or Mesa .
. . whatever) Arizona, you might find that you would become as popular as you
think you are.

4009. Re: VX-5R CTCSS problem....

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-17 00:00:00 UTC
From: cc13125@cedarnet.org
Message-ID: <36ca32ee.74427290@news.cfu-cybernet.net>
Source record: 150411

I think its good that I'm not the only one experiencing this (?? Best
to be alone on a sinking ship, or lots of people ??)

Although legally, Yaesu probably has no implied warranty that the PL
decode operation is as quick as other radios they (Yaesu or any other
company) have produced... 3 seconds to decode is not acceptible.
As I said earlier, overall I like the radio. This decode problem
severely limits my use of the radio in high RF areas (IMD allies, etc)
I don't see any easy software fix from Yaesu (speed up the CPU clock,
allocate more CPU cycles to the decode function), so I fear that us
"beta testers" are stuck with broken radios.

Has anyone contacted Yaesu to see what their attitude to
fixing/replacing "their broken radio" is?

I think I now know why the FT-100 is 6 months late in shipping......
;-(

When you drop the Far East GI factor "slopehead" usually
connotes a Neanterthal sort who might not show as being very
bright. Like one who says "This frequency is MINE!". I've
no bias toward anyone in the Orient. Don't go Stevensonian
on us.

I have a Santec ST-144up 2 meter HT and the drop in rapid charger for sale. This is a 5 watt synthesized HT with 10 memories, clock, etc. It has LOUD audio, from a full sized speaker. Radio comes with the desk top

rapid charger.
Will sell the HT and charger for $50 plus shipping.

If that were true, then the only important measure of her accomplishments would be her own, using her own yardstick, not that of others. It shouldn't matter to her if licenses were given away in Cracker Jack boxes. That has nothing to do with the goals she might choose to set for herself in amateur radio. Only if she insists on measuring herself through the eyes of others can *their* yardsticks have any meaning.

For sale or trade Yaesu FT-727r dual band ht with brand new 12v 1100ma battery and W&W Associates master charger.

Radio is in fine working order with the exeption of the vox button is missing and the rubber grips on the volume and sql controls or gone. I have the original owners manual but no box.

Would like to trade for a 220mhz radio also in good condidtion and working order.

Or would like $200 for the radio or b/o.

Thanks N2HYO - Mike

What you have is a type "N" connector. I would suggest you get a copy
of any ARRL antenna book or handbook and it will show you how. The
shield is NOT soldered, only the center pin.

>>
>> http://solar.uleth.ca/solar/www/swarm.html
>>
>> ** End of Warning **

So, major solar flares have occurred on the sun's surface - these flares
emit jets of ionized particles - when they impact our ionosphere, dis-
turbances to radio communications can occur. If severe enough, satellites
can be damaged.

Gary and Group,

TenTec offers a 222MHz kit for $295. Haven't seen too many "stand-alone" rigs.

Azden had one, as I remember, but every piece of Azden gear I ever owned was in the shop before the warranty card cud get back to the factory!

It's a warning for those in the electrical power transmission and
telecommunications industries. Geomagnetic storms can disrupt their
systems. For the rest of us,it's an opportunity to see one of natures
most beautiful phenomenon.

E44DX Team Meets Arafat, Begins CW Operation

GAZA CITY, PALESTINE, Feb 18, 1999--Members of the E44DX team got to meet Palestinian leader Yasser Arafat today. According to Tim Totten, N4GN, Arafat expressed his support for ham radio and sent his regards to the worldwide Amateur Radio community. Totten called the meeting "the absolute highlight for the team," which racked up more than 10,000 contacts during its first two days of operation.

Meeting a (possibly former) terrorist leader, responsible for approving skyjackings and sending 250 Americans into the ground at 500 mph from 30,000 feet is a highlight ? He is a lunatic ass whose perception of REALITY is warped by too much time spent breathing radon in a cellar, and how much money toward his next radio will be provided by charging $2.00 a QSL card.

> a one to one relationship with ASCII. That's no requirement at all.

Let's take a look at the actual regulations. I have omitted the parts
that allow digital signals on only the "digital parts of the band" and
have included only those sections that apply to HF:

ï¿½97.307 Emission standards.

f.The following standards and limitations apply to transmissions on
the frequencies specified in ï¿½97.305(c) of this Part.

3. Only a RTTY or data emission using a specified digital code
listed in ï¿½97.309(a) of this Part may be transmitted. The
symbol rate must not exceed 300 bauds, or for
frequency-shift keying, the frequency shift between mark and
space must not exceed 1 kHz.

ï¿½97.309 RTTY and data emission codes.

a.Where authorized by ï¿½97.305(c) and 97.307(f) of this Part, an
amateur station may transmit a RTTY or data emission using the
following specified digital codes:

1.The 5-unit, start-stop, International Telegraph Alphabet No.
2, code defined in International Telegraph and Telephone
Consultative Committee Recommendation F.1, Division C
(commonly known as Baudot).

2.The 7-unit code, specified in International Radio Consultative Committee Recommendation CCIR 476-2 (1978), 476-3 (1982), 476-4 (1986) or 625 (1986) (commonly known as AMTOR).

3.The 7-unit code defined in American National Standards Institute X3.4-1977 or International Alphabet No. 5 defined in International Telegraph and Telephone Consultative Committee Recommendation T.50 or in International Organization for Standardization, International Standard ISO 646 (1983), and extensions as provided for in CCITT Recommendation T.61 (Malaga-Torremolinos, 1984) (commonly known as ASCII).

4.An amateur station transmitting a RTTY or data emission using a digital code specified in this paragraph may use any technique whose technical characteristics have been documented publicly, such as CLOVER, G-TOR, or PacTOR, for the purpose of facilitating communications.

Section 97.309 (a)(4) is what authorized modes such as PSK31. This section of the rules is not very well worded, but considering (4) in its entirety is it clear enough. First, the digital codes specified int he paragraph (ie, Baudot, RTTY, AMTOR and ASCII) are all digital codes intended to carry plain text and associated control codes for same. (4) might appear to be to limit transmissions to exactly only those codes, with variations in "technical characteristics," *except* for the nature of the examples given. Clover uses a combination of various permitted modulation types, PacTOR uses Huffman encoding of ascii characters, ordered by their frequency of ocurrence in German, if I recall. G-TOR can use straight ASCII, or Huffman encoding based on English, various possible ACK or FEC methods, using ASCII as control codes, etc. I have just cited a few examples of what is documented for each of the modes the FCC used as examples because it gives us a good idea of the scope of "technical characteristics" that the FCC considers acceptable under the language of (4). With those examples, the rule says just what the FCC intends -- that within the scope of sending information based on the 4 "approved" digital codes, the FCC wants to give Amateur Radio as much flexibilty as possible, with the further proviso that the methods be documented publically. The latter point is actually important to hams, too, to prevent various commercial services from sending who knows what in the ham bands.

> >The rules are not really written very well, but the intent is that, on

> >and even that could be subject to intepretation. To meet the letter of
> >the law, ARRL published the technical descriptions. Would a ham posting
> >them on his or her personal web page meet the requirement? Probably.

I made one minor change to the quoted text to not use a choice of words
that Jon pointed out is potentially confusing. (4) does NOT give us
cart blanche on modulation modes, although combinations of modes seem to
be permitted, based on the examples given.

I also have to wonder a bit about my strict interpretation of "plain
text," in looking at the "publically documented" information on CLOVER,
I note, "CLOVER iis a digital communications mode that conveys 8-bit
digital data over narrow-band high-frequency radio. It can also
transfer ASCII text and executable computer files without using the
additional control characters required in other digital modes, which
decrease throughput."

I think some of the speculation about UUENCODING and such would be
subject to FCC interpretation, and I didn't mean to imply that I knew on
which side of the fence the FCC would come down on. I don't think we
should ask. :-)

> I would think so. But we're talking about telegraphic alphabets here, not
> modulations. That's a separate issue. The latter are defined under 97.3,
> and permitted band by band in 97.305/307. There is no slack there as far

> that isn't a permitted modulation on HF under US rules. PSK31 is G1B,
> and that is permitted, so at least the modulation is Ok, even if the telegraphic

> alphabet being used isn't.

I don't know enough about all those modes to know if they are technically permitted by the rules or not, but lets look at one of the examples the FCC gave to decide. Clover uses a combination of phase and amplitude modulation, sometimes simultaneous, ranging up to 16-level phase-shift modulation. Is that fundamentally different in kind from MT63 in any way? I don't know anything about MT63, so cannot offer any speculation. From what you describe, Hell modes are currently legal on at least some frequencies..

I will speculate that the FCC very willingly made the change to the rules to permit modes such as CLOVER, PacTOR, etc, in the spirit of giving hams flexibilty to use these neat digital modes. PSK31 fits nicely into that flexibility and I see no reason that the FCC would not continue to be willing to make rules changes to permit other modes as well, or issue an interpreation that indicates that such operation is covered under the scope of existing rules. Maybe they SHOULD be asked on that one. :-)

DaveC (bogus@supernews.com) wrote:
: I bought some "solder-type" male BNC connectors for RG-8 coax, but they
: seem anything but solder type. The center pin, obviously, can be soldered
: to the center conductor of the cable, but the housing assembly seems to be
: completely mechanical in nature.

: The components for connecting the shield/braid conductor to the connector
: housing numerous:
: Connector housing
: small cone-shaped ring
: small flat washer
: small tubular plastic piece
: threaded collar that fits around coax and screws into connector housing

: I don't see that any of these parts are "solder" parts. What do you solder
: the braid to?

You don't. The braid is clamped on almost all BNC/TNC/N/etc connectors.
The 'solder type' refers to the centre pin (and to the fact that you
don't need a crimp tool for the outer either).

The normal way to assemble is :

Put the nut (threaded collar), gasket (rubber ring) and metal flat washer
(if supplied) over the cable. Remove about 0.5" of outer jacket from the
cable. Put the connical washer, flat side first over the cable. It should
seat on the end of the outer jacket. Fan the braid over the conical
washer, and trim off round the outide.

Remove the inner insulation from the cable a short distance beyond the
end of the braid. Fit the small plastic bush (if supplied). Trim the
centre conductor and solder to the pin. Put the whole lot into the plug
body, screw up the nut and tighten.

-tony

the ham mags usually don't have a "paid staff" as such..

they do pay for articles now (QST was the long term hold out..)

however, 73 probably should have kept the computer articles and turned into BYTE (of course that's dead now as well.. see http://www.jerrypournelle.com for more info on that.)

I'm betting that you're going to be next, Rich. The ARRL has A LOT riding on your bust. Because if you're not punished for your actions, a major ANTI-ham radio campaign will begin with your racist tape as the central argument against young people joining the ranks of ham radio. Several top brass in the ARRL are aware of this promise, and are lobbying to get you punished.

Hello, everyone, I have a mint shape HW101 (from Heathkit) to give to a new home. The unit doesn't have a vfo, but everything else in installed. The unit was put together by Heathkit many years ago, used for about 100 hours, then the vfo was removed(I was helping a friend out with his unit and gave him mine).

The chassis is mint, contains all tubes, parts, etc...anyone like to have this piece of history? Well, you pay shipping and the rest is yours...(free)

Thanks Everyone,

Lee

Basically this is a "solar storm warning", with the possibility of aurora borealis displays in the night sky (usually after midnight) -also known as "northern lights"- as well as possible disruption of radio transmissions, especially shortwave ones. These always seem to occur when I'm clouded in by a storm in the northeast :(

I just couldn't help myself. I did read it and I'm glad I did. And I can say with all honesty, if given the opportunity to do it again, I would. It was that enjoyable.

4068. PatComm PC-9000 opinions?

I've been looking for a mid-power set (between QRP and 100W) that could
run well on 12V. I thought the Ten-Tec Scout was it but was warned that it
really needs 13.8V. I'd like to hear anyone's experience with the
PC-9000 or any other set in this class. Recommendations? Tnx; 73.

Request: If you respond to this posting, please send me a copy. My net access is
intermittent. Many thanks...

POTENTIAL MAJOR GEOMAGNETIC STORM WARNING

ISSUED: 03:30 UTC, 18 FEBRUARY

/\

(See Appended Comments for Synoptic Information)

(To receive these warnings via e-mail, subscribe using the form page at:
http://solar.uleth.ca/solar/www/sublists.html)

HIGH RISK PERIOD: 18 FEB (UTC days)
MODERATE RISK PERIOD: 18 - 19 FEB

POTENTIAL LOW-MIDDLE LATITUDE STORM INTENSITY: MINOR - MAJOR
POTENTIAL HIGH LATITUDE STORM INTENSITY: MAJOR

POTENTIAL DURATION OF GEOMAGNETIC STORM: APPROX 24 TO 36 HOURS
DURATION OF MAIN BELT OF ACTIVITY: APPROX 18 TO 24 HOURS

POTENTIAL PEAK LOW-MIDDLE LATITUDE K-INDEX VALUES: 5 - 7
POTENTIAL PEAK HIGH LATITUDE K-INDEX VALUES: 6 - 8

EXPECTED DOMINATING LOW-MIDDLE LATITUDE K-INDEX: 5 - 6
EXPECTED DOMINATING HIGH LATITUDE K-INDEX: 6

POTENTIAL FOR LOW LATITUDE HF DEGRADATION: MODERATE
POTENTIAL SEVERITY OF HF DEGRADATION: MINOR
EXPECTED HF PROPAGATION CONDITIONS: GOOD TO FAIR

POTENTIAL FOR MIDDLE LATITUDE HF DEGRADATION: HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: MAJOR
EXPECTED HF PROPAGATION CONDITIONS: FAIR TO OCCASIONALLY VERY
POOR

POTENTIAL FOR HIGH LATITUDE HF DEGRADATION: HIGH
POTENTIAL SEVERITY OF HF DEGRADATION: MAJOR TO SEVERE
EXPECTED HF PROPAGATION CONDITIONS: VERY POOR TO USELESS

POTENTIAL RISK FOR GEOSYNCHRONOUS MAGNETOPAUSE CROSSINGS: 50%
PROBABLE

SUSPECTED SOURCE OF OBSERVED/EXPECTED ACTIVITY:
Coronal mass ejection associated with the M-class flare of 16 Feb.

```
-------------------------------- --------------------------------
EST. POTENTIAL GEOMAGNETIC IMPACT EST. POTENTIAL IONOSPHERIC IMPACT
-------------------------------- --------------------------------
SEVERE STORM : 15 % LOW LATITUDES : MINOR
MAJOR STORM : 40 % MIDDLE LATITUDES : STRONG MINOR
MINOR STORM : 40 % HIGH LATITUDES : STRONG MINOR-MAJOR
ACTIVE OR LESS : 05 % POLAR LATITUDES : STRONG MINOR-MAJOR
-------------------------------- --------------------------------
PROBABLE SI ASSOCIATION : OBSRVD ESTIMATED GLOBAL IMPACT: MAJOR

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 40 - 60
---- ---------------

COMMENTS:

We are observing strong interplanetary magnetic fields with highly
favorable orientations for producing initially major to severe geomagnetic
storming, followed later this UTC day by a reduction to unsettled to minor
storm levels.

There is also a chance we may see some geosynchronous satellites cross
the magnetopause boundary over the next 6 to 12 hours.

SERIOUS OBSERVER SOFTWARE:
Observe solar flares and interplanetary disturbance impacts in
real-time with your home computer.

http://solar.uleth.ca/solar/www/swarm.html

** End of Warning **
```

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

ISSUED: 03:25 UTC, 18 FEBRUARY

/\

(To receive these warnings automatically via e-mail, subscribe using
the form page at: http://solar.uleth.ca/solar/www/sublists.html)

VALID BEGINNING AT: EFFECTIVE IMMEDIATELY
VALID UNTIL: 19:00 UTC ON 20 FEBRUARY

HIGH RISK PERIOD: 18 FEB (UTC days)
MODERATE RISK PERIOD: 18 - 19 FEB

PREDICTED ACTIVITY INDICES: 40, 20, 12, 10 (18 FEB - 21 FEB)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE TO HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 18 TO 24 HOURS
MINOR BELT = 24 TO 36 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

OREGON TO SOUTHERN IDAHO OR POSSIBLY NORTHERN UTAH TO WYOMING TO
NEBRASKA TO IOWA TO ILLINOIS TO INDIANA TO OHIO TO PENNSYLVANIA TO
DARK SKY SITES OF NEW YORK STATE AND POSSIBLY PARTS OF DELAWARE,
KENTUCKY AND THE VIRGINIA'S.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

UNITED KINGDOM AND POSSIBLY EXTREME NORTHERN PARTS OF FRANCE TO
BELGIUM TO NORTHERN GERMANY TO NORTHERN POLAND TO NORTHERN RUSSIA
INCLUDING ALL OF NORWAY, SWEDEN AND FINLAND. OBSERVATIONS FROM THESE
MORE SOUTHERLY LOCATIONS WILL REQUIRE CONDITIONS TO REMAIN ABNORMALLY
STRONG FOR AN ABNORMAL LENGTH OF TIME. ALTHOUGH THIS IS POSSIBLE,
CONDITIONS ARE NOT EXPECTED TO REMAIN STRONGLY FAVORABLE FOR AURORAL
STORMING UNTIL EUROPE IS IN DARKNESS AGAIN. NEVERTHELESS, IT WILL BE
POSSIBLE. NEW ZEALAND AND SOUTHERN AUSTRALIA SHOULD BE FAIRLY WELL
POSITIONED FOR OBSERVING ACTIVITY.

NOTE: Serious observers interested in real-time conditions are encouraged
to investigate the SWARM software at:

http://solar.uleth.ca/solar/www/swarm.html

SYNOPSIS...

A strong interplanetary disturbance has impacted the Earth at 02:50 UTC
on 18 February. This disturbance is pulling strong magnetic fields that are
capable of producing strong to intense auroral activity. We are beginning to
see strong substorming over the higher latitudes as well as attendant
equatorward expansion of the auroral ovals. It appears this may end up being
a fairly good opportunity for observing auroral activity over North America.

This warning will remain active until 19:00 UTC on 19 February. It will
then be updated, downgraded, or allowed to quietly expire.

PLEASE REPORT OBSERVATIONS OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

CURRENT SPACECRAFT OBSERVATIONS OF AURORAL ACTIVITY CAN BE FOUND AT:
http://solar.uleth.ca/solar/www/aurora.html

** End of Warning **

Hi Dave,

Yes, Cecil's right. He was pointing out the importance of being able to copy SOS in Morse code, while at the same time arguing the unimportance of being able to copy any of the other characters - like Q, R, L, and ? for example. His support for this contention was to observe how impractical it is to switch modes when using a computer terminal. Perviously, I had been given to believe that using the computer was a perfectly reasonable way of copying code in lieu of manual decoding ability.

That not a very popular band? I've come accross very few radios capable of 'supporting' it while websearching (the nearest radio store's quite aways from here, so I'm trying to educate myself before the trip)... I was really wanting a 2m/222/442 mobile radio (my local club has repeaters on those 3 bands), and.... Nada...

Anyway.. I'm not putting 2-3 more radios in my car, no matter how useful they may be.. :)

I doubt that anybody would ever run PACTOR and CW software simultaneously,
for instance. I don't even listen to PACTOR. My mailbox functions without
any audible sound except relays clicking.

So you wouldn't be able to copy the Morse SOS with your computer, and you
don't listen to your radio. Ookay. Was there a point related to the
topic of discussion that you were trying to make?

Need weekly skeds on 10m SSB or CW with USA
operators in late July and early August 1999.
Preferably with stations who have a 5 element beam or more
and/or low noise level on receive...
We will be operating QRP (7W, 3el quad, solar power) in
the remote mountains of Peru on a major caving expedition.
Occasional messages to families and possible medical or safety traffic.

Since noise figure and sensitivity are key elements of a radiotelescope
system, it would seem unlikely that this radio would be very useful.
This is only speculation -

Jim, the original question was what to do about hams who don't know
Morse code but *hear* a CW SOS. I suggested that every ham needs to
be able to recognize an SOS even if he doesn't know Morse code so
he would know to tune his CW decoding software to it.

For instance, two no-coders are engaged in a SSB QSO and
10101011101110111010101000 is heard. Instead of complaining about
CW guys on their SSB frequencies, if they recognized the SOS, they
could switch on their CW decoding software and, with any luck,
resolve the emergency.

CW is one of the more popular modes. That's why some of us need
Morse code. You may not need it - the ARS may not need it - but
a lot of us need it for CW/OOK. Hundreds of thousands of hams
care about Morse code.

The 222 MHz band isn't available in Japan or Europe. So there is much
less demand for such a rig. The manufacturers have offered a few USA
only radios with it, but the sales volume is generally too low to make it
profitable. This lack of equipment has in turn tended to reduce activity
on the band. Too bad, it is a good band.

>splitting here, though!

Ah, but uuencoding *is* ASCII. Only printable ISO ASCII characters are
transmitted. That's defined in the uuencoding specification. ISO ASCII
is one of the three specifically allowed telegraphic alphabets. The rules
seem to be mute on what those letters must *spell*, however, as long as
it isn't encryption intended to obscure meaning.

Specifying message content would get into areas of free speech which the
FCC is generally loathe to enter. We can say what we want (subject to obscenity
limitations), and we can say it in any language that we want (except when IDing).
If the language is machine language, that's no different than if it were German,
French, or some other language. It isn't encrypted, since any other machine
which speaks that machine language can understand it without knowing some
secret key.

You might try to make a case that this is third party traffic, with the machines
being the third parties. I'd love to see that argument made. It would require
granting machines the status of persons.

That seems to directly contradict the wording of the regulation. But if
it is true, then it literally throws the door wide open for the use of *any*
telegraphic alphabet, since any such alphabet can be mapped to have
a one to one relationship with ASCII. That's no requirement at all.

>The rules are not really written very well, but the intent is that, on
>HF, the FCC intends that amateurs transmit plain text. That is why we
>have the limitation on permitted codes that are plain-text in nature and
>the requirement for a publically document one-to-one relationship
>between other codes and a permitted code. On VHF and higher, amateurs
>can use essentially any digital code, under some circumstances.

There is nothing inherently "plain text" about any alphabet. It is what is
spelled using that alphabet which may be considered plain text. Yet
the FCC is mute on the subject of message content (aside from some
limits on obscenity and requiring IDs to be in English). Under your
interpretation, as long as we use a telegraphic alphabet which could,
even in principle, be mapped to have a one to one relationship with one
of the three specifically named telegraphic alphabets (and that's no
limitation at all), we can spell anything we like with it.

>This begs a few questions. First, should amateur radio be limited to
>plain text on HF? IMHO, we should not. Some hams have been doing
>"digital" transmissions on HF and I do not see that the FCC has really
>cared. What about UUENCODING and other methods of transmitting digital
>information using plain-text codes? I quite honestly don't know how the
>FCC would react to those, but I could see it go either way.

I replied to Jon about this, but let me reiterate that machine language is
as valid a language as Esperanto (also an artificial language). The machines
which "speak" it, consider it their *native* language just as Germans consider
their language their native language. We can use German on the air, so we

should also be able to use Intel Hex using the same reasoning.

>But other than the "plain text" requirement, yes; virtually anything
>goes, as long as the modulation method has been publically documented,
>and even that could be subject to intepretation. To meet the letter of
>the law, ARRL published the technical descriptions. Would a ham posting
>them on his or her personal web page meet the requirement? Probably.

I would think so. But we're talking about telegraphic alphabets here, not
modulations. That's a separate issue. The latter are defined under 97.3,
and permitted band by band in 97.305/307. There is no slack there as far
as I can see. So we can't use things like Hell modes on the data segments
of the bands (where the rest of the world uses them). They are fax modulations
(dot matrix text) which is F3C, and that must only be used on the phone/image
segments. MT63 doesn't seem to be allowed at all, since it is G7B, and
that isn't a permitted modulation on HF under US rules. PSK31 is G1B,
and that is permitted, so at least the modulation is Ok, even if the telegraphic
alphabet being used isn't.

4098. How to install RG-8 solder-type BNC connectors?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-18 00:00:00 UTC
From: bogus@supernews.com
Message-ID: <bogus-1802990954380001@dnai-207-181-237-96.dialup.dnai.com>
Source record: 150317
Cross-posted to: sci.electronics.repair,rec.radio.amateur.misc

I bought some "solder-type" male BNC connectors for RG-8 coax, but they seem anything but solder type. The center pin, obviously, can be soldered to the center conductor of the cable, but the housing assembly seems to be completely mechanical in nature.

The components for connecting the shield/braid conductor to the connector housing numerous:
Connector housing
small cone-shaped ring
small flat washer
small tubular plastic piece
threaded collar that fits around coax and screws into connector housing

I don't see that any of these parts are "solder" parts. What do you solder the braid to?

Any help would be greatly appreciated. No instructions were provided.

Sorry for the modified return address, but I hate getting spammed.
My correct return address is provided below if you choose to e-mail me.

Thanks,
Dave

Hello to the group,
I have a like new (3 mos old) 8 port 100 base-T hub. It is 19" rack mountable. These type of hubs are rare and very sought after. This guy is in mint shape!

I also have a 48 port patchbay for use on an Ethernet network. 19" rack mountable great shape! I place the value for the Hub at $175.00 and the patchbay at $100.00. If this sounds like something you might be interested in send me your trade offer (Ham Gear, 2, 6, & 10 meter gear, amps, meters, antennas etc. WHATEVER!) and I will get right back with you. I'm really looking for a 3 to 5 element 6 meter beam or some long pieces of low loss RG-8 coax or a 6 meter all-mode amp. You pay your shipping and I pay mine. (FedEx)

4105. Help me catch a thief

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-19 00:00:00 UTC
From: bogus@supernews.com
Message-ID: <bogus-1902990824430001@dnai-207-181-237-109.dialup.dnai.com>
Source record: 150124
Cross-posted to: sci.electronics.repair,sci.electronics.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc

VCRs have disappeared repeatedly from the local volunteer center where I donate some of my time.

Others at the center suggested securing the equipment to tables, locking doors, etc, but since the general public doesn't have access to this part of the building, some of us feel that it is someone (or someone's child) who attends regularly. I want to get this (ahem...) individual on video "en flagrante" (in the act).

A camcorder (with auxiliary video input capability) will be used for the recorder, with a pinhole camera (NTSC output) placed either inconspicuously high in a corner of the room, or behind a panel in the TV/VCR stand/cabinet, providing the surveillance. (Placement of the camera will be determined by available light (we don't want to get just the silhouette of the thief walking away with yet another VCR) and probable entry/exit path into/out of the room.)

An alarm wouldn't be very helpful here, because there is seldom someone nearby when the thefts occur and by the time someone appeared on the scene, the thief would probably be gone (with or without the merchandise).

I need help with some of the planning:
1) How can I create a circuit that senses that the VCR has been picked up or unplugged: If I place the camera and recorder in the TV/VCR stand, triggering of the record mode can be via wire. If it's placed elsewhere in the room, triggering would be have to be done via RF or other link. Any sensing circuit must be unobtrusive; the thief will be unplugging the power cord from a standard extension cord into which the TV is also plugged, and so there can't be any suspicious circuitry between the VCR plug and the extension cord...

2) Triggering the record function on an old Sony CCD-V9, 8mm camcorder: how can the camcorder be put in record mode automatically?

Any suggestions would be greatly appreciated.

Sorry for the modified return address, but I hate getting spammed.
My correct return address is provided below if you choose to e-mail me.

Thanks,
Dave

Hey, COOL! Electronic Boogers! Just pick them out and eat them. If
they're crunchy, you got the right ones. If they're not crunchy, keep
trying.

4110. Re: Help me catch a thief

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-19 00:00:00 UTC
From: "Jerry G." <jerryg50@hotmail.com>
Message-ID: <cfhz2.292$uu3.12792@news.total.net>
Source record: 150129
Cross-posted to: sci.electronics.repair,sci.electronics.misc,rec.radio.amateur.homebrew,rec.radio.amateur.misc

What you can do is install a loud sono alert inside the machine.
These are easily available. You wire an AC relay that can work
accross the mains comming inside the machine. The relay contacts are
in series with a 9 volt battery to drive the sono alert. When the
machine is unplugged the relay snaps shut closing the n/c contacts,
and the alert screams away. Put a cheap keyswitch on the side to
allow you to move the machine. You can mount the sono alert on the
inside with some 2 way tape. You will have to drill a 1/8 inch hole
where the alert outlit is so that the alert can scream through the
metal cabinet.

For the moving switch, do not use a hidden switch or something like
that. The kids will learn that very very fast!!!

Remember to open and change the battery about once a year. And test
it periodocaly to see if the battery is good. The total cost is
about $40 in parts.

Don't forget that during powerfailures you will have the machines
screaming away. Just walk over and turn off the switches
temporarly... If it screams for a few hours you will have to change
the batteries...

I had a few contracts of this nature for some institutions. We had to
do about 100 VCR's and TV's for several places.

DaveC wrote in message ...
|VCRs have disappeared repeatedly from the local volunteer center
where I
|donate some of my time.
|
|Others at the center suggested securing the equipment to tables,
locking
|doors, etc, but since the general public doesn't have access to this
part
|of the building, some of us feel that it is someone (or someone's
child)
|who attends regularly. I want to get this (ahem...) individual on
video
|"en flagrante" (in the act).
|
|A camcorder (with auxiliary video input capability) will be used for
the
|recorder, with a pinhole camera (NTSC output) placed either
|inconspicuously high in a corner of the room, or behind a panel in
the
|TV/VCR stand/cabinet, providing the surveillance. (Placement of the
camera
|will be determined by available light (we don't want to get just the
|silhouette of the thief walking away with yet another VCR) and
probable
|entry/exit path into/out of the room.)
|
|An alarm wouldn't be very helpful here, because there is seldom
someone
|nearby when the thefts occur and by the time someone appeared on the
|scene, the thief would probably be gone (with or without the
merchandise).
|
|
|I need help with some of the planning:
|1) How can I create a circuit that senses that the VCR has been
picked up
|or unplugged: If I place the camera and recorder in the TV/VCR stand,
|triggering of the record mode can be via wire. If it's placed
elsewhere in
|the room, triggering would be have to be done via RF or other link.
Any
|sensing circuit must be unobtrusive; the thief will be unplugging the
|power cord from a standard extension cord into which the TV is also
|plugged, and so there can't be any suspicious circuitry between the
VCR
|plug and the extension cord...
|
|2) Triggering the record function on an old Sony CCD-V9, 8mm
camcorder:
|how can the camcorder be put in record mode automatically?

|
|Any suggestions would be greatly appreciated.
|
|Sorry for the modified return address, but I hate getting spammed.
|My correct return address is provided below if you choose to e-mail
me.
|
|Thanks,

****

And you never will get a satisfactory answer as there are dozens of
stories/guesses as to where the term came from.

Some claim to be a higher probability by having been published in certain
books, but my take on it is that there is no answer that is for sure.

Myo wn pure guess is that Hiram was the first name of the father of ham radio
and the quick speak and shortened form of his name when heard would be Ham.
This is my own guess and I have never heard any one else give this version.

All the organs of the body were having a meeting,

trying to decide who was in charge.

"I should be in charge", said the brain, "because I run all the

body's systems, so without me nothing would happen".

"I should be in charge", said the blood, "because

I circulate oxygen all over, so without me you'd all waste

away".

"I should be in charge", said the stomach, "because I process

food and give all of you energy".

"I should be in charge", said the rectum, "because

I'm responsible for waste removal".

All the other body parts laughed at the rectum and

insulted him so, in a huff, he shut down tight. Within a few days,

the brain had a terrible headache, the stomach

was bloated, and the blood was toxic.

Eventually the other organs gave in.

They all agreed that the rectum should be the boss.

The moral of the story? You don't have to be smart or important

to be in charge ... just an asshole.

As I said in the original post, I don't want to go the alarm route. We can scare off the individual, but, as I said, we want to catch him/her on video.

Any suggestions as to how to do this will be greatly appreciated.

There is a sensor called "Videotector motion detector"
Here's what it say about it

"Attach the sensor on the video monitor. Any
movement in the picture triggers audible alarm
and contact closure. Use the contact closure to
start a VCR or trigger an external security system.
Adjustable sensitivity and alarm volume."

I think this could work, get a picture of
the VCR on the monitor, place the
sensor over that spot.
As soon as some one walks up to the
vcr, you are recording it.

Minus side - expensive - $100
from Home Automation Systems
800-762-7846

disclaimer - I don't work for them, just buy stuff from them.
Some people can get so flame happy.

>interfere with that.

There is no need for distinct spectrum allocations if frequency
co-ordination is done wisely and good engineering practices
are employed. Below, you mention GMRS and FRS, services
which I am sure you would agree are used by the least
technically inclined persons, but by golly, they are sprinkled
through a public safety band with police, fire, and other more
important users, yet no problems exist. Why wouldn't the same
be true for microbroadcasters filling in the existing holes within
the broadcast spectrum using type accepted equipment?

>CB, Ham, GMRS and FRS are a few of the non-revenue
>forms of radio that are available to the public. Since these are all
>reserved for two-way communications, perhaps there should be a segment
>of the spectrum set aside for microradio broadcasting.

Huh? This doesn't parse; microradio broadcasting is not a form
of two-way communications. Just what are you trying to say?

>If microradio is such a community asset, then people wouldn't mind
>listening to it on their SW radios or using converters to place their FM
>stereo systems on some new microradio VHF/UHF band.

That is the same arrogant dribble that we hear from the broadcasters:
that there is enough room on the internet for a zillion stations, blah,
blah, blah. The airwaves (should) belong to the public, and that
public (with proper constraints) should be able to make proper use
of the unused portions of spectrum in the established FM (and AM)
broadcast bands as Mr. Kennard has stated. Most radio listening
is done from the car where few people have shortwave radios or
receiving "converters."

Actually, Wayne and Virginia split up earlier. He wrote about it in one of his editorials in '68, as an explanation of why some things had fallen by the wayside.

They were divorced years before Byte came around. He remarried (I can't remember his second wife's name at the moment). When Byte was started, his first wife mysteriously showed up on the masthead. More recently, I've heard it said that he'd been advised it would be best to put the new magazine under someone else's name, because he was having legal problems at the time (I can't remember if the reason given was the IRS or the phone company (because of the series about telephones that he ran in 73). I'm not sure why his ex-wife filled the role, because I'd had the impression thta the breakup had not gone smoothly.

Anyway,the first issue of Byte came out in September 1975. Two or three issues later (I don't feel like checking) Wayne was out of the picture. I thought it had simply just been pulled out from underneath him. From that point on, there was no mention of Wayne Green in Byte. Even when it ran an article about teletype, and listed ham magazines as a source of information, 73 was missing.

It was around 1980 that Byte was sold to McGraw Hill.

I've said it before, but I always thought it interesting that Carl Helmers, the original editor of Byte, mentioned that Robert Heinlein's Door Into Summer was one of his favourite books. It's interesting because the hero of the book has a company stolen out from under him, from people he trusted.

I've always wondered if the idea came from that book.

FCC SAYS DELAWARE HAM MUST RETEST OR LOSE TICKET

The FCC has notified a Delaware ham that she must take her Amateur Radio
examinations again or lose her license. The FCC's Riley Hollingsworth,
K4ZDH, says "questions were raised" about how Sheila Bowden, N3QQS, of
Millsboro, upgraded to Extra, and said the FCC is requesting that Bowden
start from scratch and retake "all the elements." Bowden was notified
February 16 in a letter from Hollingsworth.
```

The FCC has the authority under Part 97 to re-administer exam elements previously administered by VEs. The FCC may administer the exam itself or designate a VEC or VE to administer the retesting session--typically employing a VEC that's different from the initial testing session.

The FCC told Bowden that she must retake the Amateur Extra Class examination series at an ARRL/VEC session before March 19 or lose her license. "You will be granted an Amateur Radio license consistent with any elements that you pass upon re-examination," Hollingsworth's letter said.

Hollingsworth said the FCC plans to call in "25 to 50 more" amateur licensees for retesting in the near future. Those individuals have not yet been notified, however. In all of those cases, Hollingsworth said, the FCC has reason to suspect the integrity of the examination process.

"The ham community needs to have a sense of confidence in the examination system," Hollingsworth said, adding that enforcement must not focus solely on operating violations. "This is a critical link in the chain."

Last month, the FCC dismissed the Extra class license formerly held by Bowden's husband, Wayne, after the Commission discovered "irregularities in the administration of the examination by the Volunteer Examiners." Wayne Bowden, formerly AA3RT, took the complete Amateur Radio examination series at an October 4 W5YI-VEC session. He had not held an amateur license before then.

The FCC is continuing its probe into alleged testing irregularities at Pennsylvania W5YI-VEC sessions October 4 and 6, including allegations that examinees might have been coached or given test answers.

FCC SUSPENDS JERSEY HAM'S HF PRIVILEGES

The FCC has suspended for six months the HF privileges of a New Jersey ham. The FCC notified Walter P. Miller Jr., W2YEE, of Edison, New Jersey, that his privileges to operate below 30 MHz were being suspended for 180 days.

The license-modification letter February 16 from the FCC's Riley Hollingsworth, K4ZDH, came in the wake of an earlier warning letter to W2YEE. Hollingsworth alleged that W2YEE's 75-meter operation on the evening of February 4 was contrary to the Amateur Service Rules. Hollingsworth said Miller violated Section 97.1, basis and purpose of Amateur Radio; Section 97.101(a), good engineering and good amateur practice; and Section 97.119, identification requirements. The alleged operation took place on 3901 and 3950 kHz, the FCC said.

"Specifically, you were apparently broadcasting and talking to no particular station for several hours, during which time you prevented the use of the frequencies by others and maliciously interfered with other stations attempting to use the frequencies," Hollingsworth wrote. He said the Commission also had information indicating similar behavior occurred the next evening on 75.

"Such operation endangers the basis and purpose of Amateur Radio as a service, degrades it for other licensed operators and cannot be tolerated,"

Hollingsworth wrote.

Section 97.1 Basis and purpose, of the rules discusses the public service value of Amateur Radio, as well as its contribution to advancing the state of the art; expanding the reservoir of trained operators, technicians and technical experts; and enhancing international goodwill. Hollingsworth is on record linking certain types of on-air behavior with a negative perception of Amateur Radio in other countries.

A warning letter had gone out to Miller January 8 regarding similar operation. The FCC informed Miller at that time that he faced license revocation and fines.

Hollingsworth told Miller that the FCC was modifying his Amateur Radio license to prohibit HF operation for 180 days from February 16, the date of the modification notice. Miller has 30 days to formally protest the modification. If he does not protest it, the modification order expires August 16.

DXers CLAMOR FOR E44DX

The DX community wasted no time in mounting a full-blown DXpedition to the newly minted DXCC entity of Palestine. The E44DX operation commenced February 16 at approximately 1200 UTC, shortly after the call sign was released to the Palestine Wireless Society by the Palestinian National Authority's Ministry of Posts and Telecommunications (MPT). During its first 48 hours, E44DX racked up more than 10,000 contacts. The team also got to meet Palestinian leader Yasser Arafat, who expressed his support for ham radio and sent his regards to the worldwide amateur community.

After the DXpedition ends, the E44DX call sign will be assigned to the newly formed Palestinian Amateur Wireless Society. Arrangements are being made to leave equipment behind for the new club station, assuring continued Amateur Radio activity from E4.

Led by Martti Laine, OH2BH, the international team includes QST DX Editor Bernie McClenny, W3UR, as well as Pekka Kolehmainen, OH1RY, and Pekka Holstila, OH2TA. They are working in cooperation with Ali Yashruti, E44A (formerly ZC6A) and Sami, E44B (formerly ZC6B), using two stations from the Palestine Hotel equipped with Yaesu FT-1000MPs and FET amplifiers. Antennas are dipoles and verticals.

Initial operation was on SSB only, concentrating on 3795, 14,195, and 21,295 kHz, but the team took to 40-meter CW early on February 18 and planned to concentrate on 40 CW for the next night as well. The team has been using 7005 or 7010 and listening up--sometimes way up. Some stations reported success only after several hours of calling. E44DX was to be active all day February 19 on 15-meter CW as well. The DXpedition also got on 40 SSB (7061 kHz) early on February 18, working many US stations.

Before concluding the DXpedition February 23, the team will provide additional bands when the current activity begins to thin. Frequencies will be announced later. Totten said the team decided to not participate in this

weekend's ARRL International DX CW Contest. During openings to North America, E44DX will focus on SSB, particularly 20 and 15, as well as CW on 30, 17, and 12 meters. Right now, E44DX has been running on reduced power (400 W or less) for the most part, Totten says, due to an interference problem with the hotel telephones.

Totten is setting up a "simple" E44DX "DXpedition to Gaza City, Palestine" Web site at http://www.n4gn.com/e44dx/.

Almost a week before E44DX was even authorized, some stations reported working a station identifying as "E4DX" on 40-meter CW. That station appears to have been a pirate.

Palestine formally will be added to the ARRL DXCC List effective October 1, 1999, but contacts made with E4 stations after February 1, will count toward DXCC. QSLs for E44DX go to OH2BN.--thanks to Tim Totten, N4GN

ARKANSAS HAMS TAKE STOCK OF TORNADO RESPONSE

Members of the North Central Arkansas Amateur Radio Service recently took stock of Amateur Radio's performance when tornadoes struck January 21. For the most part, the club was pleased with its response. "For the first 24 hours," we were it," Arkansas Section Manager Roger Gray, N5QS, said of Amateur Radio's communication system. Gray, who lives in the stricken area, proposed constructing a permanent emergency net control site in the center of White County. At present, various net control stations operate out of their homes. But in the recent weather disaster, some net control stations were forced to evacuate and leave the air.

After the tornadoes--upwards of three dozen in all--hit the White County area, hams who had been serving as weather spotters moved into the disaster recovery phase. Eight people died in Arkansas, and many others were injured. Damage in the stricken area was widespread. Ham stations were established at two Red Cross shelters and at the police station in the badly damaged town of Beebe. Salvation Army teams from Little Rock and Jonesboro integrated ham gear into their feeding stations in Beebe and McRae. "Over the course of the net, the stations handled untold numbers of Red Cross messages and probably 50 to 100 health-and-welfare messages," Gray said.

Gray himself got climbing duty when a group of amateurs made repairs January 24 to the Beebe Ambulance base station antenna, located atop a water tower. Hams also worked with cleanup crews. Formal nets ended on January 27.

"The hams of this area have been great and bounced right back," Gray said. Hams even managed to participate in the School Club Roundup February 8-13 from the McRae High School gymnasium. "Almost every student we talked to remembered one of their teachers [Larry Sicks, AC5AV, a math teacher at the school] sitting in the lobby all day talking on the radio, and it gave them another perspective of our hobby."

Among Gray's "lessons learned" was a suggestion to get local or state governments to issue standardize IDs to those needing access to affected areas, such as ARES/RACES members. He also advises hams to carry a copy of

their Amateur Radio license when on emergency or disaster duty.

A newspaper story on ham radio's role in the storm and the club's evaluation appeared February 10 in the Searcy Daily Citizen.

SALVATION ARMY CONTINUES COLOMBIA EARTHQUAKE RECOVERY

Three Salvation Army disaster relief teams are helping residents of Armenia and Pereira, Colombia, to recover from the massive earthquake that shook the area last month. According to the Salvation Army Team Emergency Radio Network (SATERN) immediate aid, including meals, vaccinations and clothing, has been provided through a Salvation Army base camp. Salvation Army personnel are networking with other agencies in the region. At the latest count, almost 17,000 people have received assistance from The Salvation Army. A SATERN net on 14.265 MHz has been helping with inquiries about victims.

Casualty figures indicate that the number of dead has risen to 950, and the number of injured has increased to nearly 4,000. Up to 95% of homes were damaged in the city of Armenia, 80% in the municipalities of Barcelona, Calarc and la Tebaida, and 50% in the center of the city of Pereira. The nearest Salvation Army facility is in the town of Ibague, which has suffered less damage.

According to UN and US reports, the security situation is now under control and the rescue phase has officially ended. An estimated 65% of Armenia's population now has normal access to water supply, and 80 percent have electricity. The Salvation Army and several other relief groups have been assigned to assist in census work to discover the most pressing needs.

Food distribution will continue. Reconstruction, sanitation, health and water needs persist and will particularly affect the most vulnerable. There is a great need for psycho-social recovery, especially for children.--Mike Gelski, KB0PVD/SATERN

HAMS FILL TEXAS COMMUNICATION GAP

Red Cross and local emergency officials in East Texas benefited from ham radio in late January during flooding along the Sabine River. The flood gates at the Toledo Bend Reservoir had to be opened under emergency conditions January 29 after heavy rains the previous week north of the lake. The next day, the area downstream of the Toledo Bend Dam--slightly east of the town of Burkeville, Texas, was declared a disaster location. The Red Cross headquarters in Orange, Texas, was notified that many families living below the dam were forced to evacuate due to rising water in the Sabine River.

When the Red Cross mobile units arrived on scene January 31, however, they found that their cell phones and VHF radios would not function, causing a major disruption in the provision of food, blankets, and other disaster aid.

Red Cross Manager Tom Martin contacted ARES DEC J. R. Aaron, K5SUB, for help in setting up emergency communication from the affected flood area to the

Orange Red Cross headquarters. Aaron then contacted Gene Vanscoy, KA5VMF, Dick Porter, KK5GV, Bill Lexa, WA5LFS, and Paul Clark, W5UHG in the Orange area to assist in relaying information via HF from the affected area to the Red Cross HQ in Orange.

In turn, K5SUB contacted Newton County EC Garland Meredith, K5VY, to activate the Newton County mobile EOC, KD5GBG. The mobile unit arrived at the Red Cross location below the Toledo Bend Dam power generating facility around noon. W5UHG, KA5VMF and KK5GV established HF and VHF links. WA5LFS, manned the HF equipment at the Orange Red Cross headquarters. In all, hams handled 28 formal and 41 informal messages.

Nearly 150 people were evacuated. Authorities reported no serious injures, no fatalities and no one reported missing in the Burkeville area. The relief effort wrapped up February 1.--Garland Meredith, K5VY

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity took a great leap forward this week. The solar flux on February 14 was 204.6, which is the highest it has been since April 19, 1992, when it was 205.7 The Valentine's Day sunspot number of 211 was the highest since July 12, 1992, when it was 215. Both of these earlier readings were from the down side of the previous solar cycle. Average solar flux for the week was up nearly 72 points compared to last week, and average sunspot numbers increased by almost 120. As a result of higher solar activity, conditions on the higher end of the HF spectrum were much improved.

A major geomagnetic storm at 0250 UTC on February 18, put an end to the "sunny" outlook. The resulting planetary A index for the day was 54. The high-latitude A index was 89, and the associated K indices went as high as 8, which is extremely disturbed. The should result in auroral displays. The predicted A index is 30 for February 19, 15 for February 20, and 10 for February 21. This does not bode well for the ARRL International CW DX Contest this weekend, although by Sunday conditions probably will have recovered.

A look at recent solar images shows quite a few pox on ol' Sol. Check out some recent solar images at http://www.sec.noaa.gov/solar_images/ImageIndex.cgi. Click on any small image to make it larger. For a more dramatic presentation, see the animated solar rotation at http://spaceweather.com/java/solar-anim.html.

For Friday through Sunday, look for solar flux values of 160, 155, and 150. Expect the solar flux to continue down to around 135 on Monday, 125 on Tuesday, then below 120 around February 27, 110 around March 1 and 2, and bottoming out for the short term at 105 from March 3-5. Based on the current 27.5 day solar rotation, solar flux should rise again, going above 150 after March 9, 170 after March 11, and hit below 200 before mid-month. Unsettled to active geomagnetic conditions are forecast for March 10-12.

Sunspot numbers for February 11 through 17 were 84, 165, 199, 211, 167, 176, and 135, with a mean of 162.4. The 10.7-cm flux was 163.5, 188.4, 198.4,

204.6, 190.1, 191.8, and 189.8, with a mean of 189.5. The estimated planetary A indices were 16, 21, 7, 9, 13, 4, and 16, with a mean of 12.3.

IN BRIEF:

* This weekend on the radio: The ARRL International DX Contest (CW) is this weekend (see QST, Dec 1998, p 97 for complete details). Also, listen up for the Guides on the Air (GOTA) event (see below). Just ahead: the CQ WW 160-Meter SSB Contest, the REF French Contest (SSB), the UBA Contest (CW), the YL International QSO Party (SSB), the RSGB 7-MHz Contest, the CQC Winter QRP QSO Party, and the North Carolina QSO Party are the weekend of February 26-28 (see QST, Feb 1999, p 92 for more information).

* Guides on the Air event: You can help young women to learn about Amateur Radio by participating in the Guides on the Air (GOTA) event, February 20-21. Although this event originated in Canada, it is spreading to the US. Invite a few Girl Scouts, or the whole troop to your shack that weekend. GOTA stations will be using all HF bands plus 2 meters, on frequencies that end in "33" and "88." US Girl Scouts who participate may earn the Ham Radio patch. For information on obtaining these patches, contact Arline Berry, W1LIO, 6 Causeway Ln, Medfield, MA 02052; w1lio@juno.com.

* September VHF QSO Party open to club competition: The ARRL September VHF QSO Party has been added to the list of Affiliated Club Competition contests. This change becomes effective with the 1999 September VHF QSO Party. The September VHF QSO Party now joins the January VHF Sweepstakes as a VHF/UHF Affiliated Club Competition event. As an Affiliated Club Competition event, the leading clubs in the Unlimited, Medium and Local categories win a coveted ARRL gavel, signifying the club's accomplishment. Guidelines and rules for ARRL Affiliated Club Competition are found at the Contest Branch Home Page at http://www.arrl.org/contests/cc.html as well as in the "General Rules for All ARRL Contests" in the November 1998 issue of QST. The ARRL also sponsors the June VHF QSO Party, the August UHF Contest, the two 10 GHz and Up Weekends, and the annual EME Competition.

* SUNSAT launch scrubbed yet again! The launch of a Delta II rocket carrying the SUNSAT, ARGOS, and OERSTED satellites was called off for the ninth time Saturday, February 13, 1999, due to an unexplained glitch that appeared in the telemetry readout of a critical airborne power supply's voltage. Delta II launch team member Eric Lemmon, WB6FLY, notes that this is the second launch delay caused by a hardware problem; the other scrubs all were related to unacceptable high-altitude winds. "We have a recovery plan to change out the suspect packages and launch on the morning of Monday, February 22," Lemmon said. The Delta II has been on the launch pad for more than a month now.

* QST Cover Plaque Award: Larry Tyree, N6TR, received the January QST Cover Plaque Award for his article, "Kid's Day!" Congratulations, Tree!

* Wisconsin Amateur Radio Operator Recognition Day: April 22 will be Amateur Radio Operator Recognition Day in Wisconsin. A proclamation has been

approved, and there will be a ceremony in March for Gov Tommy Thompson to officially sign the proclamation. The ceremony, recognizing Amateur Radio's role in emergency preparedness and response, will be in conjunction with the Tornado Awareness Week proclamation.--thanks to Mack Brophy, N9NTB and Jim Romelfanger, K9ZZ

* Check out the "new" QEX: Can't get enough technical articles and challenging projects? Check out the new QEX! If you would like more technical articles and challenging projects, look for them in QEX. This bimonthly publication (64 pages) offers you more than four times the technical content of a single QST. Ham radio technical experimentation is alive in QEX. In the March/April issue you'll find: vertical antennas--modeling and building a quarter-wave on 160 meters; Remote base operation; homebrewing dream station; better filters for QRP rigs; killer front end; propagation from the edge; 6-meter power; power for MOSFETs, and much more. Visit http://www.arrl.org/qex/ to see.

* ADI sponsors ham radio testing site: Premier Communications, which makes ADI and Pryme products, has debuted its HamTest.com Web site to help ham radio neophytes study for their Amateur Radio examinations. The site, http://www.hamtest.com, provides simulated tests, access to all question pools, and a link to the ARRL/VEC home page and the database of upcoming test sessions. Help is available by posting a request in the interactive user forum. Advice from experienced hams is available in the "Elmers Chat Room." Use of advanced features requires a Java-enhanced browser. The site materials are available free to all. For more information, send e-mail to elmer@hamtest.com. The ADI/Pryme site is at http://www.adi-radio.com.--ADI news release

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site,
http://www.arrl.org/members/. You'll have an opportunity during registration
to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other
material. Registered members may visit the Member Data Page, under "What's
available here?" on the Members Only Web Site, to change their selections.
Click on "Modify membership data," check or uncheck the appropriate boxes,
and click on "Submit modification" to make selections effective. E-mail
delivery changes typically are effective immediately. (NOTE: Please do not
ask individual HQ staff members to change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news
and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of
charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be
posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio
Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject
needed). The body of the message should say "subscribe letter-list" to
subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via the Netcom
listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message
to info@arrl.org. The subject line should be blank. In the message body,
type "send ltrmmdd.txt", where mm represents two digits for the month and dd
represents two digits for the day (The ARRL Letter is published Fridays).
For example, to request The ARRL Letter file for Friday, November 6, 1998,
type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL
Letter should be available via the InfoServer no later than the Monday after
the date of publication.

No idea Frank. The ruler I used only gives standard measure.

(5.5cms is about 1.58 inches)

Version 3.30 adds Internet DGPS!

Evaluate the effect DGPS has on the accuracy of your GPS receiver without investing in a differential beacon receiver. Download SA Watch from the SA Watch web site, http://www.sni.net/kawin/pages/sawhatis.htm

SA Watch uses an Internet connection to receive DGPS corrections originating from the Point Blunt, CA, USCG DGPS beacon to provide your GPS receiver with a continuous stream of correction data. Check out the SA Watch image on the SA Watch web site, captured from Boulder, CO. Of more than 1,800 samples, 99% were within 4 meters of the reference point!

This feature is of greatest value for observers within 2,000 km of San Francisco, CA, but useful insights can be gained from most of North America. Thanks to Wolfgang Rupprecht for the data stream.

Install a security alarm door reed switch under the vcr and glue the
operating magnet to the VCR base.
>
>2) Triggering the record function on an old Sony CCD-V9, 8mm camcorder:
>how can the camcorder be put in record mode automatically?
>
If it's an old one you could just solder a small relay contact across
the record button, as long as continuosly pushing "record" doesn't
affect the recording; if it does, use a pulse circuit to drive the
relay.
If the camcorder has an IR remote control, or you can attach it to an
old vcr which does, you could wire up the remote control handset as
above and conceal it in the VCR stand where the camera vcr can "see"
it.

Alternatively, for a completely self contained solution; build the
remote control into the casing of the VCR which is liable to be
stolen, along with a small battery powered circuit which is activated
by a tilt switch and continuously activates "record" on the remote as
above.
If the security vcr is concealed in a suitable place with a good view
of the room, there is a pretty good chance the theif will
inadvertantly "point" the remote at the security vcr on his way out.

>the newer stronger batteries??????
>is the charging time just doubled..???
>The charge time for this charger is 15hours for the 12v 600ma..

The MAH batteries will charge fine with the "wall wart" (slow) charger, at
an increased charging time.

The MAH batteries will NOT work with the Yaesu Quick Charger.

The truth is that other things "get through" too. Beeps of just about any sort decode with greater reliability than does voice in the presence of noise - whether they are Morse encoded beeps, or ASCII encoded beeps, or any of a variety of other kinds of beeps.

The military has a need to have their communications systems virtually idiot proof. Because of the turnover problem, the systems must be usable by personell with a minimum of special training in its use. Manual Morse code does not lend itself at all to use by untrained personell. The fact that the digital coding must be sent and received by machine anyway lends itself to the more robust error correcting modes.

Not according to a steel tape measure I've just found, that has those
French units as well as real ones...

5.5 "cms" is roughly 2.25". Your 1.58" is about 4 "cms".

Forget those cheap foreign measuring units and stick with the real thing
:-)

I have two Kenwood TM-V7 mobiles and quite like them. I am a licensed MARS operator and have perfomed the modifications to them both. When I did, I noticed that I could no longer transmit stored DTMF numbers, nor could I operate the unit remotely using an HT via DTMF commands. Has anyone else had the same problem?

In America, that is restricted to 51 MHz and above. It is not
legal on HF except for government and police users.

Not really a problem though, because multiple tone modems
are usually poor performers, and even the military uses them
only because JTIDS is taking forever to deploy...

Since you state the VCR an TV is plugged into an extension cord ,you
can make a device that will detect a loss of current when the VCR is
unplugged (they always draw some current.) Have that circuit trigger the
camcorder somehow.

Thanks for the good idea.

But the room will be used by others, and the VCR will be used, probably.
Only when it is being unplugged, or picked up do I want to record the
video picture of who's doing the unplugging or picking up.

Any other creative suggestions?

Thanks,
Dave

This is interesting. I have often wondered what train of thought leads
one to conclude that software piracy is justified. Someone had to put a
lot of time and energy into programming, so why should their efforts be
considered public property? This is kind of like building a house by
hand and then having someone come along and claim that that you should
give it to them for free. Granted, it's easier to copy software than to
copy houses, but the principle is the same. Perhaps a better example
would be that of a detailed architectural design.

Mark,

I should clarify a few points -- First, it's pretty clear that almost all of the usable frequencies in the broadcast spectrum are already allocated or are in current use, particularly in urban areas. Even if there were an unused frequency available, how would you handle a situation where a revenue-producing station (or new station) needed that frequency? Would you agree to vacate it in deference to the commercial station? If not, then a big problem arises -- a trade-off of jobs and GNP-enhancing business that must be weighed against the interests of a hobby station. The outcome would be clear.

My mention of GMRS, FRS etc was simply an illustration of what kind of public access is possible when a dedicated frequency spectrum is allocated for a specific use. Such a spectrum could also be assigned to microbroadcasting, as I mentioned in the previous post. I agree that there would be a reducing audience initially due to technical considerations, but think about what happened with the advent of commercial FM Stereo broadcasting -- everyone who cared about it had to purchase a new radio. The addition of a switchable converter in the antenna line isn't really that big of a hurdle if the public demand is great enough. As an added benefit, parents who were concerned about the uncensored content of the new microradio band could more easily exercise control if a converter were required.

In a nut shell "stuff" from the sun hits the north pole and creates an ionized field that radio signals can bounce off of. During a big storm swing your 2m and 6m beam north and work other stations off of this temporary ionized reflector. These particles hitting the atmosphere also create light that can be seen, known as the aurora borealis or commonly called the northern lights which appear as quick whisps of light that wave across the sky, or during a really good one a wavy curtain of light filling the sky. 2 and 6m enthusiast pay close attention to meteor showers and solar activity as it is short lived and the strange propagation effects it has on those frequencies. This phenomenon can also create problems with power companies in the north as electrons hit high power lines and can cause the line voltage to sky rocket, additionally it can cause problems with satellites passing though this "cloud" of particles.

Well gang did I get it right?

Well the Novice and Tech are sort of paired together, you can just take the Tech Exam but the Novice (written) is a part of that exam so while you may bypass getting a Novice ticket you still must pass that exam on your way to the Tech.

Now for my soapbox commentary, get a Novice license! Buy an inexpensive HF tranciever (one can be had for well under $100 or a single band unit for even less) get on and enjoy making contacts using CW in the Novice band. You can start enjoying radio while you continue to study for your Tech exam. Then when you return you only have to pass the Tech portion. Depends on how quickly you want the Tech license I suppose but there is a lot of value IMHO in starting as a Novice and learing how to operate as you move up.

4159. Looking for a "peculiar" power transformer for audio applications

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-19 00:00:00 UTC
From: Tom <tom22@verio.com>
Message-ID: <36CCC4AA.64744385@verio.com>
Source record: 150230
Cross-posted to: sci.electronics.design,rec.audio,rec.ham-radio,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Hi,

Actually, the transformer that I am looking for isn't THAT peculiar or unique, but I just can't find it anywhere. I am looking for a dual primary (for either 120VAC or 240VAC) triple secondary power transformer. One secondary winding is for, say, 10VAC from which +5 VDC will be made. The other two secondaries, which could be a center-tapped autotransformer, will be for 25VAC, from which +/- 15 VDC will be made. All that might seem strange to get from one transformer but if one looks around at power supplies, one sees that +5, +/-15 Volt supplies are quite common, especially for use with audio systems.

I have tried a number of web sites (all the obvious ones) but can not find the transformer that I am looking for. Please help if you can lead me to the right manufacturer.

Thank You
Tom

If your trying to somehow compare the QRM that is associated with working a rare DX station with the mess on 75m your failing miserably. I've worked more than my fair share of pile ups and yes you do occasionally get a few lids along the way, but if you look at the majority of operations in the lower 100khz you'll not find anything remotely close to the jamming and general BS that you find on 20 and 75 phone.

Wouldn't it be awesome if you could build a HF xcvr kit with 100 Watts PEP
and the works like that?

From looking at their web page though, it looks like the thing is just barely
coming onto the market.

Didn't see any sensitivity or selectivity figures either.

And that's just my opinion, I could be wrong. :)

Microtran (digikey carries them) has a similar one to your description.
Actually the analog supply secondary is center tapped.
Expensive. Can't you use +/-5 for your analog supplies? Then you could use
a garden variety transformer.

Or, if your quantities justify it, have a custom tranformer wound with one
secondary at 10V and another at (say) 15V and use two half-wave rectifiers
(2 diodes) for the analog supplies.

In the case of the Microtran product you would just use a
bridge rectifier to create the two analog supplies.

Hello.
I'm waiting for my VX-5R to be sent to me in Mexico...
While I wait, I would like to know if anybody knows about a modification that can be done to the radio to be able to receive the full 800 & 900 MHz band, including cell phones.
Also, if you know about other mods (extended TX, etc.), any help will be appreciated.
You can reach me at:
egrebot@internet.com.mx
Thank you very much,
Emilio XE1YGN.

> satellites passing though this "cloud" of particles.
>
> Well gang did I get it right?
>

Well, not quite. The electrons from space can't penetrate the
atmosphere very far (but they do exite the upper atmosphere, which
causes the auroral glow). The magnetic field variations in a major
geomagnetic storm are what can cause some headaches to power companies,
especially those located nearer the Earth's magnetic poles (like Canada
for example). These changing magnetic fields can induce electric
currents in oil pipelines (causing some corrosion in joints) and in
power lines which can trip circut breakers to trigger some power outages
if those at the switch are not on the ball (which is one reason why
solar astronomers issue the alerts). As for HF propagation, geomagnetic
storms can cause major degredation in the quality of signals refracted
from the ionosphere, causing lousy reception (and in polar-path signals,
it can cause auroral signal blackouts). Still, the visual display of an
aurora is quite pretty and well worth a little time out in the cold.
Good propagation to you.

In case you weren't aware, BYTE was started by Wayne Green but he had
to give it to his (one of ??) wife as part of a divorce settlement
back in the 70's or 80's. She then sold it to McGraw Hill I believe.

You need glasses! There are a set of figures on the site and a 100 watt
PA is due later this year. The radio is designed as a basic unit and
then modules can be added so that you only buy what you need.

All transformers like that are regarded by the industry as 'custom' and
do not feature in catalogues or lists. How many of them do you want?
Some manufacturers will make you as few as 12 (although the price may
not be attractive, it wouldn't be unreasonable) whereas others won't
entertain any orders for less than tonnage.

You just have to call manufacturers with your spec and ask.

> these batteries are now only available through Yaesu for twice the money
> as the newer batteries.....

I've found the yeasu batteries are twice as good as most of the aftermarket brands. Or at least here they have been. Usually , you will charge at 10% of the current capability of the battery for 15 hours.. Say a 1200, should be charged at 120 ma for 15 hours for full charge. So I'd think with a 60 ma charger on a 1200 battery, you will need to charge for 30 hours at that rate. It'll work, I charge 1000's and 1400's with a 60 ma charger. What I do to tell when charged is to put a voltmeter on the battery and when you peak voltage with little change after an hour, you are fully charged. Will vary, but on say a 12 volt car battery, it will usually be fully charged at 14.4 volts. When you unhook the charger it will drop back to 13.8 or so. It's bad for a battery to stay at full charge voltage for extended periods of time. You should always unhook when fully charged or else the battery gets hot. Another kinda unprecise way to tell if charged is just to pick up the charging battery in the hand at room temp. If it feels cold or even room temp, it still needs more charging. When you pick it up and it feels very slightly warm to the touch, you are pretty much charged up. A voltmeter is the best way to tell though. It will never lie, once you know what your full charge float voltage is. I use 7.2 volt cells. If I remember right they are full at about 8.4 v MK

> I purchase about 4 batteries a year for my Handheld.. "Smitty" N5WPV

I guess they are ok, but the last supposably "super heavy duty" battery I got from Mr. Nicad sure didn't last too long. It was a 1400 and it's already deader than a doornail. Funny part is, I have an original yeasu 1000 battery that is still going strong and it's much older than the Mr.nicad. Heck, it was old when I bought the mr.nicad 1400. I'd ask about the specific brand of the internal cells and go with the highest quality you can find. Might cost more, but it'll be worth it in the long run. I find the original yeasu batteries are the best. Don't know what brand cells they use, but they make most others look like junk over the long haul. I imagine mr.nicad can get the high quality cells as well as the other companies. BTW, my radio is a 470. Different case than the 530 I think. Mine uses the fnb series batteries. You can also buy just the inserts too. But taking the cases apart is not for the faint of heart. I use a hot hairdryer first and then a sharp razor blade to cut the glue seal. I still tend to mangle em a little before it's over with. The dead 1400 case , I converted to a regular battery case. MK

HAMFEST March 7, 1999 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - MARCH 7, 1999

On March 7, 1999 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway
Lindenhurst, Long Island, NY

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $6.00.
Free Admission for spouses and children under 12.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Peter Portanova WB2OQQ at(516)541-4886. Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

sure do...

brother came home in july to discover the IRS had disallowed dependant deductions claimed because the social security numbers didn't come up in a cross reference search...

total bill was going to be something like around $4K with penalities and all that.

since the kids are like 8 and 16 and had been claimed before - once i got everyone settled down and got him to call the 800 number on the form's second page instead of getting worried about the claim of money owed on the first page, we got instructions, we followed 'em. everything solved in 10 days. (took a couple of days to get copies of the kids' SS cards and the package mailed off, have it get opened at IRS and processed.)

there was either a glitch in entry or a burp in the storage. both kids had SSNs of 777-77-7777.

even the IRS folks on the phone thought this was pretty silly - especially since the info was there in the past return data they could see.. the filing of the paperwork was to make sure that it wouldn't turn up again. probably total cost to get everything set right again was a hour or two getting the details on the phone, copies made and sending it all off.

KF4OAZ here, I am looking for the mods to the RCI 2970 for a fellow HAM.
any info would be appreciated.....like how to demodify from 11M back to
10stock.
also....what are the PWR mods so i an set them back to stock??

Some 11M junkie screwed with the radio and we need to set it straight.

4205. New Group for Amateurs

Gentlemen,

Amateur Communication Emergency Services is an organization set forth to offer assistance to local and state organizations that may need emergency communication. The big differance is less politics. Also more of what we need, relistic SET's. I vow that this organization will stand behind the amateurs not personal agendas like the ARRL.

Membership is free. All you have to do is send me an email for more info.

Thank you for your time.
Greg Godsey
National Director
ACES

Wishful thinking ... my son is a Radioman in the Navy ... he's in the
elite EOD unit, in fact. Never had to learn a single beep. But he
learned a LOT about computers, networks, and digigal communications.

The blinker lights used for short range shipship comms don't
count ... in fact their use was a major conrtibutory factor in
a fairly recent collision between two Navy ships that caused
over $10 million in damages.

I've heard this wash before, do you REALLY believe that when a station comes on frequency from a rare country that there wouldn't� be a pileup if there were no DXCC? Give me a break. The competition of breaking a pile up goes far beyond DXCC
The skill of putting your tx freq on the last call worked to assure you get through the DX stations 250Hz filter, timing you call, and a whole host of others make it fun to work a rare station. I've broken many with 100 watts and a dipole within just a few minutes. I've also got more cards to apply for DXCC but probably never will. Why does every little thing wrong with ham radio always boil down to some ARRL conspiracy?

Hi...

I'm cleaning house. I'd like to sell out some of my satellite books.
I have the following books for sale. (Sorry, I don't want to separate
them....buy them all, one price.)

ARRL The Satellite Experimenter's Handbook
by Martin Davidoff K2UBC
Retail: $20

The ARRL Satellite Anthology (2nd Edition)
The Best of Recent QST articles on amateur satellite operation and hardware
Retail: $8

ARRL Weather Satellite Handbook (Fourth Edition)
by Dr. Ralph E. Taggart, WB8DQT
Retail: $20

The Amateur Radio Astronomer's Handbook
(Build your own radio telescope!)
Retail: $19.95

I'm asking $25 for the whole package (plus $5 shipping).

If interested, please send email to the address listed in
the signature below, and we can swap address particulars,
or I can answer any other questions you might have.

Thanks...

Ken, N1NEG

--
My real email address is almost "ken@wino!!!!!grad.com".
Just delete the exclamation points, and it's for real.
Sorry about this complication, just trying to avoid spam mail.

Translated from 12-3-98 Edition of "Lesumapurge" The News of The Islands

Sea bandits Rob Pleasure Boaters

A 12 year old Mapu Island Boy has helped in the rescue of 3 pleasure cruisers from Australia. Napoi Blepp was at the Mapu Island radio quarters with island elders when he received an "SOS" on a fishing emergency channel.
" I heard the morse code of SOS". said the youth. Many Island Elders Praised the boy for his quick action.
"Many of the Island Tribes rely on the radio to keep in contact with the fisherman and rules are very strict about who may use radio(s)". Told the Island Chief Mojabani.
"Napoi heard an old form of communication from the first day of ship radio(s)."

Chief Mojabani used the space-sat to tell District Police patrol boats of the Emergency signal from the area 230km south of Tigine Island (near Fiji). When Patrol Boats found the 44 meter Blue Spring it was "adrift with sails down" said Captain Ki Plenease of District 2 Police Boat " We found it was victim of area sea bandits who had beaten the men on board and taken possessions such as money and VCR"
The Police say that all 3 men had their tongues cut out.
"Many bandits in area do this to avoid prosecution by government forces." Captain told The News of the Islands.

The men received first aid on the way to Fiji and are under treatment with severe injurie(s).
Police and Navy patrol units are still looking for the bandits.

By what experience, training, and professional standing do you have any qualification to determine what the FCC's priorities are?

>nor should FBI agents take time away from fugitives, murderers,
>terrorists ... to deal with petty radio matters.

FBI agents do what the Department of Justice tells them to do. If Justice determines that they need to assist the FCC or to take over a case, that's what they do.

>FCC needs FBI babysitters when they close pirates for example.

Wrong again. The Court issues an order (warrant) to seize equipment. The U S Marshal Service - an arm of the Department of Justice - executes the court order. The sole role of the FCC in such a situation is to advise the Marshals what equipment to seize in accordance with the order.

At times the Marshal Service may request assistance from any other Federal or local law enforcement agency in the execution of the warrant. In some instances the FCC will take temporary custody of the equipment (on a hand receipt to the Marshals) pending return of the warrant to the Court, and at the time of the return of the warrant the Court may order the FCC to retain custody of the equipment pending its use as evidence in a criminal action or as the res in a civil forfeiture action or pending further court order.

Always helps to get the facts straight.

The warrants are addressed to "any Federal officer authorized
to execute warrants" and at times we have used the ATF and
Customs Service agents to execute warrants when Marshals
weren't available.

Does anybody know if there is, or ever was, a modification for the ALINCO DR130 that would expand the number of channels in the unit? I am researching this for a friend. I don't own one of these, myself. Any information regarding this would be helpful. If possible, please respond direct to my email address as shown.

Thanks in advance.

Few days ago someone on here said that CWID is not required
on PSK31 mode. If the above paragraph is still in effect
unchanged, that would be incorrect. Anyone know if the above
is still in effect? I've been assuming that it is.

The term "HAM' refers to to three individuals in the beginings of amateur radio. In the days of the first amateur station "HAM" are the first letters of the three guys (I can't remember their names) and was assigned to their station.

Is this close enough??

Reguards..

For as-yet unexplained reasons, the filesystem on my host (a shell account on oasis.novia.net) seems to have corrupted itself, and truncated the previous-poster database. This seems to have happened sometime in the last few days. I have also noticed other files that have corrupted themselves (usually by truncation to zero). The script that I used to send these welcome messages ran reliably for over 2 years, so I'm certain it was a file problem.

I have shut off the welcome message service by removing it from my "cron" file under Unix and brought this problem to the attention of the Novia administrators. Unless the original previous-poster database can be restored, and I can add some fault-tolerance to Tom Boutell's original program (such as exiting with an error if more than, say, 20 posters are identified as new), I will shut off the service permanently, as it was never my intention to annoy posters by sending them more than one copy of the message to each unique address.

I'd like to thank the dozen or so posters who informed me of this problem, and I apologize for any inconvenience this may have caused you.

Anyone have a schematic for this brute?

Looking to restore mine... Mint condition inside and out, but there is a
fried cap in the power supply section and a couple other "missing" parts.

Thanks!

Non-sequiter, Dick.

This doesn't specify that you must ID in CW, only that if you do it must be in English at 20WPM or less.

CWID is not required in any mode, except CW.

4254. RX-320 Free Software

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-20 00:00:00 UTC
From: mktg@ix.netcom.com
Message-ID: <36d20f9c.14847122@nntp.ix.netcom.com>
Source record: 150055

February 20, 1999

Dear RX-320 User,

Beta Version 1.0B is now available for the software I
wrote to operate the Ten-Tec RX-320 receiver.

Changes from Version 1.0A:
- Program displays a list of scan files for you
to make a selection. It is no longer necessary
to type the name of a scan file
- AGC setting now works correctly.
- The setting of the Offset is saved between
sessions.
- The program code has been fine tuned to increase
efficiency and speed.

Features of Version 1.0B:

- Squelch (adjustable)
- Scanning of lists (files) with adjustable delay
- Tuning in a variety of steps from 1 Hz to 1 Mhz
- 34 selectivity settings
- Runs under DOS or Windows - even works on a 80386
computer using DOS

I would be happy to supply free of charge this Beta version
to anyone interested who has an RX-320. The software will not
function without an RX-320.

The program is supplied along with several other files in
a single zip file. Installation and removal are simple, as
the program does not affect any system settings either in
DOS or windows.

The program is easy to use - just press various keys to engage
the different functions.

Istallation, removal, and operating instructions are included.

If there is enough interest, the Beta version may advance into
a final version.

Send your request to my e-mail at mktg@ix.netcom.com and I will
send you the zip file by return e-mail.

Regards,

David

Some years ago we had a similar problem with office equipment
disappearing. In our case, since there was a building watchman on
duty, we triggered an alarm; but the idea we used might be applicable
in your situation as well.

I don't remember the circuit details, but it was basically a solid
state relay triggered by breaking a fine wire loop which was attached
to the bottoms of the equipment. The wire came from an old audio
transformer, probably No.40AWG, maybe smaller, and was practically
invisible. In one area we daisy-chained it under two IBM Selectrics.

You couldn't even feel the wire pull and break when you moved the
equipment, as one of the secretaries found out when she forgot the
wire and decided it was time to dust underneath :-). And yes, the guy
was caught.

Provided the thief is slow. Many camcorders and VCRs take a *long*
time to go from stop to record, long enough to entirely miss a thief
who's in a hurry.

Another possibility: run the camera output to a frame grabber on a PC
hidden somewhere. Grab and store a frame every 5 or 10 seconds. Have
enough disk space for maybe 5 minutes of total images. As each new
image is grabbed, delete the oldest of the existing ones to keep the
space used the same.

Then, when the alarm goes off, you can save images from 5 minutes *before*
the alarm, as well as for some time after.

Dave

E.A. Sowter LTD (http://www.sowter.co.uk) will wind custom power and other audio transformers in any quantity for no additional charge, if you don't mind paying shipping from England. They charge only by the size of the core, not for how many windings you have, so you can have them do all kinds of funky taps. They also give free quotes and will tell you what size core you will have if you give them the voltage and current ratings of each winding. These transformers are a good value if you need high power and special features and are having trouble finding other sources.

from the current ARRL letter:

FCC SUSPENDS JERSEY HAM'S HF PRIVILEGES

The FCC has suspended for six months the HF privileges of a New Jersey ham. The FCC notified Walter P. Miller Jr., W2YEE, of Edison, New Jersey, that his privileges to operate below 30 MHz were being suspended for 180 days.

The license-modification letter February 16 from the FCC's Riley Hollingsworth, K4ZDH, came in the wake of an earlier warning letter to W2YEE. Hollingsworth alleged that W2YEE's 75-meter operation on the evening of February 4 was contrary to the Amateur Service Rules. Hollingsworth said Miller violated Section 97.1, basis and purpose of Amateur Radio; Section 97.101(a), good engineering and good amateur practice; and Section 97.119, identification requirements. The alleged operation took place on 3901 and 3950 kHz, the FCC said.

"Specifically, you were apparently broadcasting and talking to no particular station for several hours, during which time you prevented the use of the frequencies by others and maliciously interfered with other stations attempting to use the frequencies," Hollingsworth wrote. He said the Commission also had information indicating similar behavior occurred the next evening on 75.

"Such operation endangers the basis and purpose of Amateur Radio as a service, degrades it for other licensed operators and cannot be tolerated," Hollingsworth wrote.

Section 97.1 Basis and purpose, of the rules discusses the public service value of Amateur Radio, as well as its contribution to advancing the state of the art; expanding the reservoir of trained operators, technicians and technical experts; and enhancing international goodwill. Hollingsworth is on record linking certain types of on-air behavior with a negative perception of Amateur Radio in other countries.

A warning letter had gone out to Miller January 8 regarding similar operation. The FCC informed Miller at that time that he faced license revocation and fines.

Hollingsworth told Miller that the FCC was modifying his Amateur Radio license to prohibit HF operation for 180 days from February 16, the date of the modification notice. Miller has 30 days to formally protest the modification. If he does not protest it, the modification order expires August 16.

Jim,

Get a GE Superadio III ($59.99) and a Select-A-Tenna ($59.95) and
you'll have a great rig for minimum bucks.

Check out www.prescientsys.com . They have a piece of software called
GOTCHA! that I've been looking at. It uses a computer with a video capture
device and camera. Stores the images on your hard drive. Only captures
images when there is movement. Sounds like it would work. Cost might be a
problem but f you could find people to lend you the parts (this sounds like
the problem will be solved once the thief is caught) you might be able to
get away with just the cost of the software. I don't remember what it
costs but I'm pretty sure it was under $80.00.

Good idea on the reed switch but be careful when putting magnets near magnetic sensitive tapes as in VCR tapes find another method. Also check with an electronics supplier for level switches or contact switches such as in what is used on window alarm systems which are not magnetic. There are contact switches which will activate when they are not in contact with a surface or vice versa, usually a tiny plunger style device.

Not all have poor manners yet it's still a mess of a pig pile.

Besides, ARRL IS the cause. They approved the whole BS system of entities to make more bucks and give newly retired Honor Roll dweebs a reason to stay in the chase, thereby insuring their dues for years to come. No dues, no DXCC stickers. While idiots are the direct cause, the constant parade of ARRL announcements of idiotic new entities and ongoing pre trip "look at me" blurbs by insider traders like OH2BH are the catalyst FOR the stupidity.

In a message dated 99-02-18 05:17:27 EST, Ed Dante wrote:

<<<<
Also, I am looking for someone in the NYC area who wants to practice cw on the
10 meter
>>>>

On the air is a GREAT way to practise CW. The following is from my post *CW
and RAGCHEWING* dated Jan. 28, 1999
==========
I have always enjoyed *conversational CW*, and advise it to people who want to
increase their CW speed. Put the paper and pencil away, kick back and shoot
the breeze, with CW.

Shortly after I upgraded early 80's, I was listening to a conversation (A3)
where they were talking about CW. One gentleman said that he has known how to
talk almost all of his life, but he really had to work at learning CW and
getting his speed up to upgrade. So that he doesn't lose his CW skills from
lack of use, he always gets in 3 CW QSO's before switching to phone.

"GREAT IDEA", I thought. "I think I should do the same". But my 3 CW QSO's
(15-20 wpm) ended up lasting several hours, and then it was time for bed.

So I ended up keeping my microphone in the box in a drawer, and pulling it out
from time to time to see if it still works.
==========

Another good way to increase your CW speed is the ARRL code practice. Slow
code goes from 5 to 15 WPM, and fast code goes from 10 to 35 WPM. They
transmit 3 times every evening on every ham band from 160m to 2m, except 12m
and 6m. See the ARRL Web site for more info.

> should be allowed to use radio spectrum at will.

I said there are priorities and ham radio isn't one nor is Taco Time's drive through unless they're using 50 kw FM systems with Walkmans for ordering.... nor should FBI agents take time away from fugitives, murderers, terrorists (and that annual no-blacks-allowed picnic they hold with ATF every summer in VA...) to deal with petty radio matters. FCC needs FBI babysitters when they close pirates for example.

Well it causes no problems when school boy Franky
wants to pretend he is a man. The problem arises
when pretending to be a ham and geting on the air.

games begin.

4300. Announcing OTK enterprises-new filter update

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-20 00:00:00 UTC
From: ka9dhz@webtv.net
Message-ID: <7almc6$6r2$1@nnrp1.dejanews.com>
Source record: 150101

OTK enterprises is field testing it's new Hollingsworth filter.Future candidates will find tech questions as to the common and widely used Hollingsworth filter.

The Hollingsworth filter can be activated,when installed, like using notch. When used it filters out unwanted moronics.Sounds like HO HO, slurred drunken speech, and also those communications consisting of mono syllabic terms, err uhs,grunts, and beeps.

Look for results of the field testing in related press articles soon.

Yes it is true.

Part 97.84 g states *The identification required by this section shall be given on each frequency being utilized for transmission and shall be transmitted either by telegraphy, using the international Morse Code, or by telephony, using the English language. If the identification required by this section is made by an automatic device used only for identification by telegraphy, the code speed shall not exceed 20 word per minute.....*

The sonolert tone could be used to trigger the camcorder, hower.
Just use a electret mic element and a 567 tone decoder at the
camcorder to trigger it. You'll get pictures of your thief fleeing.

4308. Kenwood TS-570D Problem

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-20 00:00:00 UTC
From: Bryan Burgess <burgessb@wave.co.nz>
Message-ID: <7altmj$jj8$1@news.wave.co.nz>
Source record: 150109

My Kenwood 570D will not deliver full output power unless the load has an SWR of less than 1.2:1 (this is not using the built in ATU of course). My expectation from the manual is the rig should be good for full power into loads with SWR of 1.5:1. Are there any TS-570D owners who could comment on how their rig performs? Does anyone have a service manual for the TS-570D?

Source record: 150112

Jim,
What I would do is get a moderately priced AM radio ($25-$50) and perhaps go for better tone quality. Then I would get one of the Select-a-Tenna, external AM antennas for it. These things run around $60 mail order. All you do is set it next to the AM radio, tune it to the frequency you want to listen to and thats it. You don't have to wire it in, and it doesn't run on batteries or electricity. The Select-a-Tenna will bring out stations you couldn't even hear into a very listen-able signal. I have one and am amazed at how well it works.

It sounds like you have the answer for how to trigger the event covered.
The next step is using that trigger to start the camcorder for it's role
in the process. One possiblility is that if you place the camcorder in
record mode and then remove power it will retain that state when power
is restored. Only you can determine if this is possible. It may reset
itself to another state at power up or it may not. If it does remain in
record mode your questions are pretty much answered.
The device used as the trigger makes and breaks the power to the camcorder.
When the vcr is picked up power is restored to the camcorder and your
recording begins. It stays on until you run out of tape or come along and
find your vcr gone again and the system activated before the tape runs out.

If the camcorder loses it's record state when power is removed I can think
of no other possible suggestions at this time. If I had the unit here to play
with that would be another story but you have been just informative enough to
raise an interest but not enough to provide all of the solutions.

>FSK???

An interpretation of the above from Gordon West's Advanced Class
study manual says, "A station may identify in a digital code
(such as packet) as long as the digital code is an integral part
of the type of transmission from the station..." Hence, identifying
in FSK would be appropriate if most of the transmission was made in
FSK.

RTTY now covers many types of data transmissions, not just the
familiar 5-level Baudot code.

Someone recently referred my to the PEST website for information concerning the conversion of a Sound Blaster sound card for Packet use. The website really doesn't describe the step by step process for this conversion. Can anyone refer me to a good book or a website that explains the process in simple terms because my education exceeds my intelligence???

There seems to exist a device which can be implanted in the left nostril. This device receives microwave radio signals. It can cause a person to hear barely audible transmissions designed to change their thoughts or make them think they are losing their mind(mental health frame up). It can also be used to transmit ultrasound in the brain causing a person to experience sickness, headache, dizzyness, blurred vision. Don't know if FBI has authority in this area. A signal to destroy a man's life seems to be coming from 2413 C ST Omaha, NE USA

Somehow the Israelis just managed to go from "terrorists" to "freedom fighters"
within two paragraphs. Why doesn't this magic transformation extend to all the
others in the Middle East too ?

> spectrums.

For example, a 50 kW FM broadcast transmitter with a parasitic oscillation or some other kind of spur can (and has) put out a healthy amount of signal in the midst of the adjacent VHF aircraft comms or nav band. Not a good thing for an airplane who is trying to do an instrument landing at the nearby airport :-(

In addition, most broadcasters today don't even have full-time engineers but rather depend on contract people to do the bare minimum of repair, etc. to keep the money machine "on-the-air". While some contract engineers (and even station engineers who are regular employees) are indeed very good at what they do, they are spread increasingly thin and often more subtle points of operation like spectral purity, etc. do not get the attention (time, equipment, money, priority, etc.) they deserve or may have gotten in the past [during proofs, etc.]

So yes, I think the FCC does perform a vital service here --- for tower lights as well as interference to other services like air navigation, public safety land mobile, etc.

IMHO, anyway.

Source record: 149896

N1QQ de K4YZ,

I have been using the Reyco/Unadilla traps for my antennas for years. I have two trap antennas fed at a common feed point fed with RG8X.

Antenna #1 is cut for 80 and 40 meter CW. Antenna #2 is cut for 17 and 30 meters. Actually, the 17/30 antenna is more like an inverted vee since it is so short, but there is no interaction that I can detect. I can go directly to the portion of the band that I have cut that part of the antenna for without a tuner and have a near 1:1 match. The two section are 90 degrees from each other, rather than in the same plane.

They are a bit pricey to get the traps, but I have had the KW40 coils for 15 years now, and I only have had to do maintenence on them when Mother Nature had a fit and brought them down, or I got Marching Orders from the Marines and had to take it down.

I'd like to add the KW-80CW coils so I can extend the 80/40 antenna to cover 160 meters also.

Like any inductor, there are losses, but I have worked everyone I have set out to work with this system and 100 watts. The nice thing about the trap antennas is that you don't have to worry about tuning it. I have found the antenna to be reasonably broadband.

On 40, I have the antenna tuned to minimum SWR at 7040. It's still less than 1.8:1 at 7000 and 7100. That beats most trap verticals I know of. And the 80 meter antenna is tuned for 3550. It's still less than 2:1 at 3500 and 3650.

30 and 17 meters are such narrow bands that the SWR never exceeds 2:1 at the edges.

The drawback, of course, is that you are limitied to those bands. But unlike a G5RV that requires a tuner, I can roll the whole thing up into a handful of coil and stow it, and the tuner is one less item I have to carry if I have to minimize what I am carrying.

And when war weather comes around this eason, I am putting them in PVC "capsules". The ice really threw the tuning way off, despite having had clear non-conducting coating on them.

Hope this helps.

According to experts (three gentlemen who have collectively spent decades working on batteries - and wrote the book, "Batteries in a Portable World"), properly treated NiCds will last much longer than properly treated NiMH cells.

I am talking about cycle life. Sure, NiMH cells provide a lot more energy in the same size case...but unless they are treated properly, they only last 1/3 to 1/2 the total discharge/charge cycles as to modern NiCds.

The root cause is failure to control my vehicle
if I hit someone...or if they hit me. SPEED has
nothing to do with it except as an element of the physical
conditions. Speed is rarely the reason for most
accidents although it s often cited as a cause.

Most highways and streets are posted for speeds that
are below that which are reasonable for the actual
road. In some cases like residential areas there are
other mitigating reasons for lower speed limits. On most
highways, however, the speeds should be set to what
is rational and proper.

>close pirates for example.

Ahh, close pirates! Translation of above...just ignore the pirates as long as there may be some bigger fish to fry elsewhere. That can be the same argument made about any police or government enforcement. Why have an anaimal control official when that person's salary could pay for another cop to wage the war on crime? Why have cops doing any motor vehicle enforcement when they could be doing criminal investigations, etc.?

It is all a matter of balance. Ignore totally the small law breakers and then that type of law breaking becomes acceptable. Sorry, no can do.

Cheers,
Bill K2UNK

Hello Jeff...

Well, it seems to me that in PSK31 the CWID is in reality MCW which is not allowed in the HF bands EXCEPT when it is used in accordance with Part 97.3(c)(5) in the phone sub bands. This would make the CWID use illegal, wouldn't it?

This whole 'emission type' and 'sub banding' fiasco should be TOTALY revamped the micro-managing of all this is stifling.

A 27 ft trap vertical with one trap will run 40 thru 10 meters nicely. L/C traps are high Q and restrict bandwidth, but the use of coax traps (lo Q) will give you pretty good bandwidth.

I thought about it at one time but instead built a multi-element dipole, it's basically three separate dipoles cut for 40,20 and 10 they are all fed at the same point and using PVC I separated the elements about 6" each although I've heard you can go much closer. This is a very easy antenna to build and tune since each element is trimmed separatly with little to no interaction with the other bands. Works very well and no need for power concerns that you might have if you make traps.

It's the old double standard. The guys we back are "freedom fighters",
the guys the other side backs are "terrorists". But they're both the same,
doing the same things for the same reasons. The winners get to write
the history books, so their side always comes out on the side of the
angels, whether they actually were or not.

>I should clarify a few points -- First, it's pretty clear that almost
>all of the usable frequencies in the broadcast spectrum are already
>allocated or are in current use, particularly in urban areas.

This is undoubtedly true if your aim is to establish yet another
100,000 KW EIRP monster, but there are many holes that could
be filled in by much smaller stations. The ants in my backyard do
not affect me in the use of my property.

>Even if
>there were an unused frequency available, how would you handle a
>situation where a revenue-producing station (or new station) needed that
>frequency?

If there is a small hole that would only allow room for a 10 or 100
watt station, commercial broadcasters (if limited to one per market)
would show little interest. As you say, most of the slots for big
stations in urban areas are already taken.

>Would you agree to vacate it in deference to the commercial
>station? If not, then a big problem arises -- a trade-off of jobs and
>GNP-enhancing business that must be weighed against the interests of a
>hobby station. The outcome would be clear.

As explained above, this should be a non-issue, but if it were not,
would you trade free speech for jobs? My position on this is clear.

>My mention of GMRS, FRS etc was simply an illustration of what kind of
>public access is possible when a dedicated frequency spectrum is
>allocated for a specific use. Such a spectrum could also be assigned to
>microbroadcasting, as I mentioned in the previous post.

Yes, it could be assigned, but you present no valid reasons for not
re-using the existing spectrum in a more efficient manner.

>I agree that
>there would be a reducing audience initially due to technical
>considerations, but think about what happened with the advent of
>commercial FM Stereo broadcasting -- everyone who cared about it had to
>purchase a new radio.

This is a poor argument because the FM Stereo technology did not
preclude existing owners of monaural FM receivers from listening to
the stereo broadcasts.

>The addition of a switchable converter in the
>antenna line isn't really that big of a hurdle if the public demand is
>great enough.

This is almost as big a joke as the commercial broadcasters who
insist that the internet is the best medium, and that the microbroadcasters
should go there. To them I say, "If it is so good, why don't you give me
your transmitter in exchange for a PC."

There have been such converters available for half a century that
enable those with conventional AM receivers to listen to shortwave
radio broadcasts. How many people do you know (who aren't hams)
who own such converters? It sounds like you want the microbroadcast
folks to go somewhere else (not in my backyard!). Well, it ain't gonna
happen!

>As an added benefit, parents who were concerned about the
>uncensored content of the new microradio band could more easily exercise
>control if a converter were required.

This would be an even bigger joke than the dreaded V-chip.
It should not be the responsibility of broadcasters (of any kind)
to determine what is and what is not good for your children.
That is *your* job, and I will resist any such attacks on your rights.

Curt, your proposals, if enacted, would ensure the failure of a
microbroadcasting service. Perhaps that is your goal and I have
merely wasted my breath. I see a ray of hope in that that appears
not to be the goal of those who would the recent NPRM. I hope
that you have read it by now...

They do if the yard is allowed to become overrun with ants, thus rendering the
properly essentially useless for it's primary occupants.

LPFM is a VERY BAD idea. If implemented as currently suggested, the FM band
will become riddled with interference and will soon resemble CB Channel 19 when
the skip levels are at S-9.

I too have tried the parallel dipole approach. Be sure, when you start
trimming for lowest SWR on each band, that you begin with the lowest
frequency band first and proceed in order to the highest frequency band.

I've seen that design before and have wondered what effect the two dipoles
not in use would have on the overall radiation pattern. I hope they're
not playing the role of a director and/or reflector! If so, then you're
signal would be orientated straight up or straight down. =:o

"Ham" radio comes from the old term for amateur actors and show people who were also called "hams." Ham sounds like amateur. I guess it was an inference of amateur actor's tendency to HOG the stage.

>73, Jeff WH6U

On second thought, if the elements on each side are parallel and in
close proximity to one another, then electrically each side appears
as a single but fat element, thus providing broad-band coverage,
correct?

What comes to mind are two lengths of twin-lead, each leg shorted
on one end:

```
--------------------------\ /--------------------------- 40m
----------------/| |\---------------- 20m
| |
| |
| | <--feed line
```

You are right, Gary. General Curtis LeMay once told an audience that he was happy we'd won WWII since he was sure he'd have been tried as a war criminal by the Japanese. I found that gem in a book detailing the creation, construction, and delivery of the first atomic bomb.

And as far as the guy starting this whole line of crap, come walk a mile in your enemy's shoes before you cry terrorist. Come with me to East Jerusalem some time (on your nickel/sheckel) and find out how bad the Arabs are and how good the Israelis can be. One day in 1995 I was very nearly shot by an Israeli policeman pointing a locked and loaded M16 my way for walking down the wrong street one day, not five minutes' trot from the Wailing Wall. This was followed by a full night of low flying F-15s to keep the Arabs from sleeping at night. I stayed (but didn't sleep) in the old National Hotel, which was full of Western medical doctors representing UNICEF bringing relief to the Palestinian children who were sick and starving literally to death, while not twenty miles away Isreali citizens shopped in a mall like you would find in any American suburban area. Doubt the UNICEF comment? Call their staff and ask for yourself. It's really troubling.

Both sides actions are beyond reproach, and it's up to us to get past this ancient blood feud. Using radio as a tool to bring goodwill and understanding between us all is a wonderful idea. Take your nasty comments and file them somewhere else.

No Franke wont be next. He is not a ham and has no ticket to suspend or pull. What will happen is equipment confiscation.

Frankie needs to be investigated in preparation of being declared CHINS. Child in need of services. If you read the neo nazi crap linked to his pages and postigs you will se a little kid headed for deeeeeep doo doo.

A little time in juvinle whould help if we could prevent him from being re names francis.

DONT DROP THE SOAP

Mark,

I have no intrinsic problem with microbroadcasting - I think that it has
a lot to offer if set up correctly. My objection to the way that the
issue is being surrently approached is based on two pragmatic themes:
First, the existing band structure is designed to support a
publically-accountable broadcasting INDUSTRY, not a large number of
unregulated microbroadcasters. The second objection relates to the
potential proliferation of obscene and/or harmful material on the
generally available broadcast frequencies. While I am a proponent of
free speech, I don't think that it's good for society if completely
unregulated material goes out over the air for our children to absorb.

Since microbroadcasting would not be a revenue-producing entity, no public recourse (such as advertiser boycott) would be possible if a microbroadcaster devoted itself to some kind of truly disgusting material.

I don't understand your reference to the potential failure of microbroacasting if an alternate spectrum allocation were used. How can a non-commercial entity fail?

On the other hand, I think that your proposal of squeezing microbroadcasting stations into well-established holes in commercial coverage deserves serious consideration. If this were done in a technically competent manner, it would result in a more efficient use of resources. My other reservations stand, however.

Curt Breneman

SB DX @ WW $OPDX.397
Ohio/Penn DX Bulletin No. 397

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 397
BID: $OPDX.397
February 22, 1999
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, K1XN & The Golist, K2DO, K2KQ, N2AU, WB2RAJ/WB2YQH & The 59(9) DXReport, NG3K, W3GO, W3UR & The Daily DX, K4CIA, N4GN, W5AJ, K7BV, K8YSE, W8EB, N9AG, BA1HAM, CE3CDV, DJ5AV & DX News Letter, G4BUE & DX News Sheet, HA5PP, HB9HFN, HL2KAT, JA8RUZ, ON6TT/5X1T, SM0AGD, UA0MF, VE3NQK, VK3TZ, VK9NS and XE1ITJ for the following DX information.

3D2, FIJI. Karl, K0KL, will be active next month as 3D2KE bewteen March 20-27th. Activity will be mostly on 40 and 15 meters CW. QSL via homecall.

3V8, TUNISIA. The "DX News Sheet" reports that Vlad, UA2FF, and other operators will be active in the CQ 160 Meter SSB Contest from the 3V8BB station.

4U1ITU, ITU HQ. Look for Don/K2KQ, Tom/K1TW and Piero/IK2BHX to activate 4U1ITU in the ARRL DX SSB contest as a Multi-2 entry.

5T, MAURITANIA. The International Amateur Radio Volunteers (IARV) will go to Mauritania to establish an emergency radio communication system in North Mauritania area. This time Tada, JA1CPS, is the leader and will head up a team of 5 operators. Yoshi, JA1UT, is NOT going to Mauritania this time due to the Palestine operation. The IARV will stay in Mauritania from March 11-17th. Activity will be on 80-10 meters, including the WARC bands on CW/SSB/RTTY mode. They have not specified which frequencies they will operate but will seek popular DX frequencies. They will operate during their spare time. QSL via JA1UT.

CE0, EASTER ISLAND. Roberto "Bob", CE3CDV, reports a group of 10 friends will depart on February 27th to activate Easter Island as CE0AA. They will be active until March 20th. Activity will be on CW/SSB on 160-6 meters. The QSL Manager is Sergio Del Gaudio, CE3WDH, P.O.Box 240-3, Santiago, CHILE. QSLs via Bureau are also OK.

CORRECTION TO OPDX.396. Under "HC8, GALAPAGOS", we mentioned that N5KO's name was Bob. This is incorrect. His name is Trey. Also, the LINK to the V26B site in the bulletin had a capital "B" in the URL and hence it would not work. The address should have been:
http://www.frc-contest.org/v26b/index.htm

DXCC NEWS. If you are not a OPDX InterNet Subscriber, you missed a special bulletin that was sent out announcing that the DXCC Desk will be purging 9U contacts as far back as January 1, 1994, and after. The purging will take place before March. The DXCC Desk reasoning is: "The submission of forged documentation is a clear violation of DXCC Section 1, Basic Rule 7, and also Rule 12 (a). Bill Moore, NC1L, from the League, says. "The list includes the callsigns listed below and may or may not be limited to these: 9U/F5FHI, 9U/EA1FH, 9U5W, 9U5DX, 9U5T, 9U5CW and 9U5DX. Remember, only the contacts dated January 1, 1994, or after do not count. Some have credits before this and these would be OK. The station 4U9U is OK."

E4, PALESTINE. The excitement continues from this one even though the LIDS/KIDS and SPACE CADETS try to disrupt operations. REMEMBER, ignore them! Anyway, several stations have been active with more to be aired in the coming weeks. As reported in last week's bulletin and in the specially issued OPDX bulletin (to OPDX InterNet Subscribers) throughout the week E44A, E44B, E44C, E44D and E44DX are all licensed to operate. A message from Jim Smith, VK9NS, earlier in the week informed OPDX that he talked to Ali, E44A (JY4NE). Ali stated that there are four students at the local college being trained so that they, too, can be licensed in the near future. Jim states, "....this is good news and hopefully we can expect plenty of activity in months and years to come. For myself, the appearance of Palestine on the bands with that brand new ITU allocated prefix/callsign has been one of the most signifcant events my amateur radio life. Having worked in the Middle East and knowing a little of events it is special. We should wish Palestine and its radio amateurs every success as they join our hobby."
The E44DX team continues to be very active mainly on SSB, but they were active for a few days last week before the CW contest and will do some CW operations after the ARRL International DX CW Contest, starting at 0000z, Monday. Their focus will be on 7 MHz. The E44DX Palestine DXpedition team's absolute highlight, however, has been their meeting with Palestinian leader Yasser Arafat where Yasser Arafat expressed his support for ham radio, and he sent his regards to the worldwide amateur community. Your editor talked to Bernie, W3UR (Editor of "The Daily DX"), on 10 meters last Saturday and he informed me that at that time, the team has worked about 23000 QSOs. Their goal is over 35000 QSOs before their operation ends on Tuesday, February 23rd.
The International Amateur Radio Volunteers (IARV) team led by Yoshi, JA1UT, is Palestine right now. The team is has 7 members/operators to help establish another radio-telecommunications system in Palestine. The announcement indicated that Toshi/JA8RUZ and Hiro/JP1TRJ will concentrate on amateur radio operation 24 hours continuously with two radios. Activity will be on 80-10 meters including WARC band CW and SSB. There wil be NO RTTY this trip. Yoshi was spotted over the weekend as JA1UT/E4.

FW, WALLIS ISLANDS. Just a quick reminder that Cedric, HB9HFN, will be active from here February 23th through March 8th. His callsign will be FW5FN. Please refer to OPDX.390 for more details. Cedric states that he will try to post the log during his DXpedition every 3-4 days on his Web page at: http://www.qsl.net/hb9hfn/log/fw_search.html
QSL cards will be available via the bureau. You can fill in your request at: http://www.qsl.net/hb9hfn/log/fw_search.html#request
Or send direct with a SAE (Self addressed envelopes) and the necessary return postage.

GU, GUERNSEY. "The 59(9) DXReport" is reporting that Bill, G4YWY, will be active from here March 24-28th, as GU4YWY/M. Look for him to be active mainly on 17/15 meters and the IOTA frequencies. QSL homecall.

HK0, SAN ANDRES (Update). The Woodbridge Wireless (WWI) from Woodbridge, Virginia, is pleased to announce its 4th DXpedition which will coincide with the 1999 ARRL DX Phone Contest. The callsign, as of now, will be HK0/W4DC, but they trying to obtain a short contest call. They plan to operate from March 2-9th. During the contest, two transmitters will be on the air. Operations before and after the contest will emphasize RTTY, CW, and the WARC bands. All contest QSOs will be confirmed automatically with a photo QSL via the bureau. You can send a SASE to W4DC if you need one quicker, or for QSOs outside the contest. The "TEAM SAN ANDRES" members are W4DC, K5OF, AA3KX, WB4ZNH, WN4FVU (if you need a YL contact), N2PP, and WZ8P. For the latest news and log checking, check out their Home Page at: http://www.pwcweb.com/wwi/DXpedition

J6, ST. LUCIA. The St. Lucia Amateur Radio Club will celebrate the 20th anniversary of the independence of St. Lucia with an activity day on Monday, February 22nd. Look for J69SF on 10, 12, 15, 17 and 20 meters (SSB and CW) 1800-2200z. Activity will continue later if demand requires. The club will be sending a special certificate upon request. Help with the postage will be appreciated. Send certificate requests to: St. Lucia Radio Club, co/ Givan George J69AC, PO Box 1677, Castries, St. Lucia, West Indies.

KG4, GUANTANAMO BAY. The Florida Dxpedition Group will be active from here March 18-25th. Look for Bill/W4WX/KG4GC and William/N2WB/KG4WB to be active during the BARTG RTTY Contest (March 20-21st). Their contest callsign will be KG4WB. Also, look for them before and after the contest on all bands with special attention to 6 meters and RTTY. QSL via home callsign.

OON6TT ON THE ROAD AGAIN. Peter, ON6TT/5X1T, will be going to three countries (Ethiopia/Eritrea/Djibouti) in a 14 days emergency mission to assess needs and to bring in an intervention team to boost the UN World Food Programme's preparedness to deal with the conflict on the level of IT and communications. Peter states to not expect a large scale operation if he is able to receive licenses and to look for him during his evenings.

PJ8, ST. MAARTEN. Ron/ND5S, his wife Sue/KF5LG, Bil/W8EB and his wife Dorothy/W8DVC will once again be on this island. They will be there for three weeks between February 22nd through March 14th. The group will be

using the callsign of PJ8A for the ARRL DX Phone Contest and will use the prefix of PJ8/homecall for the rest of the time. They will be concentrating on 160 and 80 meters but have the capability to operate on 160-10 meters. The group's equipment includes: Icom 706, PK232 for RTTY, plus the Yaesu FT-900CAT, KamPlus for RTTY, Yaesu FL-2100Z amplifier, two R-7000 verticals and a 127 foot sloper for 160 and 80 meters. One vertical is located at the top of the 10 story building as well as the sloper. The other vertical will be installed on the three story balcony. This is their fifth year on the island. They will maintain a daily sked on 14200 kHz at 2030z with the gang back home in Michigan. So if someone wants to request a sked on the other bands, please feel free to stop by and make a schedule.

QSL INFO AND NEWS......
Mirek, VK3DXI, is currently back from his Z2/ZS trip and is now living in Singapore. He states that he was active as much as he could as Z2/VK3DXI, and ZS/VK3DXI considering it was stricly a business trip. Mirek will be doing the QSLs himself, and the best route is via his new QTH in Singapore (He is awaiting the return of his 9V1XE callsign): Mirek Rozbicki, 7 Seletar Terrace, Singapore 806908, Republic of Singapore. Bureau cards are via VK3DXI, however he also mentions his old addresses are still valid for VK2DXI, VK3DXI and 9V1XE.

Bill, K4CIA, is NOT QSL Manager for KV4FZ and has no logs or cards. This information was listed in DXNL after the 160 contest. Bill states that he used to help Stu, W2GHK, many years ago when he was Herb's manager, but that is history now.

Chen Ping, BA1HAM, is pleased to announce that NE9Z, Bill Rinker, as his QSL manager to handle all QSL cards for him (BA1HAM), except the domestic cards to/from China.

The following stations are QSL via N2AU: ZF2NT, NH7A, YC0LOW, RZ9WZ, ZP5XF, KL7Y, KH6X and W6XR. The ARRL DX Bulletin gave the wrong QSL information for the KH6X operation by K5NA. All QSOs as K5NA/KH6 are via K5NA.

Zoli, HA5PP, informs OPDX that 99% of the E30HA's QSLs went out last week. Now for the BAD NEWS. Zoli has been informed by the Hungarian Police that they found many stolen foreign letters which included a lot of E30HA request and QSLs in a postal worker's home. This means some will not receive QSL cards, and Zoli is very sorry about this situation which will cause many to re-QSL.

S7, SEYCHELLES. Erik/SM0AGD, with his XYL Eva and Thor/LA7XB, will be here for 2 weeks, March 1-14th. This is not a full-scale DXpedition, so look for S79AG and S79XB. QSL to operator's homecall. Erik mentions that there are some restrictions, 80 meters is not allowed at all and 40 meters only between 7050-7100 kHz. Look for them on CW above 7050 kHz.

SPECIAL EVENT. Once again the Eastern and Mountain District Radio Club (EMDRC) will be operating with the special event callsign VI3GP to celebrate the 1999 Australian Formula One Grand Prix. Operation will

take place on all HF bands 160-10 meters (SSB and CW) and locally on 2m. Various EMDRC operators will operate from their home QTHs, many of whom are regular DXers. The callsign will be operational from 0000z, March 4th, through 2359z, March 7th, except for the 2 hours during the actual GP (approx 0300-0500z March 7th). QSL to VK3ER via the bureau or direct to the CBA, PO Box 87, Mitcham, 3132, AUSTRALIA, with return postage and SAE. As usual, a special QSL card is being designed for this year's GP.

T4, CUBA. During the ARRL International DX SSB Contest, look for the "No-Name DX-Group" to be active again operating as T48RAC from Santiago. Activity will be on all bands. Operators will be VE3ESE, VE3SDN, CO8HF, CO8KL, CO8OT, CO8TW, CO8LY, CO8UZ, CO8VN, CO8DC, CO8AJ, CO8DD and CM8YK. There will be an on-line QSOs look up on the "KWARC" Web page at:
http://www.kwarc.org
Use the Cuban Flag as your guide. QSL via VE3ESE, Don Fisher, 48 Lucerne Dr., Kitchener, Ontario N2E 1B3. Send a SAE, and green stamp for QSL card or SASE in Canadian postage.

UA0, ASIATIC RUSSIA. Mike, UA0MF, informs OPDX that he is on daily during his evening on 160 meters (1830.5 kHz) calling USA at from 1200z to 1400z. He is in "Zone 19", and if somebody needs him for some awards, just send him a message for a sked via his E-mail address at: ua0mf@mail.primorye.ru His QSL Manager in the USA is W3HNK. Direct QSL cards can be sent to is address: Mike Filippov, P.O.Box 20, Vladivostok, 690021, Russia.

VK9L, LORD HOWE ISLAND. Ed, K8VIR, will be active again March 6-18th as VK9EHH. Look for his SSB activity on 14162, 14260 and 21300 kHz. QSL via W8WC.

VP5, TURKS & CAICOS ISLANDS. George/N2GA and Diane/K2DO will be active from the Providenciales, May 24th through June 1st. They will be active as a Multi-Single entry in the CQ WPX CW Contest on May 29th and 30th, as VP5GA. Before and after the contest they will be active as VP5/N2GA and VP5/K2DO. Please QSL to home calls and to N2GA for VP5GA.

XF4, REVILLAGIGEDO. A group from XE1 operators will activate Socoro Island (NA-030) belonging to the Archipelago of Revillagigedo, March 1-15th. Their callsign will be XF4MX. Activity will be on 160-10 meters, Satellites, RTTY, CW and SSB. THe XF4MX DXpedition is formed by the following Operators:
XE1FSK Danny, operator in digital modes and phone.
XE1FRF Fabo operator CW
XE1ITJ Louis Pilot Station and Spokesman
XE1MX Mark team manager and responsible for the operation,
QSL Manager, and phone operator
They will also be in the ARRL DX SSB Contest as a Multi-Single entry.

XT, BURKINA FASO. The "DX News Letter" reports that Michel/F5RLE and Joel/F5AOW, are active as XT2DM (on CW) and XT2OW (on SSB) now until March 1st. Look for them to be active on 12/17/30 meters. QSL via F5RLE.

XU7, KAMPUCHEA (Cambodia). OPDX has been informed by Chung, HL2KAT, that Mr. Song Hyung Sub, HL2AQN, will be active here as XU7AAC from March

11-15th. He will leave Seoul, Korea, March 10th at 0000z to fly to
BangKok and from here to Pnompenh. He will depart from Pnompenh on
March 17th. Activity will be on 40/15/10 meters CW/SSB. QSL via HL2AQN:
Song Hyung Sub, Buwon Apt. 9-101, 340, Wonjeong-dong, Bucheon, Kyunggi-do,
421-200 Korea. Chung states that a relative Website can be found at:
http://www.qsl.net/hl2kat
Also, Song's E-mail address is: hl2aqn@sbsmail.net

Having been Radio Officer at sea for the past 20 years or so I am saddened by the eventual cessation of cw at sea and the full introduction of GMDSS. The final nail in the coffin for the fully ticketed Radio Officer.

Enough with this. This thread should be in another NG. It has nothing to do with radio.amateur.DX or radio.amateur.POLICY!

To be fair, life also depends on how often you cycle the pack. If you only
turn on your radio once a month, neither NiCd nor NiMH packs are likely
to get anywhere near their rated number of cycles before dying of old
age or other maladies.

For such a user, the longer cycle life of NiCds may not matter at all,
and the extra capacity of NiMH may be well worth the extra cost.
In addition, the lower weight is worth something in a handheld radio.

Don't know Jeff, mine has never seemed to exhibit any radiation pattern other than what I would get with a regular dipole, all this is based purely on operating experience as I have no special knowledge of antennas. I never really understood the multi-element dipole when I first looked at it thinking that an antenna tuner would be required but in fact it's required at all. I have heard that you can get up to 5 bands before you start getting element interaction. The 1/2" PVC for separators looks "OK" but I found some fiberglass rod that should make for a much more cosmetically appealing antenna. I'm already on my sub-divisions black list I'm sure.

I found my multi-element antenna to have pretty much the same SWR as a mono band dipole.

I was making copies of my ham ticket and noticed the dates on the license have only the last two digits...no century. A quick check of the FCC database on the net shows the same thing... Does this mean that everyone's license will be expired in 2010 sometime? Will people whose last license update occured prior to 1998 have their callsign automatically returned to the available callsign pool? Just a thought...

My .002 Euro here :*)

Use an old pc (486 or so) to grab images with a
b/w Quickcam that connects to the parallel port;
IIRC, on the net there are free programs/sources/drivers
to do that job under Linux (free itself too).
Then there are two solutions:

1- Write a dumb program that grabs images at a reasonable
rate (eg: one each 5 seconds), saves them on the hard
disk, keeping the last 24 hour ones.
Simple, but you'll need a big hard disk.

2- Write a smart program that grabs images faster, compares
them (eg: if image221.xyz != image220.xyz, then the camera
is seeing something) then saves only the ones that
differ, and delete the others.
By image "different" from another I mean dark/light
differences, you won't need image recognition for
that purpose.
Just make sure there are no cats/dogs in the room!:)

In that way you could also make the computer dial at
your (or police's) phone number with a prerecorded
voice that warns about the theft in act.
No alarm would scream, so the thief could be catched.

PS. By removing the IR filter, those cameras become
sensitive to the infrared too. Some IR "lamps" could
make the whole thing work also in a dark environment.

What sounds to you like a dozen-dozen stations QRMing each other is really an established method of communication. "Pile ups" are understandable only to those who participate in them frequently. On the maritime bands we had a world-wide pile up every six hours - hundreds of ship-board operators at sea, wanting to pass time-sensitive weather observations (WX OBS), camped out on the calling frequencies, all calling their favorite shore station similtaneously. The shore operator picked out the stronger ships and passed out numbers ("3JKG UR NR 1, KNLF UR NR 2, JYLS UR NR 3,...") until he had about 20 or 30 ships lined up; then he QSYed to their respective working frequencies and took their OBS. After finishing with that group, he'd turn on the CQ tape and the calling frequencies would come alive again, and he'd line up another group of ships. Twenty minutes into that OBS hour the calling frequencies would be calm again until the next OBS period, six hours later, approached. This went on four times per day, every day, for over half a century. (Only by getting WX OBS from every ship at sea was WMO able to provide accurate forcasts for those ships - that was incentive enough for each ship at sea to take and pass their OBS.) This is no different than what happens on the ham bands - the DX station will pick out one station at a time from the pile up then go on to the next station. As with many of our other procedures, hams copied this technique from the maritime folks.

73, Jeff WH6U (who copied WX OBS for four years at Coast Guard Radio Honolulu: NMO)

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard!
.....

>From the Editor's Desk:

This past week we have lost two very special members of the Amateur Radio community: King Hussein JY1, King of Jordan, and J. A. "DOC" Gmelin , W6ZRJ. They will be missed. This edition of the Newsletter is dedicated to their memory.

I'll be in Long Beach this week, teaching at the National Emergency Number Association conference. If you're in the area of the conference, held at the Long Beach Hyatt hotel, stop by and say hello.Next week, we'll go back to our regular-sized edition.

Stay safe, everybody -- see you next week! Dave Larton, Editor
.....

Please Welcome:

Robert Cupp / KC0DGF <RJCUPP@MSN.COM>
COLORADO SPRINGS, CO

I am the Training Coordinator for the El Paso County RACES under the El Paso County Sheriffs Office of Emergency Managment. As a volunteer I am enthusiastic to contribute.

Todd KD6UOI <kd6uoi@home.com> Laguna Niguel, CA

Jeff Brown - K6RF<Jeff_Brown@dot.ca.gov> San Diego, CA

Robert Mason Glendale, Arizona

I am a 911/Police Dispatcher for the Maricopa County Sheriff's Office, based in Phoenix, AZ. We cover an vast area of territory, approximatley 10,000 square miles. We have several contract cities and several unincorporated towns under our jurisdiction. We dispatch police services only, but we are the primary PSAP for our area for Fire/EMS services.

Skip Russell <datsr3034@hotmail.com> Modesto, CA

This is a great source of information on our state. I look forward every week to receive my copy of the newsletter. Keep up the good work. Skip Russell, member of Stanislaus County Red Cross Disaster Action Team, Communications Division.
.....

Current Events:

J. A. "DOC" GMELIN, W6ZRJ, SK

Former ARRL Pacific Division Director Jean A. "Doc" Gmelin, W6ZRJ, of Los Osos, California, died February11, 1999. He was 71 and reportedly had suffered a recent stroke. An ARRL Honorary Vice President, Gmelin, was Pacific Division Director from 1968 until 1978. He also had served as an assistant Pacific Division director, as Santa Clara Valley Section Communications Manager, and as an Assistant Section Manager for public service and external relations in Santa Barbara.

First licensed in 1947, Doc Gmelin was a Life Member of the ARRL and a member of QCWA. He also was a member and past officer of several California clubs. He was a member of the A1 Operators Club and had been active in RACES. He contributed feature articles to QST and was a columnist for Worldradio magazine.

Pacific Director Brad Wyatt, K6WR, reports that a combined Amateur Radio and Masonic memorial service was held Sunday, February 14, 2 PM PST, at the Los Gatos Memorial Cemetery, Los Gatos-Almaden Road, Los Gatos, California.

Gmelin's wife, Caroline, K6BGM, is among his survivors.

HAMS HELP STAFF COLOMBIAN RELIEF CALL CENTER

Amateur Radio operators are helping to staff a Miami telephone call center for those seeking to get in touch with family and friends in the earthquake-stricken region of Colombia. A quake measuring 6.0 on the Richter scale struck January 25 in

west-central Colombia's mountainous coffee-growing region. The quake killed upwards of 1000 people, injured thousands of others, and wreaked extensive damage.

Many of those staffing the call center are affiliated with the Sociedad Internacional de Radio Aficionados (Society of International Radio Amateurs). SIRA also helped mobilize Amateur Radio assistance in the wake of Hurricane Mitch, which devastated parts of Central America.

David Rosen, K2GM, of the Radio Readiness Group says continued spotty telephone service to the region has kept the call center busy since it started up February 2. Much of the traffic is directed to the city of Armenia, in the state of Quindio. Rosen said the center resulted from an AT&T request to the Radio Readiness Group and SIRA for help in furnishing information about the affected region to callers unable to get through by telephone.

Rosen credits SIRA President Rafael Estevez, WA4ZZG, with the idea of setting up a single location to receive incoming calls. With the assistance of AT&T, BellSouth of Florida, and the Florida Public Service Commission, twelve incoming lines were set up to the Colombian Information Center, available by calling 305-805-5550. Callers on AT&T who can't get through to the affected region in Colombia automatically get a recorded message referring them to the Colombian Information Center number.

SIRA volunteers are being assisted by members of the Kiwanis Club of Colombia, students from the University of Miami, the Colombia Disaster Fund, and the Radio Readiness Group.

Rosen said the center is getting dozens of calls seeking information about family and friends in the stricken communities. Call center volunteers then seek to obtain the requested information using Amateur Radio, the Internet, and other resources, and pass it back to the callers. "We are trying to enlist contact with as many hams in the affected area as possible," Rosen said.

Rosen said Amateur Radio continues to play a role in earthquake relief activities. Disaster-related traffic relayed on 20 and 40 meters has involved many stations in Colombia and the US. Rosen says he has received approval from the FCC on behalf of the US stations involved in the relief effort to operate SSB on frequencies between 7.050 and 7.100 MHz to maintain direct contact with emergency nets operating in that part of the band. "Having the ability to communicate directly with the Colombian nets on their own frequencies is much more efficient than working the HK stations crossband," he said.

Those wishing to assist with the Colombian Information Center are invited to call the Center at 305-805-5550. For more information, contact SIRA, at sira@iscnet.net or Dave Rosen, k2gm@contesting.com.

This week's EMCOMM Bulletin:

EMC171 Adult Coping w/Disaster
To: Emergency Communications Units - Information Bulletin
To: Emergency Management Agencies via Internet and Radio
By: Auxiliary Communications Service (ACS) of the
California Governor's Office of Emergency Services

EMC171 ADULT COPING WITH DIASTER Release 2/15/99

Hopefully you will never experience a major disaster _to_ your family or home, but if you do, or know someone who has, it can help to know the following from a back issue of the Huntington Beach, CA CERT (Community Emergency Response Team) Newsletter:

" Having just experienced the shock and pain of a disaster, you will be very busy for the next few days or weeks. Caring for your immediate needs, perhaps finding a new place to stay, planning for clean-up and repairs, and filing claim forms may occupy the majority of your time. As the immediate shock wears off, you will start to rebuild and put your life back together.

There are some normal reactions we may all experience as a result of a disaster. Generally, these feelings don't last long, but it is common to feel let down and resentful many months after the event. Some feelings or responses may not appear until weeks or even months after the disaster. Some common responses are:

- Irritability/Anger
- Sadness
- Fatigue
- Headaches or nausea
- Loss of appetite
- Hyperactivity
- Inability to sleep
- Lack of concentration
- Nightmares
- Increase in alcohol or drug consumption

Many victims of disaster will have at least one of these responses. Acknowledging your feelings and stress is the first step in feeling better. Other helpful things to do include:

- Talk about your disaster experiences. Sharing your feelings rather than holding them in will help you feel better.
- Take time off from cares, worries and home repairs. Take time for recreation, relaxation or a favorite hobby. Getting away from home for a day or a few hours with close friends can help.
- Pay attention to your health, to good diet and adequate sleep. Relaxation exercises may help if you have difficulty sleeping.
- Prepare for possible future emergencies to lessen feelings of helplessness and bring peace of mind.
- Rebuild personal relationships in addition to repairing other aspects of your life. Couples should make time to be alone together, both to talk and to have fun.

If stress, anxiety, depression, or physical problems continue, you may wish to contact the post-disaster services provided by the local mental health center.

Reread this periodically over the next few weeks and months. Being aware of your feelings and sharing them with others is an important part of recovery and feeling normal again soon.

To subscribe to bulletins, use the Subscription Services web page at <http://acs.oes.ca.gov/subscribe.html>. If you don't have web access, just send an e-mail message to <mailto:emcomm-bulletin-sub@harthaven.com>.

- For training assistance contact the ACS Training Officer at the web site or send an email to larton@garlic.com
- Submit suggestions, topics or comments on the bulletins to cary.mangum@macnexus.org or cary_mangum@oes.ca.gov

Bulletins are on the ACS Web page: http://acs.oes.ca.gov -and a Landline BBS: 916-262-0856 (graphical & standard interface); and a FTP Archive: ftp.ucsd.edu/hamradio/packet/tcpip/incoming for some bulletins. For earlier ones: ftp.ucsd.edu/hamradio/races
.....

Please let others in the emergency services field know of the newsletter, and encourage them to join... If you have opinions, suggestions or written material that you'd like to share with the group, let us know. We're always looking for new ideas and suggestions that will benefit everyone.

See you next week!

I heard someone on 3950 tonight who had talked to Walter via telephone this past week. They said Walter realizes he did wrong and is taking his punishment well. Yeah, right.

My guess is that he will get plastered and be back on the air real soon. Maybe the FCC will then revoke his license and confiscate his station. Till then, good job, Mr. Hollingsworth. Keep up the great work.

Where is that big ol' DX394MAN

>Meeting a (possibly former) terrorist leader, responsible for approving

You are aware of the fact that just about everyone who has been involved in the peace negotiations, excepting 'bibi' Netenyahu and a few Israelis his of age, are former terrorists both on the Palestinian side and the Israeli side. The Palestinian side is obvious, mostly ex PLO/Fatah terrorists. The Israeli side is also obvious, ex Irgun types and the like. Rabin was a terrorist in his youth and he and arafat could manage to get along... So what the hell is your problem ? Most of the Right Wing Likud old guard had terrorist pasts. Most of your early Israeli leadership had such pasts, its the younger generations like Netenyahu who do no(in a sense).

As for "possibly former" it is obvious to everyone who has half a clue that Arafat is no longer a terrorist, though both he, Netenyahu, and most of the other concerned parties are not above manipulating other terrorist groups to move events in their favor. Its a vast chess game and you should try to understand it before commenting crassly on it.

It is helpful to have at least half a clue before posting on such matters.

Cheers.

Hmmm...interesting question.

Should any manufacturer ship a radio with a battery that only has an expected battery life of about 1/3 the life of NiCads?

Because properly-treated NiMH packs only last about 1/3 to 1/2 the discharge/charge cycles as to properly maintained NiCds....

:Just curious.

Hello Bill...

I found this on the ARRL site. I believe this is up to date.

_____

ï¿½97.119 Station identification.

<snip>

b) The call sign must be transmitted with an emission
authorized for the transmitting channel in one of the
following ways:

<snip>

2) By a phone emission in the English language.
Use of a standard phonetic alphabet as an aid
for correct station identification is encouraged;

3) By a RTTY emission using a specified digital code
when all or part of the communications are
transmitted by a RTTY or data emission;

_____

Section 2 says to use English only.

Section 3 says when you're using a data emission you must identify with
RTTY. So this implies when using PSK31 the identification must be with
FSK???

Kamal S.

At exactly what point did I say that the Israelis were not an equally terroristic group in their day, with one distinction. Acts of terrorism committed by the Israelis were against the British army stationed in Palestine until the withdrawl before the War of Indepdence, and a few attacks on Palestinians before Iraq, the Arab Legion, et al. proceeded to try an open war on behalf of their Palestinian brothers (so they claimed). These Israeli attacks can be chalked up to what we call WAR.

The Palestinians and later, the PLO, despite lip-service to the Koran, proceeded to attack anything they could, including British police stations, despite the long history of British aid to Arabs and a stance which was against the Declaration of Statehood in 1947. The PLO puppet mastered OPEC, they hijacked planes, called for the elimination of Israel (they learned that from their Nazi allies) killed athletes, and blew U.S. civilians out of the sky.

So don't cry us a river by saying the Israelis were terrorists. That view, while true from the standpoint of their jockeying for position immediately before the U.K. withdrawl, is tainted by your perspective.

Furthermore, after 1948, former Israeli freedom fighters went on to end up military officers, such as Rabin, responsible for the Air Force's development and procurement, Moshe Dayan and the rest of the "names". Despite the assurances of representation in the Knesset from day one, the Arabs chose to disbelieve, ran for Jordan and gave us 50 years of how abused they were and retaliation for it.

Looks like I'm clueless indeed.

The NiMH packs that I have had experience with in other applications lasted considerably longer than Nicads. Plus they have no memory problem. NiMH are far better than nicads.

Burt Fisher commented to one of his (his only one) friends about the contest at the local gas station. It seems if you got five dollars or more of gas and guessed the correct number between one and ten you got free sex.

Burt's friend agreed to go with him to the gas station, Burt pulled in and got five dollars worth of gas , he then paid the attendant and the attendant told Burt to guess a number between one and ten , "Five" said Burt, "Nope" said the attendant , "but you were close it was six."

Burt and his friend left and drove around for a while , then they returned and Burt bought another five dollars worth of gas , the attendant told Burt to "guess again" and Burt said "Seven" , "nope" said the attendant "but you were close again , it was eight."

Burt's friend began arguing that the "contest" was rigged that no one ever got free sex for guessing the correct number , Burt said "I know for SURE it's not rigged, my wife won twice last week."

I could see unlighted towers, as they can hurt when hit by a fast moving
aircraft, but broadcasters? They would be the last I'd be worried about.
They have to gear to check themselves for proper operation. They may
overmodulate at times ,but I doubt they would be a threat to other
spectrums.

Prove they don't. Your taco world scenerio could entail anything. I'm
fairly confident that they had a god awful nasty signal spewing out to
attract the fcc in the first place. Obviously the fcc cared quite a bit
to make REPEAT visits. They tend to become a regular fixture when
someone ignores their order to shut off a nasty xmtr.

Yep, if they are smart they do. When making a raid, they have no idea
what they have in store for them. Someone could pull a gun and start
blasting. I don't believe the fcc carries firearms. I'm not sure, but I
doubt it. They have a federal marshall along to make sure all goes well.
The marshall will have a big pistol and is trained to use it. The fcc
training in firearms is nil, and thats out of their area anyway. If I
was a fcc field engineer on a raid, I'd have the biggest ugliest federal
marshalls I could find. MK--

I think kinda goes with the territory. But, then again, you have to
define what is a old ham. A ham that has been a ham for a long time but
not neccesarily old, or a ham that is old but not neccesarily a long
time ham, or a old ham that has been a ham since the titanic was afloat.
I talk to quite a few of those. Usually on cw of course. MK

:Nope. Remember PSK31 operates in USB and when a single tone
:is transmitted the result is a single ferequency output
:offset from the carrier frequency by the frequency of the
:tone. Which is exactly how almost all SSB transmitters are
:configured to send CW.

On second thought, The ARRL Handbook says that Single-Sideband Suppressed Carrier Tone-Modulated Morse is not classified as A1A but it's J2A that also comes under CW so it's ok. My question is what is PSK31 under normal transmission of BPSK and QPSK? I think the BPSK is G1D but it could be G1B also. Is the QPSK the same (G1D or G1B) and which is the correct one?

I like this phrase yall posted:
I've learned all the code I'm going to at this point. Maybe when I can
retire with Social Security in 2027, I'll have time to learn it for fun.

So morse code vs testing. Sure testing should always continue, but a emphasis on
morse code in this day and age is not a pre-requisite for obtaining a legal Fcc radio
permit. I think the trade off should be more of test questions regarding good
operational station skills, rules and regulations. Items morse code, as a bairer,
cant accomplish. Never has;never will.

The weak link about will Ham radio turn into CB radio without morse code, well my
friend, I have listened to HF ham radio and those "licensed" things sound 10 times
worse than what I hear on 11meters nowdays. Weekends are sometimes the same on 2m,
etc with actual licensed radio amateurs doing worse than what you have heard on CB
radio.
ok, my 2 cents......Harris, Mr.Wizard, Pearland,Texas... 11m (the interceptor-ch11)
I maintain 4 repeaters in the Houston area and enjoy the privlage too.))

Hi,
Philips hat die Daten an Fluke verkauft, und die haben vieles an den
Schaltungsdienst Lange, Berlin (030) 723 813 weitergegeben. Viel
Glï¿½ck...
Meist hat man Pech, denn es scheint, daï¿½ die professionellen Instrumente
supported werden, aber nicht eben alle. Ich suche zum Beispiel fï¿½r mein
Philips-15-Mhz--Scope PM 3326 P Schaltunterlagen und bin da noch
nirgends fï¿½ndig geworden. Falls jemand was hoert, bitte Nachricht an
guenter.richter@hmi.de.
greets
geunter

>> To be fair, life also depends on how often you cycle the pack.

I carefully worded my post (that time...<grin>) to include "treated properly."
Properly treated NiCd packs will last a lot longer than properly treated NiMH
packs - when we talk about the life of the pack.

I am a big fan of NiMH packs, too - I use them daily. I also use Maha's MH
C-777a universal conditioner/charger with its heat sensing and correct
"treatment" of both NiCD and NiMH packs.

4436. One more week, Pork Butt, ARRL!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: Cannon-ball@webtv.net
Message-ID: <13424-36D19871-52@newsd-134.iap.bryant.webtv.net>
Source record: 149782

Just one more week left before the new "ANTI"-amateur radio campaign gets underway. The FCC can, of course, put a stop to this campaign by simply doing its duty and citing W2OTK for his MANY violations that he STILL commits daily. I can count at least one violation per hour by Mr. Whiten. And since he is on the radio eight to twelve hours every day, that adds up to about fifteen to twenty violations PER DAY! Why the FCC continues to ignore Mr. Whiten is beyond us. If 14.313 is the "cancer" of amateur radio, than Mr. Whiten is the malignant tumor!

This campaign will target the parents of young amateur radio operators, 14 years and younger, who may not be aware of the trash that is spewing forth on ham radio. A copy of Mr. Whiten's vulgarity and racial slurs will be sent to the parents, along with a warning letter to the parents about the increase in this type of obscene behavior on the ham bands.

I listened this morning as certain hams were praising the FCC and how the they've "cleaned up the bands". I see nothing of the kind. In fact, I see it getting worse since the FCC is now known to be handing out extremely light penalties. Just this past weekend, on 14.313, you could hear the "orgasm" tape being played over and over, along with carriers & malicious interference. And AF2Y even did a bit of BROADCASTING Sunday afternoon.

One more week, and counting!

4437. The four cancerous tumors...

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: Cannon-ball@webtv.net
Message-ID: <13426-36D199A5-18@newsd-134.iap.bryant.webtv.net>
Source record: 149783

I think the four cancerous tumors that need to be surgically removed
from amateur radio are:

W2OTK-Rich "Pork Butt" Whiten
KV4FZ-Herbie Baby
AF2Y-Dr. Hate
KT4TR-Bob "credit report" Youngblood

Get these four off the air....permanently....and you watch how quickly
amateur radio straightens up.

Body handling: Binary attachment payload not displayed: vcard.vcf

Mica capacitors are generally very durable and fairly stable in value. Old mica caps bear color coding in the form of dots. The colors have the same numerical significance as the black, brown, red, orange, yellow, green, blue, violet, grey, and white code used on resistors, BUT there are at least four different ways of arranging them on the body of old micas! I recommend an old (50's - 60's?) copy of the ARRL Handbook for reference, and I believe that I can copy a few pages for you. Newer micas bear numbers of the form "103" or "6R8" which mean 1000 and 6.8 picofarads respectively. If you really prove that one is bad, you can get a new-style one to replace it. I believe that Allied and Newark may still have them, but I am not sure. You might be able to replace a mica cap with a ceramic cap, but stability might be a problem (or not) depending on the application. Hope this helps!

4440. Need equivalent for S-7116A CMOS Tone generator

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: rsdeputy@aol.com
Message-ID: <19990222135918.06998.00001618@ng117.aol.com>
Source record: 149786

Hello, I am working on a VHF portable radio (ICOM 02AT) and I need to replace an IC on the tone board. This IC is described as "S-7116A TONE GENERATOR C-MOS LSI". It is a 14 pin DIP, Maximum supply voltage is 12v DC.

I have tried to cross-reference this part with my usual sources: ECG/NTE, Digi-Key and Mouser and have come up blank. I have not been able to get through to ICOM on the phone (busy signal, or eternal hold pattern) so I am throwing up this request to see if someone else can find a replacement. If you need further information about the IC (pinouts & functions) you may email me direct.

Thanks in advance for any help you can provide.

Need weekly skeds on 10m SSB or CW with USA
operators in late July and early August 1999.
Preferably with stations who have a 5 element beam or more
and/or low noise level on receive...
We will be operating QRP (7W, 3el quad, solar power) in
the remote mountains of Peru on a major caving expedition.
Occasional messages via email relay to families and possible medical or
safety traffic.

>
> On the air is a GREAT way to practise CW. The following is from my post *CW
> and RAGCHEWING* dated Jan. 28, 1999
> ==========
> I have always enjoyed *conversational CW*, and advise it to people who want to
> increase their CW speed. Put the paper and pencil away, kick back and shoot
> the breeze, with CW.

It's been the best way for me to increase my speed, due in very
large part to a new ham friend and elmer here in the Dallas area. Three
or four times a week we get together on 10 meters and shoot the breeze.
It was he that got me to abandon the paper copy and go to head copy,
which is *the* way to go.
The only problem now is figuring out how to take the paper copy
without losing track of what my ears tell me. Still working on that one.

> Another good way to increase your CW speed is the ARRL code practice. Slow
> code goes from 5 to 15 WPM, and fast code goes from 10 to 35 WPM. They
> transmit 3 times every evening on every ham band from 160m to 2m, except 12m
> and 6m. See the ARRL Web site for more info.

Once you get to the 18 wpm level, you can also use the Code
Bulletins for practice. The nice thing about the ARRL broadcasts is that
the code is clear and perfect, and easy to copy. The bad thing about the
ARRL broadcasts is the the code is clear and perfect, and almost nobody
gives you clear and perfect code. <shrug> Still very good stuff.

Ya, when there are SEVERAL progs to do exactly that in Windows...?
There's even one (atleast) like you mentioned (what genius.....) that only
records the images when something changes.. It can even tell the difference
between an object moving and the sun changing positions (to alter shadows).
You can find the progs at www.windows95.com (it'll redirect you to the
proper address, since they stopped using that one for obvious reasons)...

4447. Yaesu FT-50 x VX-5R x VX-7R

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: "Jose R. Camara" <camara@quantacorp.com>
Message-ID: <36D1BAD7.C877C2C@quantacorp.com>
Source record: 149793
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have one ft-50 and one vx-5r. In my opinion, neither is an obvious winner, and the next year's VX-7 will still not be the end of the update/upgrade game.

FT-50 Pluses:

1. DTMF decoder
2. Audio record/playback (nice way to report back how someone sounds, good for short memos)
3. Working CTSS. Not only the scan (which now seems to work in the vx-5r) but regular CTSS usage, the VX-5R has an intermitent bug that makes it take as much as 3 seconds to open, making CTSS unusable.
4. Defense - hold by the antenna, swing at attacker's face (specially with the BIG battery). Ha. Try that with the VX-5R! :-)

VX-5R Advantages:

1. Size. A great compromise for people wanting a LARGE speaker, HUGE display, COMFORTABLE keyboard and TINY radio. Display larger and better than ft-50, keyboard still OK for small fingers, only speaker is worse than ft-50, distorts at much lower volume than ft-50.

2. Battery. Li-ion (7.2V 1100mA) has longer life at 1/3 of the size of the original BIG FNB-41 for the ft-50 (rated 9.6V 600mA). FT-50 has more options, including MAHA NIMH but still half the capacity.

3. 220+ memories

VX-7R killer features:

1. Full PC inteface (reads display, accepts commands, included tnc, runs scripts). I loved the feature in the PC software that continuously scans the band for activity, generating reports for most active frequencies (per time of day), etc. It was neat that YAESU this time decided to publish all the protocol. It was neat to finally see an IrDA interface. Bye, bye cables...

2. Real audio spectrum analyzer, you can even see the CTSS tones, tell deviation, tune to the very center, etc. It is also neat to see CTSS frequencies in a fraction of a second, not the old scan, try-one-at-a-time method.

3. 30 minutes of audio recording is now a real plus!

4. The lock code really discourages theft, at least to informed thieves. Without entering the code, only a trip back to the factory with return to the registered owner will make it work again. Virtually

unbreakable, thanks to serialized CPUS and encrypted coding in the
EEPROM. How come they didn't think of this before?

5. Finally an AC adapter with enough output to transmit. Thanks to
the switched 15V/2A brick.

6. The new telescopic antenna makes the radio even more portable, and
the graduated last section assures lowest swr for all 7 bands!

7. Price. WoW! How can they be making any money selling these for so
little? No wonder they are out of stock. I am thinking of cancelling
my order to wait for the wristwatch version. Does anyone know if it
will also have the optional GPS module?

Regards,
Jose

I only mentioned main, useful features for the ft-50 and vx-5r that I
thought could make a difference for people trying to decide on either
one. The VX-7R must be in a real serious backorder situation, as
another search to Altavista brought no links. Maybe the FCC objected
the built-in digital cellular descrambler jumpers...

Message-ID: <19990222155849.01140.00001596@ng-cc1.aol.com>
Source record: 149796

If anyone has the PL tones for the following frequencies, please email them to me. There are varies other users on these frequencies and it is hard to monitor w/o the PL's. All of these are from the Southern California area and can be heard in the San Fernando Valley area.

464.77500 Northridge Fashion Center- Mall Security
461.76250 Unknown Department Store- Loss Prevention
464.87500 Unknown Department Store- Loss Prevnetion
460.91250 Unknown Department Store- Loss Prevention
462.57500 Volunteer Arson Watch for Los Angeles Area

Also, if anyone has any Loss Prevention, Security Patrol, Disaster Communications, or other interesting frequencies that are within the 440MHz to 475MHz band, please email them to me. Please send only those that can be monitored from the Southern California area and those that are not listed in Police Call, METROSCAN, or ScanFan. Thank you and happy monitoring.

Mike Manahan (ReDoG31@aol.com)

4462. AT-600 Problems

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: Mike <globalcm@erols.com>
Message-ID: <36D20646.57608654@erols.com>
Source record: 149808
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi,
I have had problems with my ADI AT-600..
The FIRST one I had, had various annoyances
(i.e.: lamp getting dimmer on certain freqs.,
certain pl tones not decoded correctly,
certain pl tones not encoded correctly.)
I sent it back and instead of checking it,
and repairing it, they just sent me a new one...
I thought 'oh great, a NEW radio'
Only that the 'NEW' radio has at least one of
the same problems as the old one (pl encode)
(Specifically the 179.9 pl to access my local
repeater)
PS: I know TWO other people with AT-600's and
theirs WORK on that repeater.
So my question is "what to do?"
I don't want to send this one back to ADI
as well only to wait ANOTHER 6 weeks for the
turn-around. I also don't think I should have
to pay someone to check it out and maybe fix it.
Could I have it fixed and send the bill to ADI?
Would they pay it??
Or should I just send it back demanding a refund for
all the stress, and maybe look at a new HT?
(PS: I can't send it back to the people I bought
it from, it's too late for that)

Any comments would be greatly appreciated,
please reply direct as I do not frequent these newsgroups..

Thanks and 73!
N2OX

4463. Re: Yaesu FT-50 x VX-5R x VX-7R

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: "Dean, Greg" <N9NWO@GTE.net>
Message-ID: <7at5ii$5b5$1@news-2.news.gte.net>
Source record: 149809
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Jose R. Camara <camara@quantacorp.com> ...
:I have one ft-50 and one vx-5r. In my opinion, neither is an obvious
:winner, and the next year's VX-7 will still not be the end of the
:update/upgrade game.

I thought that the VX-5R was just now being released. I haven't
heard about the VX-7. How did you find out about that one?

What is ICOM doing to complete?

:
:FT-50 Pluses:
:
: 1. DTMF decoder
: 2. Audio record/playback (nice way to report back how someone sounds,
:good for short memos)
: 3. Working CTSS. Not only the scan (which now seems to work in the
:vx-5r) but regular CTSS usage, the VX-5R has an intermitent bug that
:makes it take as much as 3 seconds to open, making CTSS unusable.
: 4. Defense - hold by the antenna, swing at attacker's face (specially
:with the BIG battery). Ha. Try that with the VX-5R! :-)
:
:
:VX-5R Advantages:
:
: 1. Size. A great compromise for people wanting a LARGE speaker, HUGE
:display, COMFORTABLE keyboard and TINY radio. Display larger and
:better than ft-50, keyboard still OK for small fingers, only speaker
:is worse than ft-50, distorts at much lower volume than ft-50.
:
: 2. Battery. Li-ion (7.2V 1100mA) has longer life at 1/3 of the size
:of the original BIG FNB-41 for the ft-50 (rated 9.6V 600mA). FT-50 has
:more options, including MAHA NIMH but still half the capacity.
:
: 3. 220+ memories
:
:VX-7R killer features:
:
: 1. Full PC inteface (reads display, accepts commands, included tnc,
:runs scripts). I loved the feature in the PC software that
:continuously scans the band for activity, generating reports for most
:active frequencies (per time of day), etc. It was neat that YAESU this
:time decided to publish all the protocol. It was neat to finally see
:an IrDA interface. Bye, bye cables...

:
: 2. Real audio spectrum analyzer, you can even see the CTSS tones,
:tell deviation, tune to the very center, etc. It is also neat to see
:CTSS frequencies in a fraction of a second, not the old scan,
:try-one-at-a-time method.
:
: 3. 30 minutes of audio recording is now a real plus!
:
: 4. The lock code really discourages theft, at least to informed
:thieves. Without entering the code, only a trip back to the factory
:with return to the registered owner will make it work again. Virtually
:unbreakable, thanks to serialized CPUS and encrypted coding in the
:EEPROM. How come they didn't think of this before?
:
: 5. Finally an AC adapter with enough output to transmit. Thanks to
:the switched 15V/2A brick.
:
: 6. The new telescopic antenna makes the radio even more portable, and
:the graduated last section assures lowest swr for all 7 bands!
:
: 7. Price. WoW! How can they be making any money selling these for so
:little? No wonder they are out of stock. I am thinking of cancelling
:my order to wait for the wristwatch version. Does anyone know if it
:will also have the optional GPS module?
:
:
:Regards,
:Jose
:
:I only mentioned main, useful features for the ft-50 and vx-5r that I
:thought could make a difference for people trying to decide on either
:one. The VX-7R must be in a real serious backorder situation, as
:another search to Altavista brought no links. Maybe the FCC objected
:the built-in digital cellular descrambler jumpers...
:

Sorry if I wasn't more clear: OF COURSE a higher-amperage batter has more amperage.

I am talking about the LIFE OF THE BATTERY - the number of times we can expect it to be discharged and properly charged. THAT'S where modern NiCds have an edge over any other portable battery source for our needs.

>
>I have no intrinsic problem with microbroadcasting - I think that it has
>a lot to offer if set up correctly. ...

Just what *does* it have to offer? All that I can imagine is these fellows operating play stations and talking to themselves - no audience. Commuters, desiring a strong noiseless signal aren't going to tune into a 1 or 10 or 100 watt station during their morning and afternoon drive. (What's the sensitivity of a broadcast band receiver - on the order of 100 uV?) Will a home audience tune in? Doubtful. I've given up trying to listen to two 5-kilowatt stations (NPR located up on one of the highest ridges on the island, and the U.H. campus station, not more than 5 miles away).

Under the current CFR Part 15 rules, anyone can set up a station on the AM or FM band. Let the "microbroadcaster" abide by those regulations.

Besides, there's nothing about the DXCC program that inherently requires
unethical behavior. This is strictly the fault of those engaging in the
bad behavior.

Heck, we've got datamode operators (not many, mind you, but a handful is
enough to make my point..) clobbering CW QSOs. Is that the ARRL's fault
because they published articles on datamode operation & ads for data
controllers?

>Under the current CFR Part 15 rules, anyone can set up a station
>on the AM or FM band. Let the "microbroadcaster" abide by those
>regulations.

I have to agree with Jeffrey here. The FM broadcast band was NOT designed to accomodate thousands of low-power signals. Due to the FCC's adoption of Docket 80-90 in the mid-80s, the band has already absorbed many more stations than it can accomodate without interference. Co and first-adjacent channel distance requirements have been lessened. The result is an a substantial overall increase in interference between stations with saturation occuring in many of the more populated areas of the country. The addition of still more signals would result in bedlam and chaos. To see what the future of the FM broadcast service holds if this proposal is adopted, listen to the AM "graveyard" frequencies (1230, 1240, 1340, 1400, 1450, 1490) on any given evening. Is this what you want?

Nope. Remember PSK31 operates in USB and when a single tone
is transmitted the result is a single ferequency output
offset from the carrier frequency by the frequency of the
tone. Which is exactly how almost all SSB transmitters are
configured to send CW.

which is not

From my experience MT63 is not a poor performer.

There are some problems, especially latency and lock-up time, but once in action, MT63 is extremely robust and reasonably fast. I can work antipodean stations on 20m using MT63 just about every day if I wish, which is certainly not true (with the equipment I have) for the other modes I have tried.

Hi all,

I am not sure what the problem really is with no code ..... It takes time and effort to study for whatever grade of licence you have ..... I am not a ham operator but my husband is, and in Australia he has what they call a limited licence which allows him to operate on all but HF frequencies.

What about those people who can't for what ever reason use morse code .... does that really make them any less a ham operator????? If all that seperates CB'ers from ham operators is CW then why bother. It would seem to me that with all the computer generated morse programs there are on the market .....that a lot of people who proclaim to be died in the wool operators are not being honest with themselves.

Incedently I can't see any point in having a cow over this issue or swearing for that matter ......

Thanks for listening ..... regards Dawn

Careful, Brucie. Posting false accusations like this are a very good way to end up on the wrong end of a libel suit. Then again, it would be fruitless against somone like you since you likely have no assets of value.

Get an education, Brucie. Learn how to read and write at least at a third-grade level. Ignorant and illiterate is no way to go through life, son.

Do yall think just because you see a xx/xx/00 that its 1900 or
2100,2200,etc?
Quit being so stupid. But I bet we will see you on TV NewYears eve, holding a
candle at an end of the world party......dont worry about 2010, let your
license expire and take the tests over again, just for fun.....

Mr.Wizard- Pearland,Texas

4488. History tidbit: RST

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7aqvbc$li2@news.Hawaii.Edu>
Source record: 149967

Here's a history tidbit from RSGB's "World At Their Fingertips":

In October 1934, an American amateur, Arthur Braaten, W2BSR, of
Riverhead, Long Island, New York, introduced to the world of
Amateur Radio, through the pages of QST and the T And R Bulletin
what he described as a standard system of reporting signals.
Devised to overcome the difficulties of the old QSA-QRK system,
the Braaten Code was based on the three important characteristics
of every telegraphy signal -- Readability, Signal-strength, and
Tone. The RST Code as originally printed in the T And R Bulletin
remains unchanged today except that Braaten initially suggested the
Signal-strength scale should be limited to five catagories. He
agreed later, under pressure, to increase the number of categories to
nine. S1, S3, S5, S7, and S9 in the present scale have the same
meanings as S1, S2, S3, S4, and S5 in the original scale. S5,
"very strong signals" in the original scale has no exact counter-
part in the present scale, where S8 indicates "strong signals"
and S9 "extremely strong signals."

Arthur Braaten, besides being associated with the now universally
used RST code, will always be remembered in RSGB circles as the
donor of the most handsome trophy with is awarded annually to
the English (G) amateur who scores the highest number of points
in the ARRL DX Telegraphy Contest.

4489. History tidbit: QRRR

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-22 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7aqvo3$ln1@news.Hawaii.Edu>
Source record: 149968

How did QRRR originate?

--From "Fifty Years of A.R.R.L.":

It began in March, 1921, with Detroit Clubs choosing QRR to mean
"Quit the rag chewing." (Page 38)

The next mention of it is in September 1930, when a hurricane approaching
the Virgin Islands brought a QRR from K4AAN. (Page 71)

Then, on that same page, "...early efforts on the part of railroads to
organize amateurs, first under the Pennsylvania Railroad rallying call
"PRR," then the use of "QRR" to signify a railroad emergency, and later
the use of QRR to signify any emergency involving amateurs." (Page 71)

Finally, "In August 1948, QRRR replaced the traditional QRR as the amateur
distress call." (Page 114)

what is the source of your information?

re: windows NT as the radio's O/S...
that seems difficult to believe. neither WNT, linux nor bsd
are intelligent choices for a radio o/s. is that what you
are saying -- the radio runs WNT as its OS?

I have been informed (in a less than polite way) that I was too broad in my statement that I had listed my Henry 2KD5 in this or any other newsgroup and that I had been defrauded by somenon who was using the newsgroups. That was not my intention. My only intention was to warn all of you about this individual in case you might have the occasion to have dealings with him. I never expect to see a dime of my loss again so I had not hoped to gain in any way by my posting to the newsgroups.

So let me be perfectly clear -I DID NOT POST MY HENRY 2KD5 IN THIS OR ANY OTHER NEWSGROUP. I WAS NOT DEFRAUDED BY ANYONE THROUGH THESE NEWSGROUPS.

My ads were all at Internet trading sites and all of them have been informed of the situation, as well as this person's ISP and all law enforcement officials in the respective jurisdictions.

I have slit my wrist and let a small sampling of blood fall on my keyboard in pennance.

Regards,

Gary

Source record: 149812

I've listened to K1MAN for the 3rd time last night and took the opportunity to visit his website. I don't have a favorable opinion about this guy and his organization. I don't see nor hear anything professional about this guy and his organization. If he's broadcasting one-way he should stick to just amateur radio related bulletins. His editorials and taped on-air talk show discussions are not bulletins. Isn't this type of transmission a violation of Part 97?

He exhibits poor engineering practice as he can be heared many KC's away above and below his frequency of transmission. Many others complain about this too. What does he use for equipment? It must be junk or improperly tuned. Let's not forget his many minutes of dead air. Again, isn't this a violation of Part 97?

His audio production leaves something to be desired too.

K1MAN's or the AARA/IARN website is anything but professional looking. For someone (K1MAN) who professes to be such an expert on everything his website looks like it was done by a beginner using an early version html editor. You'd think an organization would have a more professional looking website.

Anyone agree or disagree? Just my 1 cent worth of opinion.

Some of the antenna ads keep shouting "NO TRAPS!!" Is the signal loss you mention the reason that the ads are so insistent about this? Or do traps physically deteriorate, change characteristics, etc.? I'm thinking of getting the Cushcraft R7000 but I'm going to be using pretty low power (an SG-2020), so I'm concerned about signal loss. But I'm also wondering if I should be getting something with traps if there's something BAD about them.

Well, the distinction between an xxB emission and an xxD emission is
pretty murky. That's why you'll find "RTTY and data" used together
pretty much throughout Part 97. Keyboard-to-keyboard communication is
generally considered an xxB emmission.

Dear Christopher,

>>>Some of the antenna ads keep shouting "NO TRAPS!!" Is the signal loss you mention the reason that the ads are so insistent about this? Or do traps physically deteriorate, change characteristics, etc.?<<<

Not to be a smart alec, but the answer is YES!~ =)

Any time you introduce any inductive load into an antenna that is not a quarter wavelength antenna you are going to have losses. AND the traps are man-made, and subject to the whims of mother nature and the manufacturing process, therefore likely to further introduce losses.

As I mention earlier, I do periodically take the antenna down for a good cleaning of the traps, removal of FOD (foreign object damage), and occasssionally re-wire the antenna.

As I said before, I have had the same set of Reyco traps for 80/40 meter operation for about 15 years or more, and they are like a Timex watch..."Take a lickin' and keep on tickin'!"

The commercial antenna you mentioned is highly rated by everyone that has critiqued it, so I think you can't go too far wrong with it. I myself would prefer halfwave dipoles cut for the band I was going to work on if I was limited to low power, but that's just me. If you mount the R7k properly and feed it with some respectable coax, you'll have a good antenna system.

Yea, But when the fcc gets after a BC station to fix something, I doubt they wait until repeat visits to do something about it for something serious. When a BC station is told they are jamming an airport, I bet they hop to it fairly quick as they know the fcc gets to be a royal pain about stuff like that. Also if a ILS freq was jammed they would just switch to a different runway or go NDB or whatever. No big deal. The taco scenerio sounded like someone who wanted to see how far they could stretch the fcc's patience. MK

Kenwood TS-930SAT with all of the Fox Tango filters.
2 500hz CW and 2.1khz SSB filters. It still has the
original crystal filters to allow very crisp audio.
This is done with the IRCI filter switch kit.
The radio was updated by Kenwood and had the super
alignment by IRCI. I also have the remote tuning knob that allows the
vfo to be controlled next to the keyboard. I have a shipping box, the
owner,
and service manuals.
Asking $1000 + shipping

Icom IC-765 with the stock filters. I have a SM-20
desk mike as well. I have the original box as well as the shipping box.
I have a home brew rs-232 control interface. It has been tested with
CT, NA, TR & LOGPLUS.
Asking $1200 + shipping

Reason for selling, want to upgrade to FT-1000

Is that really true? Publication of true statements can be construed as
libel? If so, then how does any newspaper survive? If so, the whole
legal system is in real trouble.

FOR IMMEDIATE RELEASE

February 23, 1999

CONTACT: Art Joly, N1RPN, Jim Kelly, KK3K (skeptic49@my-dejanews.com)

LAMBDA AMATEUR RADIO CLUB AGAIN CO-SPONSORS ARRL AWARD

==========

The Lambda Amateur Radio Club (LARC), a club for gay, lesbian, bisexual, and transgendered radio, electronics and computer enthusiasts and their friends, will once again co-sponsor the American Radio Relay League's (ARRL) "Professional Educator of the Year" award for 1999 as a part of the club's ongoing public service effort.

LARC President Art Joly, N1RPN, has informed the ARRL's Educational Program Coordinator, Jean Wolfgang, WB3IOS, that LARC will once again join with the League to co-sponsor the "Professional Educator of the Year" award. This marks the third year in a row that LARC has joined with the League in recognizing a fellow amateur who has made an outstanding contribution in the field of education. There are currently three nominees for the award. The winner of the award will receive a plaque, which will carry an inscription mentioning LARC as a co-sponsor with the League of the award.

The Lambda Amateur Radio Club (LARC)

LARC welcomes new members. There are no special requirements for membership other than an interest in radio, electronics or computers and a supportive attitude toward members of the sexual minority community. LARC publishes a monthly newsletter, sponsors local get-togethers at computerfests and hamfests, and organizes DXpeditions.

LARC is a public-service-oriented club which proudly affirms the sexual minority status of the majority of its members. LARC works publicly and visibly for the benefit of all amateurs by promoting fairness, acceptance, and good will in ham radio especially on behalf of members of the sexual minority community.

FOR LARC MEMBERSHIP INFORMATION, visit our web site:

http://www.geocites.com/WestHollywood/1686

LARC also sponsors a moderated public electronic listserv: larc@queernet.org

For information:

Send an E-Mail to: majordomo@queernet.org

Hello! Has anyone run these side-by-side? I'd be interested in hearing your comments regarding basic receiver performance in CW mode of the two.

I know the '830 is a load-n-dip radio, and the '751A isn't, so that isn't of concern to me. I'm most interested in basic receiver performance on CW; dynamic range, selectivity, and sensitivity comparisons.

Thanks!

Looking in the Ramsey catalog on p.11 on the crystal radio set it makes mention of "...experimentation with other detectors - even a pencil lead or old razor blade, similar to the "foxhole" radios of World War 2." Does anyone have any information as to how these radios were built, materials, &c. ?

Any reply greatly appreciated.

I noticed a quite amazing propagation around 4 days ago during 2 evenings,
on the 20 meters at around 21:00 GMT (the band is usually down before
20:00), with US stations coming with S9 (usually 4 to 7) on a 1/2 G5RV in
London (+FRG100), that's about all I noticed (+good openings on 10 meters
with some US FM repeaters coming S9).

Dear Friends.

I buyed one Hand Held transceiver, YAESU VX-1R in AES-Orlando USA.

My old VX-1R was operated in out of Ham Radio frequency. I opened this radio only sold the 1⁄2 jumps. My new VX-1R I maked the same but the radio don't not extended the transmission.

I asked the AES. They don't have the aswer!!!! I asked the YAESU USA and I don't haved aswer.

I my job a need the small radio and need this radio operated out of ham radio frequency. I ask everybody of this board if somebody knows what is the form to obtain this information,

Thank you very much

I need ADMS-1D or ADMS-1E to program my VX-1R. I have an older version of the software that I purchased a while ago. It was the first version and will not work with the VX-1R. I spoke with the company who makes it (not Yaesu) and they are willing to sell the upgrade to me.....for the same price I can purchase it new. That sucks. I already have the cable, I just need the version ADMS-1D or ADMS-1E.

Thanks,
Adam

Lambda ARC ~ Faggots with a purpose.

ARRL BOD bent over and got screwed by Lambda, and now the ARRL BOD tells the membership to bend over so we can get screwed too. The ARRL has gotten too damn liberal. With their restructuring proposal they want to make all radio enthusiasts one big happy family.

Well I won't associate with Faggots, CBer's, or sick-lame & lazy Morse Code haters. ARRL needs to get back to the core values that Hiram Percy Maxim, W1AW, stood for and quit catering to idiots and candy-ass cry babies.

- .-. -.-

4534. THERE IS NO VX-7R !!!

Dear Sir/Madam:

My usenet post about the FT-50, VX-5R and a fictitious VX-7R had the purpose of informing potential buyers about some key differences of the two radios, plus add some suggestions for new features to Yaesu, jokingly in the form of a fictitious VX-7R.

I apologize if it has caused any confusion or inquiries about it. I am posting a copy of this in the same lists I posted the original to revert any incorrect impression it may have caused.

I'd also like to congratulate YAESU on two excellent radios, and seriously offer the VX-7R features as suggestions for future models. The anti-theft code would be, for instance, very easy to implement in many current radios and provide great protection, specially for the smaller and smaller HT's.

Regards,
Jose R. Camara

It wasn't a court order, Jeff. They agreed to a state-backed arbitrator. The ARRL could have continued to fight it, but had the "excuse" they needed to give it the "We treally tried!" spin for the anti-LAMBDA League members.

Now they are "in bed" with LAMBDA, co-sponsoring awards.

50 MHz through a non-coaxial type relay will represent quite a
discontinuity in the feedline system. It could significantly raise
SWR. I suggest finding a coaxial relay designed to switch RF up to at
least 54 MHz.

I know your not uneducated Drew so you comments are a reflection of character I suppose. Your cute play on words from the Raid slogan is something I would expect to hear from someone in middle or high school so it's no surprize to see you repeat it here. You seem to pride yourself on your ability to quote cute one liners that most of us heard 10 years ago.
AIDS has also killed many heterosexual men, women and children. I wonder if you would think it was funny if someone you cared for died from it due to a blood transfusion or other non-sexual exposure. On second thought you'd probably make a joke of it.

I wanted to get the word out to all the sites about a thief by the name of Glen Verasso of
Newark, Ohio. He entered into a trade agreement with me when he saw my listing of
my Henry 2KD5 in one of the various ham sites, amngh whch this was one. He offered
to trade me an FT1000 (presumably an early one) for my Henry. This seemed like an
odd, but certaily reasonable trade so I went for it. I carefully packed up the Henry in 3
boxes ans sent it to him UPS, the same time he sent a package to me, again UPS. What I received today was a nicely wrapped box with three concrete blocks inside, total value
about $1.50.

Guys....
This is an example of an old usenet game called "trolling."
A "troll" is a post on a usenet group specifically designed to
upset people and get them posting long threads denoucing the troller.
It's not the same as a "wisecrack" reply or post that's on-topic;
The troller doesn't actually care about what he's posting.
The subject is irrelevent to him.
He will post shocking or outlandish junk just to get heated replies.
He gets his "bang" out of upsetting you.

These "trollers" absolutely LOVE the ham related newsgroups,
because so many people will publicly reply to them.
The proper response is to either ignore him or reply to him
in private email. Please don't copy the newsgroup.

Kind Regards,
Dave AB5S

Chris-

I have a kid's book circa 1953 entitled "All About Radio and Television" which has got a chapter entitled "how to build a foxhole radio". I used to read it back in '69/70 when I was a wee punk and it got me interested in radio.

You could probably put one together in about an hour with common materials. The toughest requirement is that you need high-impedance headphones. I remember trying to make the razor blade detector work and it's a pain....just get a germanium diode to start with as your detector.

Let me know if you want more details and I can either fax them or mail them to you in your SASE.

Isn't it interesting, though, that Yaesu took the time to send this to Jose R. Camara [author of the VX-7R]. I wonder if C. H. Margelli was bombarded with questions about the VX-7R, or if someone from Yeasu is reading the postings on this newsgroup.

Either way, I think we should give Yeasu some credit for staying in touch with reality...or at least for setting Mr. Camara straight.

...as for you Mr. Camara...that sure was an amazing stunt. I found myself engrossed in the amazing new features you described, knowing full well that some were simply too far out to be true. But I'm sure that some of us simply wanted to believe, even for just a moment, that there might me a radio out there soon that may have some of these features. And if a radio like this really did see the light of day, I'm sure all the features
probably wouldn't even work properly on the first batch of production models from the factory (whether from Yaesu of some another manufacturer).

>Ya, when there are SEVERAL progs to do exactly that in Windows...?

Hmm, I supposed he wanted to make the whole thing himself,
and also I didn't check if there are such progs under
Linux (BSD, etc.) too.

Anyway, besides reliability and overall quality reasons
(don't want to start a stupid OS war), I would choose
Linux *for that purpose* because Linux is free and
well documented.
Windows is not free, wants more resources (cpu, ram, etc.),
you cannot operate it remotely without buying expensive
software, so you'll need a video card and a monitor too.
And, if you plan to write the software yourself you'll
also need documentation and a development system.
Windows lack both natively, Linux have both free.
For example, in every Linux distribution there are also
docs on how to interface external electronic appliances to
I/O ports and how to connect unsupported UPSs.
The kernel is also customizable: one can cut away unneeded
things to fit it into small machines (8088/86-like embedded
processors too, search for "ELKS"). IMO it's worth a look.

And even realizing that Linux is the worst OS in the
world, you haven'wasted any money (ok, a couple of $
for the CD :*).

Not related to the original topic but, since you are an
Old Man, I bet you'll be interested to know that Linux
supports natively the AX-25 packet radio protocol.

73's

PS. I follow only s.e.misc, and occasionally s.e.repair
(among the originally crossposted groups).
Feel free to remove the ones we don't read both, to
limit the noise.

You can still recieve the blocked frequency range
albeit on the image frequency. My FT50RD will
recieve cellphone at around 980 Mhz.

Good grief, the sky is falling, the sky is falling!
The world spun quite well without computers. It will continue to spin
quite well after the clock clicks to 2000. Any fool that has Y2K
problems at that time will have asked for it. Heck, even this junky old
box I'm using now will handle the year 2000. Tell me, What is going to
take lives when the clock flips to 2000? Dunno, I'll sure be glad when
the clock flips myself, so I can laugh at all the doomsayers. MK

I'm sure they wouldn't be overly thrilled, but outage of ILS systems is
quite common at airports. They go out by themselves quite a bit. A pilot
that depends only on an ILS system to get on the ground may be in
trouble. Of course they will find out all this when they get their
airport info before landing. MK

A report on the Year 2000 computer problem prepared by a special Senate panel warns that Y2K is "one of the most serious and potentially devastating events this nation has ever encountered," the WASHINGTON POST reported on Wednesday.

A draft copy of the Senate report, to be released later this week, was leaked to the POST.

The report represents the most comprehensive assessment of the Y2K problem.

An opportunity to institute arbitary rule and do away with the representative republic ?

The chief and mastah of the airwaves is no one but Phil. N9GOR. He will be among the first to test the new OTK Hollingsworth Filter. It is alleged to filter out moronics. Just yesterday an 11 meter experiment occured at Buds Truckstop near Indianapolis. The Filter was utilized and no lot lizards, smokey reports,or nois makers. Well, GOR will soon reoport on the great field test from up near Chi town.It is expected that when the device is activated no moronics,stump jumpers,barfies,queenies,lids,qids or geeks will be heard.

Dont believe it when you hear the bands are not clearing up.The geeks aren't quiet because so many of them are injured trying to jump stumps whith walkers, canes, and wheel chairs while drunk.

The expression "Dipping" means tuning for minimum, the expression "peaking" means tuning for maximum. In the case of "Dip the plate", tune the plate tune control for minimum Plate Current
Ip. Enjoy the 830 -- in my books its one of the best rigs ever built.

There is none. One is pure noise or hiss reduction. The sinad has an audio tone on the signal generator and distortion on the signal.

Nope ... SINAD is (S+N+D)/(N+D) where

S=signal
N-noise
D=Distortion

It's a much better measurement of FM receiver sensitivity than
a quieting measurement. You can tune a receiver for best
quieting sensitivity and have terrible distortion ... you virtually
can't goi wrong with a SINAD meter by thing for best SINAD
sensitivity ... at about the 12 dB point, where the measurement
tends to be the most sensitive.

Ok, Drew are you interested in discussing the topic or are we going to default to the one liners that have no meaning, no point, and add nothing to the discussion. What do you think the ARRL should do in this situation? They can not by law deny Lambda or any other ham radio organization membership to the ARRL based on race, religion or gender. So what exactly do you mean by "develop a backbone"?

Tim, your ignorance about the illegal attack on the Mount Carmel Church, if not pretended, is astounding.

Probably the best way for you to become familiar with the facts would be to rent a copy of _Waco: The Rules of Engagement_, the award-winning and quite objective film on the subject. The inventor of forward-looking infrared himself provides a live analysis of what the surveillance cameras were revealing, and the truth is quite different from what you have been told by the professional liars.

The Branch Davidians were, in my view, adherents of a somewhat nutty religion, but they had been peaceful residents of their community for _sixty years_ and the idea that they posed a threat is patently absurd. Most of the guns, et cetera they owned were used to make money at gun shows, which aren't too different from hamfests.

Even the items that the illegal raiders were supposedly looking for (which were never found, by the way), namely machine guns, were perfectly legal to own as long as one purchases a permit for a couple hundred bucks. So this preacher and his handful of followers and their kids, who had never harmed anyone, had to be attacked by the equivalent of military force over a _permit_ violation?

That's insane.

The jamming mentioned by Mr. Zimmerlee is just another example, of thousands that could be cited, of a government now breaking its own laws with impunity and abandon.

With all good wishes,

Kevin, WB4AIO.

pilots still can fly the planes just fine.

the radios and navaids don't know about dates.

even the stuff that knows about dates can be countermanded to run anyway
(such as databases that "expire" but are OK if the data it contains is still
up to date for your operation...)

The ARRL was forced by court order to accept advertisment by the Lamda
group. This does not mean they liked it.

I agree the ARRL needs to get their head out of their collective rears and
wake up and smell the roses. But this is nothing new. Instead of sitting
around and bitching, might I suggest we ALL join it, then throw the bum's
out that you don't like.

They (ARRL) long ago lost sight of the original idea's of HPM. And BTW
what does " T R K " mean?

HETEROSEXUAL RADIO OPERATOR'S SOCIETY

==========

The Heterosexual Radio Operator's Society (HEROS)

HEROS welcomes straight members. There are no special requirements for membership, other than that your reproductive organs are used as nature intended. You must have an interest in radio, electronics or computers We have a supportive attitude toward members of the sexual majority community that crticism of deviant, non-compliant minorities is as positive thing. HEROS publishes a monthly newsletter, sponsors local get-togethers at computerfests and hamfests, and organizes DXpeditions.

HEROS is a public-service-oriented club which proudly affirms the sexual majority status of the majority of its members. HEROS works publicly and visibly for the benefit of all amateurs by promoting safe sex, rejection of sodomy, and good will in ham radio especially on behalf of members of the sexual majority community.

FOR HEROS MEMBERSHIP INFORMATION, make sure you test negative for HIV, have your original sex organs, and that they have not met the Democratic definition of sex.

> about stuff like that.

You are putting it mildly. The FCC will show up on their doorstep (literally) and force the station to cease transmitting (which the operator on duty or in control must technically be able to do at once). If for some reason that does not happen, the FCC will get the electric company to shut off the power to the transmitter site, or whatever it takes to stop the interference which threatens safety, navigation, etc. They do not kid around with this stuff, or wait for repeated visits & warnings for serious violations of this sort (obviously we are not talking about minor violations like missing logs, no public file, skipped an ID or two, etc.).

> Also if a ILS freq was jammed they would just
> switch to a different runway or go NDB or whatever. No big deal.

I think you would have a hard time convincing an instrument rated pilot or airline captain of this point of view. :-)

Local fellow is between jobs and needs to raise cash. Radio was used for a while in CB, but is in good working order. (Tested on 10 meters. Good power/modulation). Nobody has cut any wires inside.

Original mike included. Operates on AM, FM, USB, LSB, CW. This is one rugged radio. It also has a HOT receiver. Great for mobile or base use.

$200 or best offer.

First and foremost, thank you ever so much for not wanting to associate
with us. Saves us the hassle of having to think of a tactful way to get
rid of you...

Then, please keep 1AW out of this. The world loves and remembers him for
uniting hams, not for dividing them. He certainly wouldn't have been
pleased about your posting.

Well and, last but not least, welcome to the killfile.

4597. Hams I have had the displeasure of meeting

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-24 00:00:00 UTC
From: mf_luder@my-dejanews.com
Message-ID: <7avvdeols1@nnrp1.dejanews.com>
Source record: 149741
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Hams I have had the displeasure of meeting :

3 Homosexuals who had an unhealthy interest in young ham activities

2 Felons, one a pipe bomb builder

1 Deranged (former) FAA Air Traffic Controller who announces on 2 meters that he bathes in a sink because the shower has his mother's plants in it.

1 Convicted child molester who appeared as a normal old guy, until 7 years after I met him he was arrested for fondling an 8 year old girl and his multiple past convictions were publicized.

Add in that gay and lesbo recruiting drive that LAMBDA attaches to all its posts over the years. I wonder if that warning letter idea might not be a bad counterweight to the ARRL Prozac view of ham radio. It's not a hobby for minors, at least anymore, and none in my house. I'd much sooner encourage them to listen as MW/HF SWLs, OUTSIDE MOST ham bands.

Radio Defender, you can't win against the arrl, they don't care about honor,
and integrity anymore.

As for Lambda, some people will join anything for a free blow-job.

Horrible, isn't it? I think the only recourse is for you to get out of
ham radio altogether. Yes, that's it... just give up on that disgusting
thing called ham radio and move on to an activity where you can
associate with right-thinking people. Maybe something that involves
wearing bedsheets.

Ham radio won't be any the worse for your absence.

Consider this,

Could the A.R.R.L board of directors and staff be Lambda members to? That sure would explain alot of things.

Body handling: Binary attachment payload not displayed: vcard.vcf

I suggest that you make sure that the path length of the impedance discontinuity is very small compared to a 50 MHz wavelength in coax. Yes, there will be a disruption of the 50 ohm system, but if you keep your RF leads as short and direct as possible, you may never know the difference without instruments, and the ham on the other end will never know! In practical terms, this suggests that you should not have your connectors widely spaced on a large box. Your construction method needs to emulate the coax geometry as closely as practical for the minimum effect. Sometimes it is possible in a roomy box to continue the coax right up to the relay, jumpering the shield connections together with short lesds. Hope this helps. 73 de W1AEL

Finally someone figured it out. The Board also voted NOT to publish
even one word of the information on the FBI admitting to jamming the
Amateur Radio Service, available at the website below.

The goal at ARRL is membership dues at all cost, if they have
to become criminal co-conspirators, and become guilty of
misprision of felony (18 USC 4), or invite Sodomites into
the League they will. The root of all evil is the love of
money.

RAM has to be replaced every 10...15 years. 751A has better front-end.
751A has better dynamic characteristics. And, yes, it has that battery :^)
I'll newer sell my 751A. If I buy (better?) hf rig I use 751A with transverter
to work VHF/UHF/SHF.

Check out the March 97 issue of QST for a very good articla on using
an HP-200LX on packet with a BayPac BP-2 modem. I have one of the BP-2M
portables and it is very nice, it comes with software, etc.... and a ready
to wire cable you have to provide the connectors for your specific HT. Check
out http://www.tigertronics.com for info on the BayPac modems, and according
to this article you can check out ftp://eddie.mit.edu/pub/hp951x/NEW/ for
some nice interesting software for them. I hope that this helps some....
I would consider selling my BP-2M if interested.

Removed from .space

What a crock, so what if they voted not to publish the FBI jamming amateur radio. I guess the bottom line is, if you don't want your station jammed by the FBI then don't stockpile weapons, grenade launchers and explosives. Your commentary below the article in the NY Times is pretty bizarre. The Times wrote, according to your site:

>Mr. Dunagan also quotes another unnamed former resident as having observed "two or three
> illegal firearms silencers" and "approximately 100 fully automatic AR-15/M-16 machine guns
>within the compound, as well as tactical vests, radio equipment, police scanners and other
>paramilitary paraphernalia."

Then you commented at the bottom:

>So called "police scanners" are common items in amateur radio stations for monitoring Amateur
>Radio Service communications in the High Frequency, Very High Frequency, and Ultra High
>Frequency bands and are not illegal equipment.

Yea, so what's your point? Neither is purchasing ammonium nitrate but are you not a little concerned when the purchase of such chemicals is done concurrently with buying $200,000 worth of automatic weapons, grenades and bullet proof vests?

> The amateur radio station at Mount Carmel Center was fully licensed by the Federal
>Communications Commission and the two operators held the highest rating that the FCC can
> award. There were no violations of technical standards or law by this station. There was no use
> of this station in any criminal activity, nor planning for such activity.

> Because this station posed no threat or hazard to law, order, decency, orderly service of
> warrant, or public safety or order, and because there is no reason to suspect that it would be
> used for criminal purposes, the only reason to take action against it would be to prevent its use
>to report criminal conduct on the part of BATF."

What? your not serious are you? Hmmm let's see a group stockpiles weapons, grenade launchers and explosives and you think that an amateur station on thier site,

capable of communication around the world served no purpose in any criminal activity or planning of such? Do you REALLY believe that?&#65533; I suppose we should have waited for another Federal Building bombing before you would have been convinced that these people posed a threat.

"103 means 1000 pF"??? The last digit is a power-of-ten multiplier, i.e.,
103 means 10*10^3 or 10,000 pF.
-- -

One can bypass the arithmetic by just remembering that the last digit
indicates the number of zeros one should append (after the first two).

How exactly did the ARRL get screwed by Lambda? Because the club is now recognized by the ARRL? Is your problem the fact that they have different sexual prefrerences than you or is it because they are recognized by the ARRL? Should we also not recognize Jewish, Black, Latino, Asian, and Womens amateur radio organizations too?

I never been asked by the ARRL to associate with any particular club or organizaton did the you?. Are you willing to spend an extra $200 a year to support the ARRL discrimination law suits filed when they refuse to allow anyone YOU don't like to join?
I'm just curious what you think the ARRL should do here?

--From the RSGB's "World At Their Fingertips":

"...Interest was growing in the 56-60 Mc/s (5 Metre) band. To be long remembered were the tests conducted from the North Tower of the Crystal Palace in South London on May 21, 1933. L. Howard Thomas, G6QB, Donald Price, G6HP and Alfred Gay, G6NF, were in charge of the project but the man who brought it to notice of the general public was Douglas Walters, G5CV, who, at the time was Radio Correspondent of the Daily Herald. Flying in a Puss-Moth aircraft, chartered by his newpaper, Walters, using home-built equipment logged 5 metre signals from the Crystal Palace station up to a distance of 130 miles, thereby setting up a record for reception on that band. His report was ``R99 plus at 10,000 ft. somewhere north of the Wash.'' A month later, encouraged by the success of the Crystal Palace tests, Walters, in a De Haviland Dragon-Moth chartered by the Daily Herald, and George Jessop, G6JP, in a similar aircraft chartered by Popular Wireless set out in an attempt to establish two-way communication between aircraft using 5 metre equipment. Power was derived from dry batteries giving 7 watts input at the start but falling to 4.5 watts at the end of the trip. The tests - the first of their kind in the United Kingdom - demonstrated the advantages of the 5 metre band for reliable telephony communication between aircraft and between aircraft and ground using very low power and 2 volt battery valves. Like the first aircraft tests from the Crystal Palace, the second tests received wide publicity in the National and Technical Press."

What you have discovered in this group is basically a very few folks using
many different names. They think their purpose is to disrupt and destroy
not only this group, but amateur radio in general. This is done by on the
air activities and what you see here.

Please do not let these "stumpjumper, and BARF" malcontents disuade you from
participating in such a fine avocation. If you need any help, just ask for
it. There are MANY fine folks right here, willing to do so.

4627. Not Dealing with Maryland Hams !!!

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-25 00:00:00 UTC
From: dbbadge@aol.com
Message-ID: <19990225170726.11191.00000144@ng-cc1.aol.com>
Source record: 149571

It appears that I have raised some ire by the above message. While I do not want to group all hams as the same, it appears to me that if you have a HAM that is giving you all a bad name it might be in your best interest to either not condone what he has been doing-or if he is in your orginization to have him removed. I am in fact referring to Dennis Weal, W3EAL from Cantonsville, Maryland. A died in the wool Ham. This guy sells at a local Ham fest with equipment that is most probably obtained through double dealings. As long as a person is allowed to feather his cap by ripping off someone else and his "peers:" do nothing about it it is for an outsider, like me, to send the alarm out to other so they won't get hurt.Other organization do not stand for someone with low ethical dealings, why would a HAM group be different ? Isuppose that it is easier to turn a blind eye, stick you head in the sand or make believe that it dosen't happen. In short while you Maryland HAMS do not like me speaking bad about you- Do something about people like this guy or SHUT UP about it !

Never have I seen such poor service and people out of touch with those who pay their salary. (Well, maybe Washington)

From the beginning when i joined, first mistake, they had to seen my four certificates before ARRL got it right.

Now I tried ordering some books off their web site. Of course that didn't work, and the "discount" code they gave certainly was not usable. So I e-mail my complaint. I got one response. I called the guy to explain. He was not in at 4:30 PM in the afternoon, neither was his boss or Mr. Sumner.

They, Mr. Stafford, Mr. Sumner, and the rest of the staff needs to be replaced. Maybe we will see some progress. ARRL staff in the present form are not helping us or doing anything for us.

Al

In a thread in this n.g. I asked for suggestions on catching a thief on video who is pilfering office equipment. Thanks to all who have offered such creative ideas.

Now I need a video camera, the smaller the better. This volunteer center where I've been asked to help catch the pilferer is -- how do you say -- not cash-heavy. So, I'm asking for the loan of a survelliance camera, or as a tax write-off (the center is an IRS non-profit organization). Or, if you must have cash, will consider this last.

Camera must have NTSC video output, and require only a single power source. Color prefered, but b/w is acceptable.

Sorry about my modified return address, but I hate getting spammed.
My correct address is provided below if you choose to e-mail me.

Thanks,
Dave

> necessarily know whether the ILS data was good or not.

Still has his radar altimeter reaout though. Also has a backup anolog altimeter. The localizer, don't know about that,but I don't think that would endanger the flight. He would go around once he got to decision height and saw the runway wasn't where it should be. And this would assume bad weather. Actually , I notice most times once they get on final they go ahead and cancel IFR and do a visual approach. But this would be good weather and visability wouldn't be a factor. Altitude problems are what will eat your lunch. With all the redundent systems on a say, boeing, no real problem.Hopefully anyway. I haven't talked to many pilots about ILS distortion problems. But I would think the interferance would have to be real bad to be a bother considering how narrow and concentrated the ILS signal is. I know a few pilots, I'll ask them about it next time I get a chance. MK

You won't find me in my office at 4:30 pm either - I start work
at 5:45 am at home "on the tube" and frequently don't show up
at the office until 9 am if at all. and I go home before dark.

> They, Mr. Stafford, Mr. Sumner, and the rest of the staff
> needs to be replaced.

Judge Stafford does not keep regular office hours at ARRL HQ
because (a) he is a volunteer, not paid staff and (b) he has
a "day job" on the bench in California.

Do you think that YOU can do a better job as President or as
Geberal Manager?

Make your qualifications known to the League Board of
Directors (elected by the membership). The Board selects the
President and the Geberal Manager.

> Maybe we will see some progress. ARRL staff in the present
> form are not helping us or doing anything for us.

You get back from the League what you put in, not a smidgin
more.

As I have told several disgruntled clients/customers:
"Consider your bill paid up to date. Go deal somewhere else
from now on".

I'm not familiar with the ruling.

> Tell me, Timmy...why are you so supportive of the LAMBDA queers here.&#65533; Hmmm??

Why is it that you can never get more than one round into a discussion without posting something stupid like the line above? Does it bring you satisfaction of some kind? I can't imagine what it must be to work with someone like you. Nothing in my post says anything about supporting LAMBDA, what I do support however is equal access for all, ALL being minority, women, handicaped, gay etc. If these good ole boys who bark about LAMBDA being recognized by the ARRL were to ever be denied access to an organization THEY wanted to participate in, they'd be crying at the top of thier lungs, but it's OK to keep out just 'certain' types of people right?

The real queston is, why does it bother you that LAMBDA is recognized by the ARRL?
Your not being asked to associate or have any thing to do with them, any more than
your being asked to associate with any other minority&#65533; ham club that may exist.

Kevin Alfred Strom wrote:

> Tim, your ignorance about the illegal attack on the Mount Carmel
> Church, if not pretended, is astounding.

Well the Times reported they were making home made grenades, were they also trading these at gun shows to make money? Additionally, if the purpose of the guns was to make money it seems odd to this casual observer that they would need to stockpile $200,000 worth. Were they getting such a great deal that they were able to sell guns they had purchased at some tremendous profit? Seems like a good mutal fund would have done better.

I suppose that doesn't sound the least bit suspicious to you? Nahh they wouldn't have ever done anyone any harm, thats why thier leader led them all to thier death instead of simply walking out of the complex? No cause for concern here eh? I suppose the bullets found in the bodys of many of the burnt members were placed there by the FBI and ATF to throw the investigation?

> Probably the best way for you to become familiar with the facts
> would be to rent a copy of _Waco: The Rules of Engagement_, the
> award-winning and quite objective film on the subject.

That's fine but what makes you think this particular writer presented the 'facts', any story can be slanted both ways. One fact does remain, the deaths could have been prevented by simply allowing the FBI and ATF to enter the home. I can assure you if the FBI came knocking at my door the last thing I would do is barrade my children inside, then shoot at an officer trying to gain access. Nothing about that seems strange to you?

> The Branch Davidians were, in my view, adherents of a somewhat nutty

> money at gun shows, which aren't too different from hamfests.

Perhaps they would have lived longer if they traded Collins gear instead of weapons. There many churches in my neighborhood with members who are peaceful residents of my community, I know of no Church in my area that trades guns to raise money. Jim Jones was a peaceful resident of his community in California prior to moving to Guyanna, they were peacful while they were down there too, right up to the point where they shot

and killed several innocent people including a U.S Congressman. The Heavens Gate group were a really nice bunch of peaceful residents in thier community too, right up to the point where they all killed themselves, thank God they didn't take bystanders with them.

Is it logical to think that a religious organization like the Branch Davidians who chose death over simply walking outside of thier compound were not capable of killing or doing harm?

> Even the items that the illegal raiders were supposedly looking for
> (which were never found, by the way), namely machine guns, were
> perfectly legal to own as long as one purchases a permit for a
> couple hundred bucks. So this preacher and his handful of followers
> and their kids, who had never harmed anyone, had to be attacked by
> the equivalent of military force over a _permit_ violation?

I believe the FBI/ATF wanted to inspect the compound because of the suspicion of illegal weapons etc. Unless I'm mistaken they were given ample opportunity to leave, yet they chose death, you don't have to be an expert in the field or have detailed knowlege of every single item to know that there was a problem here. If there was nothing illegal on the grounds why was it nessesary to barracade themselves inside and then shoot an ATF agent who was on the roof? You point out my ignorance regarding the illegal attack, I'll point out that I'm here to discuss it and David Koresh isn't.

Let me play the devil's advocate here: That transpacific flight that
Mark is on loses contact with Air Inc, ("Aeronautical Radio Inc.")
(possibly due to Air Inc's computer-controlled radios malfunctioning).
Now those pilots are unsure if there's another plane at their altitude
that might be crossing their flight path, for Air-Inc normally does the
choreograph work for such transoceanic flights. Now what, Bill?

Oh, the one of the network news programs tonight mentioned that 90%
of hospital computer-controlled equipment is not compliant; gear
such as EKGs and defibulators were mentioned. Stay healthy, Bill!

Well, #1 I don't think all the radios are computer controlled. And even
if they were, I don't think they would be date sensitive.
#2 Ever heard of radar? They will know of someone is nearby. If someone
gets TOO close, you have an annuciator in the cockpit that
says:"traffic,traffic". Means to get your head out of your lap and look
for the plane you are fixing to hit. Anyhow if Honolulu radio, lost
their puters, I'm sure they have the gumption to use a non-computer
controlled radio. And as the flight plan is pretty much predetermined
before they ever left, if they lost radio contact,they would just
continue on their merry way. They lose radio contact on hf quite a bit.
Have to switch bands just like us hams when the propogation goes south.

So what? Did they program a defib or EKG machine to be date sensitive?

4659. QUERY - ICOM RADIOS - Which Ones Fit Description? AND, SE US area, Malicious Interference Information

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-25 00:00:00 UTC
From: "Todd L. Sherman" <afn09444@afn.org>
Message-ID: <Pine.A32.3.95.990225034619.28712A-100000@freenet2.afn.org>
Source record: 149626
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.policy,alabama.birmingham.radio.amateur

(Would appreciate direct replies to _afn09444@afn.org_, please -- if only because its faster and more convenient to pick out of the personal INBOX. Thanks. -Todd)

Which of the available Icom radios would fit the below description? We're trying to figure out the capabilities of a trucker (an Amateur Extra-class ham [unfortunately] with a vanity callsign) who has been causing malicious interference to repeaters in many counties here in Florida (whom we once TAILED through three counties), and possibly in other southeastern states along I-95 and I-10. For examples: Can he scan 440? Can he monitor two freqs simultaneously? Can he hear another frequency/channel at the same time as he is transmitting? ...Things like that.

- Operates on 2-meters
- About 50W max output
- SSB capability

Also, can anyone suggest inexpensive doppler DFing equipment that isn't limited to the possibility of damage with 100 microvolts RF or more? We'd like to get SOMETHING up in the area, fast.

He ALWAYS operates during working hours when our beam stations aren't home, and getting fixes on his position lately are near impossible without sitting 24 hours a day along the highways that pass through our county and watching for every occurance of a white, box-cab, flat-top, cab-over, cab-forward FREIGHTLINER model with "Intermodal Trucking Company" on the doors and a 1/4-wave mag-mount mounted forward center that goes by. (Oops! Did I just blab? Shame on me! 8-))

He's been harrassing us for almost two years straight now. I don't think I need to iterate our feelings towards this obvious mental case.

Some of his "usuals": 6-9, P-P, 5-5-5..., *-*-*..., B-A-D, overheard phone numbers, etc., in RC-85/850 DTMF pad tone tests; prank calls to innocent people and to 9-1-1 Dispatch; garbled voices; burps; Auggie-Doggie-like snickerings; interference to QSOs, to ongoing casual and emergency nets; always unidentified; at times at ANY hour of the day or night. 2:30am, 4:30am, 5:30am, 6am, 7am, 9am, noon, 1pm, 2pm, 3pm, 4pm, 5pm, 9pm, 10pm......He covers the darned whole clock.

He seems to "hang" in Marion County, south of us here in Gainesville, Alachua County, Fla. We suspect he often sits in truck stops between here and Ocala because he always seems able to get into both area's machines at

will. He's never gone for more than three days before returning again, suggesting he's grabbing loads possibly in other states and bringing them back here, where he causes interference again for anywhere from one to four days in a row. He varies his power to try to fool, goes to high when local stations are just too powerful to allow him access to the repeater and sometimes succeeds in overriding stations almost right BENEATH the repeater. We know he's affecting repeaters in Duval County, as well; HAS affected (but stopped) repeaters in Clay and Bradford counties; and possibly affects repeaters in Pinellas and Hillsborough Counties. They all report near-exact MOs. Each reports open-access patch repeaters being changed to coded-access patch repeaters -- if the patch hasn't altogether been removed. When this "jammer" goes through, defenses vary from changing from open to coded patch access, to all special user functions being disabled during, to the complete shut-down of repeaters. Very unfortunate.

Even after having once been TAILED by THREE of my MIF team trackers, and VIDEOTAPED, he STILL continues on. He's obviously got a mental problem as well as an addiction he just can't put to rest.

We _do_ have a case number with the FCC, yes.

How many other repeaters along the SE seaboard coastline are now either patch-less, or now no longer open access because of this guy? We'd like to know. It might also help us to figure out this guy's approximate "range" of affect.

He's sabotaging the hobby, this jerk.

Thanks,

Todd

This is correct...to be more exact, the high IF is 45.1 Mhz in the
800-900 Mhz range.
So the images are 90.2 Mhz above the actual desired frequency.

Do you mean to say Windows CE? My beta version of the 7X is an all mode transceiver which synthesizes its modes in software. To add modes, you simply install new software - kind of like the commercial modems used by ISPs. Perhaps the more recent versions have streamlined the software, but my version takes nearly six minutes to boot and to load all of its software under Windows NT workstation.

If the SWR climbs above 1.1:1, r.f. creeps into the microprocessor and Windows gives you the blue screen of death. Sometimes you get the blue screen of death "just because" (I forgot to mention that the radio has an LCD SVGA display).

I find that I get foolproof operation if I limit the use of the radio to playing the solitare game that comes with Windows. YMMV.

Even Icom has not made claims this far out there. I recall reading your article and a couple of white papers from battery manufacturers, though it has been a while ago, now. The white papers were suspect because of their links to the market place, however I read an article as recent as two years ago from a laboratory not linked, at least visibly, the marketplace or Icom. This was the one that came up with the 30 year figure, which is itself suspect. Chemical instabilities alone over that period would not support a 30 year lifespan even for a lithium.
I don't recall where I read the report, I, like you, read so many of them. I just don't catalog all the articles.

The pattern that all these articles point to, is that it is unlikely that the RAM backup battery is likely to fail soon. And if it does, its replacement is likely to outlive owner. So the while your assertions are certainly true that the battery can fail, the science and experience seem to support the conclusion that if the radio is used frequently, the lifespan of the battery can far exceed its shelf life.

BTW, Bob, your articles published here and elsewhere are well written and insightful. If no one else will say it, I will....And thanks for your thoughtful and useful posts. As opposed to some of the drivel here.

There's another aspect of the Y2K scenario that is
troubling.

As shown so clearly here on RRAP, and certainly noticed
by those who have worked any length of time servicing
technical apparatus, the technologists insist on overly
complicating almost everything they design.
How many times have I seen a case where, instead of using
a simple transistor switch, or even a reliable relay, the
designer would insist on using a complex, parts laden and
failure-prone circuit board? Just because "the technology is
there".

This factor is certainly nothing new, and is frequently
done in the name of Job Security. The end users know nothing
of what we design, must take our word for it that all this
added complexity is "necessary", and thus we can get away
with it at higher sales prices, and also support our
technical brethern who work on the stuff by supplying them
with lots of "work". It keeps the wheels greased with green
stuff, and Non-technical people cannot know the difference.

So how much of this is involved in the Y2K situation? How many unnecessary embedded overly complex time/date sensitive devices are lurking and laying in wait for the calendar to run down, that no one even suspects to be involved? I wish we could have confidence that this isn't a factor, but I'd bet it is, at some level.

Dick C

Rod,

Thanks for the URL. Sometimes it's a bit daunting to find what you need or just the right combination of search words to enter to a search engine. That page looks great and it was instantly bookmarked. :)

I was referring to the TravelPlus for Repeaters software which was advertised in the back of the New Ham Companion. A search on Dejanews yielded little information about it.

A relatively rare emergency happens. An emergency subroutine is called
for the first time since the system has been made Y2K compliant by
passing four bytes of year code on the stack instead of two. But
somebody forgot to check this particular emergency subroutine which
is still expecting two year bytes from the stack. It takes two year
bytes and thinks the other two year bytes are the control bytes to
be executed during this particular emergency. Is your life insurance
paid up?

What does Intermodal Trucking Company have to say about their driver?
Have you tried telling them about his erratic driving and blatant
disregard for public safety? :) If you're lucky enough to tail him
again, that might be a very good idea.

Wow...I came to this newsgroup in an effort to learn more about ham radio...and what I learned is a little scarey. Apparently there are a number of boorish, uneducated people that spend more time playing as if they are in a schoolyard than actually learning anything (and God forbid, bettering themselves). I will leave the hobby to the racist, self-serving bigots I have found in this newsgroup.

This is no different from any other quality issue with software. You need to use code coverage tools, regression tests, and simulated data to make sure you test all code paths. Programs used in life or death situations are much more rigorously tested then PC software.

If it was written in C/C++ then time/date is a time_t which is a 32 bit quantity of seconds from a fixed reference time. The program was Y2K compliant the day it was written and no changes were made.

>MK

Some of them actually do need to know the date, because they print out
a log of their operation as evidence for our litigation mad society. Most
don't care about the date, of course. The simple and obvious work around
for the few that do is to *lie* to the machines and tell them it is an earlier date.
They have no way to check, so they'll believe that, and continue to work just
fine.

Congress is currently working on several bills to deal with the litigation
madness. The one I like best fines the *lawyer* treble damages for filing
a frivolous suit related to Y2K. I'd like to see that universally applied to all
lawyers and all lawsuits. It might return some sanity to the courts if the
lawyers found themselves *personally* accountable for the suits that
they file.

The only computer in a hospital that *really* cares about the correct date
is the billing computer. That can be worked around too, but may require
the hiring of a couple of minimum wage workers to wield a manual rubber
stamp to correctly date bills. Most for profit hospitals *have* fixed this
problem already, however. The incentive to do so is obvious. Some of
the non-profits haven't, but since they mostly operate off tax funds which
are allocated annually in a lump sum, it is probably a moot point anyway.
(The accountants *are* going nuts about Y2K. It is going to make audit
trails very difficult to follow. But the very fact that they're going to have
to look at things more closely may actually reduce some of the monumental
fraud in the medical care system.)

Yet another example of how operating on 11 meters wrecks brain cells
worse than smoking crack cocaine.

The bidding opened at $250 and is already at $285.

All that for an IMD/RFI generator -- when you can buy 2 KW industrial
plasma generators on 13.56 MHz all day long for $200.

The truely bad situation could develop if inadvertent interference were
to cause distortions of the ILS localizer signal (~108-110 mHz). While
less likely, glideslope signal (~300 mHz) distortions would be even
worse.

Unless the "out of service" flag pops up on the ADI, the pilot wouldn't
necessarily know whether the ILS data was good or not.

I have an HP200LX (1MB model, probably same as yours) and it runs
fine on packet. I use a conventional TNC and the built-in DATACOM
applet. Not pretty, but it works fine.

I also use it with all sorts of other com port things, such as a GPS unit
with
homebrew software. The LX makes a great comms diagnostic tool.

I built a razor blade detector years ago, and it worked. Getting the requisite carbon rod to place on top of the razor blade is the hard part - modern batteries are hard to pull apart - do they still have carbon rods in like the old ones did?

Stick to a Ge diode - much easier.

Fred

Yea but does the filter truly work. I mean the moron still runs his
mouth. Out come the lies and half truths. I I I I I I it still goes on
and on. I do belive that the porkbut filter truly doesn't work. We all
still hear his over powered over modulated mouth on 3.901 and 20 meters
daily. So the filter must not work. I ask where can I get a porkbut
filter that truly works. I go 10 khz down the band and I still hear I I
I from the porky god himself. I wonder if the FCC really did a fine
tooth comb inspection of king porkbut. I wonder if the 6000 volt power
supply and the pair of 8877s were in the garage and old porky lied to
the FCC offical" Oh that amp doesn't work!" as he brisked the FCC
officals past the amp to his so called spotless radio room. Or was the
amp in the back closet and he just plain lied to the fact that he even
owned the amp. Oh where can I get a porkbut filter that truly works. I
know for a fact nobody dares to complain about his extrmly wide signal
for fear of being shot by the widly bragged about 9mm. He brags about
all the shell casings laying out on the back deck and those he found
that where over a year old. I wonder if the cops were to go back there
would they find any bodies back there. Na I don't think porky has the
guts to kill anyone. Remeber a barking dog never bites. I I I Oh where
do I get a porkbut filter that truly works. The Hollingsworth filter
provied by the FCC does seem to be working. Porkbut is still III III III
all over the bands. When porky keys a mic everyone listens even if they
are 20 KHz up and down the band. And yet the porkygod still brags about
how clean his station is and how dirty everyone eleses is. I I I I I I
I I I, maybe we will all get lucky and one of those puss soars on the

back of his neck will ingulf his over sized head, then maybe I I I I I I will be history and ham radio will go back to being a service for the public and not a service to king porkybut the lord god of the air waves, at least he thinks so anyway. I I I I I I I I I. Of corse this is my opinionI could be wrong but I dought it. Once a porkbut always a porkbut. Lies and more lies roll out of mouth like shallow water in a stream Babble Babble Babble. Oh where do I find a porkbut filter that truly works. God knows porkbut doesn't work. LIE LIE LIE like a rug. And what does a rug do Nothing just like porkbut.

Hi,
Has anyone ever modified a Tait Mariner II (marine VHF) FM Transceiver for use on two metre FM?

I have located one of these beasts at the very best price and I even have the service manual. Any advice would be appreciated.

The model number is T-530B/MA and the serial number is 744846.

Please help!

> I sold the 751A when I found
>>out about the battery backed RAM that has to be replaced every few years.
>
>RAM has to be replaced every 10...15 years.

10-15 years may be conservative. Independent tests indicate that if the radio is used frequently that battery life could far exceed 15 years. One independent report suggested that 30 years is not out of the question. Now, while I think that 30 years is a wee bit more than optimistic, given the quantum leaps in battery life in the last few years, replacing the RAM battery once could land you in that 30 year ball park without too much of a stretch...meaning that the radio is likely to out live you.

Icom has been dealing with this issue on the R-71 for years. My last dealings with the tech dept in Bellevue were illuminating. They have replaced a few backup batteries over the last couple of years. But NEVER because one had died. Only because the owner was nervous about the possibility of failure.

If an operator's reason for shelving an ICOM is the RAM battery, then the operator is selling his equipment very short. And compromising his hobby with needless worry in the process.

The main problem is going to be people's reactions and overreactions to expected Y2K problems. Hoarding, empty store shelves, runs on the banks, etc. And then you'll have the looters and other criminal-types who will try to make out on the situation. Especially if you live in a big city or other...uh, "mixed neighborhood."

Independent of whom? If I recall, it was the ICOM folks who
asserted the extremely long battery life "extrapolation" after
I published the original backup battery note in a 1985 QST.

>ARRL based on race, religion or gender.

I notice you conveniently left out "sexual orientation." From what I
understand, this was never ruled upon. ARRL caved in and settled out-of-court.
If they would have had the balls to proceed, they might have received a
favorable ruling...similar to the recent court rulings that the Boy Scouts of
America CAN exclude queers from their organization.

Tell me, Timmy...why are you so supportive of the LAMBDA queers here. Hmmm??

Actually you have got this wrong,(looking at the Japanese site) it will be using a version of windows lite, like what is found on the sharp and HP palm-top computers. This means it should be able to run various Packet programs etc. This is all a nice feature coupled with the relatively large colour LCD display. Roumors sugest various slow scan formats will be available and operate with the wast digital audio processing available from the TI RISC chips being used. cheers Eric ;-)

Hi--

A couple of weeks ago, I rode with a couple who
had recently replaced their Chatterbox system
with two Radio Shack citizen band HTs. They placed
the radios in the pockets of their tank bras, ran
power lines to the battery, and took a coax lead
to antennas mounted on their license plate frames.
Their microphone/earphone sets were from Radio
Shack, too, so you might be able to find something
ready-made or easily-modifiable there.

Please post your findings: I've thought about
taking my FM gear along for longer rides.

Ever had a neighbor that stirred up trouble everywhere he went? This is the Drewster. He stirs it up here and everywhere. Take for example his "power walks" he took while living in Florida. (First off, can you imagine that fat slob power walking?) Anyway, Drew cut through the campus of the local elementary school. The officials always on the lookout for perverts stopped the Drewster from walking on campus. He put out a message on the internet asking if a lawyer would help sue the school system. Can you imagine the balls on this guy? Wanting to sue the school because they wouldn't let him walk on their property. What a goofball! Well why try and explain it, below is the original message from the Drewster. Enjoy.

Message 1 of 1 for search ~a (mnmaniac@aol.com) & ~g (fl.politics)

The Peoples Republic of Orange County Schools
Author: MN Maniac <mnmaniac@aol.com>
Date: 1997/06/03
Forum: fl.politics
sponsored by:

more headers author posting history

What do y'all make of this situation?

I'm a "Power Walker", which means I take long, brisk walks as part of my
daily workout routine. I average 8 miles/day, 6 days/week. I live in a
fairly new Orange County subdivision with a neighborhood elementary
school. Since we moved here last July, my daily walks have taken me
through the parking lot of the school. Not into the school building, not
onto the playground; simply across the length of the parking lot. For the
past 11 months, nobody has had a problem with this. Today, I was stopped
by a security guard and questioned as to what I was doing there. After I
explained that I lived in the neighborhood and was on my daily walk, I was
told that all "visitors" on the school grounds must sign in and be
assigned a "badge." When asked why nobody had mentioned anything to me

over the past 11 months that I have been walking through there on
almost a
daily basis, I was told that it was because "a parent called and
complained. She was concerned about the childrens' safety."

So, let me get this straight...even though I am a law-abiding citizen
who
PAYS for that school with my property tax dollars...even though I had
done
nothing suspicious, committed no crime, and did nothing to endanger
the
safety of anyone at that school...even though I have no children of my
own, but yet am forced to pay ridiculously high school taxes to
support
the education of other people's children...I cannot walk through the
PARKING LOT of my neighborhood school without being given official
permission to do so, simply because a parent (whose children I am
supporting with my property tax dollars) feels that my walking through
the
school parking lot may be a threat to the "childrens' safety?!"

If there are any legal professionals in the audience, I would like an
opinion as to whether or not they have a legal right to prohibit me
from
walking on the premises. If not, what is my legal recourse in the
event
that they attempt to force me from the premises?

>repeaters and two-meter handhelds.

Repeaters, yes. Base stations, not unless there is a
properly licensed control operator at the base station. This
was ruled upon a LONG time ago.

>The trouble with this is that the FCC restricts what kind of
>conversation can take place on the two-meter band.

And every other ham band as well. So does international
communications law. Ham radio is not a common carrier where
"anything goes".

>If you use a repeater to, say, order a pizza, that is considered
>"commercial use" and the FCC can come down on you like a load of
>bricks.

Or a load of cheese. You are "beginning to see the light".

>Also, I'm not sure how security works on such repeater
>systems. How would I prevent someone else from using it to make
>a long-distance call?

That's the easy part. Digital or analog codes are permitted to
establish communication, and in fact the licensee/control
operator is required to ensure that unauthorized persons do not
access his/her station.

>One alternative might be to use the FRS band, since that is less
>regulated and offers some kind of rudimentary security. The
>trouble with that is, I don't know of any FRS radios with DTMF
>keypads. Are there any?

The FRS is not permitted to be interconnected with the public
telephone network so you won't find any such devices on the
market (legally).

>Better still, are there any amateur transceivers that can
>transmit a full-duplex, encrypted, digital signal? If the answer
>is no, then why is the amateur market so technologically far
>behind cellular?

The answer is no, and the reason is that amateur communications are not allowed to be encrypted for security. Say it in the clear or go to a common carrier (mobile radiotelephone, cellular, PCS) service. Nothing stops full duplex as long as it is in the clear. We have a number of 440 MHz folks who use it in the San Francisco area.

This draft would again unite the nations youth and give them something
to cherish.
It would teach them about honor and obligation as well as some respect
for others.
Each recruit could serve 3 years or more depending on the nations needs.
Those that refuse to serve would be shown the way out of the country.
A 4-f could mean missing a limb,an eye or deaf.
No school deferment, only delay.
We could get this sorry mess of a country back on track and have some
military strength again.

because I
have searched the web for days now and CTE /ALAN / MIDLAND dont know who

actually owns the radio as far as I can see.

I can access the following frequencies;
143.000-147.000
433.000-437.000

The specifications of the radio say

General
VHF 144.000-145.995
UHF 432.000-435.995

Transmit
VHF TX 118.000-165.000 (FM)
UHF TX 400.000-475.000

Recieve
VHF 100.000-173.000
UHF 350.000-469.950

Maybe it is just me but I cannot access any lower than 144!!! what is
the
problem?

Please help I need this frequency range for my work frequency 130.575.

4760. Frequency Protection Act...A New Begininng

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-26 00:00:00 UTC
From: erlpnk4yz@aol.com
Message-ID: <19990226074028.12875.00000503@ng-fw1.aol.com>
Source record: 149537

With the recent closure of the Impeachment proceedings, the new Congress will be soon conviening and with it a new opportunity to REALLY protect Amateur Radio into the 21st Century.

The Morse Code issue aside, the biggest threat to the Amateur Radio Service is the encroachment of commercial concerns. I think it ironic that the commercial concerns were the ones that pushed Amateur Radio Operators into the "shorter" wavelengths, and now they are the ones anxious to push us back out.

The Spectrum Protection Act will ensure that no matter how the FCC may "reassign" or "reallocate" "our" spectrum, they would be obligated to make sure we are granted equal bandwidth elsewhere.

The recent FCC issuance of an Experimental License to the ARRL to exercise on the 5MHz band is proof that the exodus from HF to UHF and higher is creating a vacuum in HF and the lower VHF portions of the spectrum, and I think we'd be foolhearty to not take advantage of that.

I personally think any HF allocation presently existing is safe from any such action, and I am willing to bet that if we were to petetion the FCC for it, we would get new allocations in the 30-50MHz range with little resistance. Much of the 11 meter "export" rigs and many of the 6 meter rigs and trransverters easily cover this portion of the spectrum, and would make it wide open to all the NCT's looking for new horizon's to explore.

The following list are persons serving on the House and Senate Commerce Commission that oversee's such enactments. Please consider a letter of support for this Act and consider we are acting on our children's behalf, too, not just ours!

Senate Republicans: Senate Democrats:

McCain-AZ Hollings-SC
Stevens-AK Inouye-HI

February 26, 1999
Target: rec.radio.amateur.misc

Welcome to the W8MMQ Wire, for February 26, 1999! This newsletter is distributed weekly by W8MMQ and the Radio Society of Central Michigan, and is available free to all radio amateurs.

If you would like to receive this newsletter via email, or would like to be removed from our mailing list, contact Dan/W8MMQ at w8mmq@voyager.net. Your email will be answered as soon as possible.

In this issue: a Delaware ham must retake exam; a new amateur radio satellite is in orbit; upcoming contest information; and much more!

A DELAWARE HAM MUST RETAKE EXAM
The FCC has notified a Delaware ham that she must take her Amateur Radio examinations again or lose her license. The FCC's Riley Hollingsworth, K4ZDH, says "questions were raised" about how Sheila Bowden, N3QQS, of Millsboro, upgraded to Extra, and said the FCC is requesting that Bowden start from scratch and retake "all the elements." Bowden was notified February 16 in a letter from Hollingsworth.

The FCC has the authority under Part 97 to re-administer exam elements previously administered by VEs. The FCC may administer the exam itself or designate a VEC or VE to administer the retesting session--typically employing a VEC that's different from the initial testing session.

The FCC told Bowden that she must retake the Amateur Extra Class examination series at an ARRL/VEC session before March 19 or lose her license. "You will be granted an Amateur Radio license consistent with any elements that you pass upon re-examination," Hollingsworth's letter said.

Hollingsworth said the FCC plans to call in "25 to 50 more" amateur licensees for retesting in the near future. Those individuals have not yet been notified, however. In all of those cases, Hollingsworth said, the FCC has reason to suspect the integrity of the examination process.

"The ham community needs to have a sense of confidence in the examination system," Hollingsworth said, adding that enforcement must not focus solely on operating violations. "This is a critical link in the chain."

Last month, the FCC dismissed the Extra class license formerly held by Bowden's husband, Wayne, after the Commission discovered "irregularities in the administration of the examination by the Volunteer Examiners." Wayne Bowden, formerly AA3RT, took the complete Amateur Radio examination series at an October 4 W5YI-VEC session. He had not held an amateur license before then.

The FCC is continuing its probe into alleged testing irregularities at Pennsylvania W5YI-VEC sessions October 4 and 6, including allegations that examinees might have been coached or given test answers.

NEW AMATEUR RADIO SATELLITE NOW IN ORBIT
K7RR reported via W7RAQ that the Delta II rocket carrying the South African "Sunsat" satellite was successfully launched on the morning of Tuesday 1999-Feb-23 at 02:20 Pacific Standard Time.

This launch came after 11 unsuccessful attempts to launch the Delta II from Vandenberg Air Force Base in California. Sunsat successfully separated from the Delta rocket at T+1 hour, 40 minutes.

Taken from the SpaceNews Newsletter, 2/22/99

UPDATE: THE INTELLIGENCE REPORT CHANGES FREQUENCY
Last week we reported that the Intelligence Report, a nightly patriot radio program on shortwave, had changed frequency.

The day after our newsletter went out, it was announced that the Report had been removed from WGTG, and removed from shortwave altogether.

The program, hosted by Michigan Militia advocate Mark Koernke, can still be heard on satellite and the internet. The Intelligence Report web site says that the program left the air for financial reasons.

For more information, visit http://www.republicradio.freeservers.com/.

W8MMQ/KC8KFZ

UPCOMING CONTESTS AND EVENTS
For the latest amateur radio contest information, visit the ARRL's Contest Calendar, at http://www.arrl.org/contests/. Also, for the latest information on upcoming events and hamfests, visit the ARRL's Hamfest Calendar, at http://www.arrl.org/hamfests.html.

The CQ World Wide 160-Meter DX Contest, phone portion, will run from 2200-Z on February 26 until 1600-Z on February 28. Operate 160-meters and phone mode only!

The YL International QSO Party, phone portion, will run from 0000-Z on February 27 to 2359-Z on February 28.

The RSGB 7-MHz Contest, sponsored by the Radio Society of Great Britain, will run from 1500-Z on February 27 until 0900-Z February 28. Operate CW only, from 7.00 to 7.03-MHz.

The annual Great Lakes Division Convention, in Cincinnati, Ohio, will be held on February 27 through February 28. For more information, email gldivconvention@juno.com.

DX REPORT
From Cuba, T48RAC will be operational from the 1st to the 8th of March. This counts as NA-015 for the Islands on the Air awards programme.

From Hawaii, NE8Z/NH7 is active until the 6th of March, using CW on the WARC bands. This counts as OC-019 for IOTA.

From Seychelles, S79AG and S79XB will be on the air from the 1st to the 14th of March, on 40 and 80 metres only. This counts as AF-024 for IOTA.

And from Wallis and Futuna, FW5FN will be active until the 8th of March, on 10 to 160 metres, using mostly CW, but also some SSB and RTTY. This counts as OC-054 for IOTA.

These DX news items came from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE.

Taken from the Radio Society of Great Britain

WE NEED YOUR HELP!
If you or your local amateur radio club has some information that you would like to contribute to this newsletter, just email us and let us know!

We are looking to expand our newsletter, and we could use all the help we can get from our readers.

> sympathizer, or not?

Thought I made that clear in the last post, let me spell it out for you. I support equal access for all that includes minorities, gays, women etc. If in your mind you consider me a homosexual sympathizer then so be it. I have no interest in the lifestyle but support their right to have their own ham radio organization, and have it recognized by the ARRL the same as I would support a Jewish amateur radio club, or a racial minority radio club, although I have no desire to be Jewish any more than I do to be homosexual. I support these issues because it adds to the foundation of MY freedom, if for example I chose to vote down the application of a minority who wanted to join an organization I was involved in then I should expect the same treatment. I would not want to be denied access to an organization for example because I have an interracial marriage. Imagine being denied access to a broadcasting organization that you wanted to join due to the status of the organization and the fact that they could provide you with connections in your industry to better your career but were denied access because they believe that only married people should join. After watching many of your colleagues in the industry pass you by due to their association what would you do?

Put a 20 meter Hustler mobile antenna on the roof of your car, run coax into house and you'll be good to go. If I can hear the station, I can work it with my 9420.

73,

Mike

4768. Re: mod TS-530> 11-m?

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-26 00:00:00 UTC
From: Oris <oris@dirtball.com>
Message-ID: <36D6B49D.746@dirtball.com>
Source record: 149545

Why would you want to ruin a good 530? It doesn't even have am. Isn't most all CB work is am? If you got to know there is a crystal pack in the bands switch. Each position on the band switch goes to a piticular crystall. You can look at the freq of each crystal in each band postion. Then look at the differance between each crystal in each band position. Then you can detremin the freq of the crystal needed to come up with 11 meters. Now it is better to switch out the low end of ten meters then the 12 meter crystal. After you figure out the freq of the crystal needed and you have switched out the crystal you will have to retune that ocs. I will remind you that this ruins the radios type acceptance and makes the radio illeagal. If the FCC were to catch you operating the radio after you made the mod you could be fined. So I would advise you to go out a buy a CB base and save this radio for amateur operation. Although some of the hams act like theiven CBers. The Service is dieing becaause its not a service anymore its a group of self lothing, self servicing self centered pigs. So maybe your better off doing the mod.
73 from Oris

Probably because you misspelled your name three times, just as
you misspelled "I" and "send" above.

> Now I tried ordering some books off their web site. Of course
> that didn't work, and the "discount" code they gave certainly was
> not usable.

But think of the thousands of orders that have been completed without
a single problem and you can't help but conclude that one little "blip"
is really insignificant.

Enjoy the weekend, Jeff WH6U

I'm looking for info that will help me use 2-Meter ham radio on my motorcycle. I have an Alinco DJ-560 that I want to keep in my pocket, and wire earphones and a mic into my helmet. Maybe run a coax out to exterior ducky or whip.

Earphones are no problem, already done that. The mic is what I have no info on. Do I need to worry about impedance, power, polarities, etc.? Does anyone have such info? What common parts should I look at? I know RatShack sells mic elements for a couple bucks, would they work? Are there schematics of working projects out there anywhere?

I'd rather not have to solder this stuff up, but everything I've seen so far has had problems (headset too bulky to fit under helmet, not enough audio output, etc). If you know of a good cheap earphone/mic that'll work inside a closed-face helmet, let me know that too; maybe I haven't tried it yet.

Please post replies here and in email to porgeDEATHTOSPAMMERS@rocketmail.com (remove all capital letters).

FCC SHUTS DOWN TROUBLESOME BAY AREA REPEATER

The FCC has shut down for 120 days the K7IJ repeater facility on Grizzly Peak in the San Francisco Bay area and told the licensee his ham ticket could be in jeopardy. The FCC took the action by modifying K7IJ's license to prohibit repeater operation starting midnight February 28, 1999. The repeater operates on 145.29, 223.78, 440.175, and 441.175 MHz. The FCC also set aside recent license grants of four individuals accused of unlicensed operation on the repeater prior to obtaining their amateur tickets and other

behavior. The cases, the first major VHF/UHF enforcement actions the FCC has taken in recent months, were brought to the Commission's attention by the Amateur Auxiliary.

The FCC's Riley Hollingsworth, K4ZDH, said that for almost a year, the repeater's control operator, identified as Blake B. Jenkins, N6YSA, of Berkeley, California, "has apparently not only allowed, but encouraged, use of the repeater by unlicensed operators, rebroadcast of cordless telephone calls, playing of music, and profanity and obscenity." He said extended QSOs have taken place between the control operator and unlicensed stations.

Hollingsworth said the situation was brought to the attention of the licensee, Bruce Wachtell of Carson City, Nevada, but nothing was done. "Such operations are not only contrary to the Amateur Radio Service rules and frequency allocations, but degrade the service for legitimate radio licensees as well," Hollingsworth said in a certified letter to Wachtell February 25. "The operation of the K7IJ repeater system in this manner may reflect adversely upon your qualifications to hold a Commission license."

Hollingsworth said Jenkins' "actions and omissions" while control operator were under separate FCC review, along with those of the secondary control op, Steven R. Rossi, KE6LNH, of Novato, California. The FCC set aside the recent license grants or upgrades of James C. Walker, KF6VAA; Gordon B. Reese III, KF6QKA; Michael J. Nichols, KF6UAS; and Eric B. Shuler, KF6BMG (ex-KF6UJU) pending further investigation. The FCC has permitted Reese, who just upgraded to Tech Plus, to retain his Technician operating privileges while its investigation continues.

The FCC also warned Mervyn Ehambrave of E Palo Alto, California, about unlicensed operation on the K7IJ repeater, and warned Timmy O Sheen Sr, N6MZA, about behavior including "jamming and rebroadcasts of cordless phones" on the repeater, Hollingsworth said.

SUNSAT LAUNCHED--FINALLY!

After more than a month of delays and aborted launch attempts, the Delta II rocket carrying the South African SUNSAT Amateur Radio satellite and other payloads lifted off February 23 from Vandenberg AFB in California. Early reports indicate that the SUNSAT payload deployed and the ground team has communicated with the satellite and monitored telemetry. "SUNSAT relayed the temperature of both its top and bottom plates," the team reported. "Both temperatures were quite low, which is good for the condition of the batteries." SUNSAT should be fully operational in about a month, according to the SUNSAT team.

Because of weather and technical glitches, the Delta II launch carrying the Advanced Research and Global Observation Satellite (ARGOS) primary payload as well as SUNSAT and the Danish OERSTED satellite was put off numerous times since its originally scheduled January 14 launch date.

SUNSAT, which stands for Stellenbosch University Satellite, takes its name from the South African university whose students constructed the payload. Stellenbosch professor Garth Milne, ZR1AFH, is heading up the effort.

The SUNSAT package includes digital store-and-forward capability and a voice "parrot" repeater that will be used primarily for educational demonstrations. The unit has two VHF and two UHF transmit-receive systems. For more information on SUNSAT, visit http://sunsat.ee.sun.ac.za.

TEXAS HAMS MOUNT PRB-1 EFFORT

At the request of radio amateurs, a bill was introduced in the Texas House of Representatives to incorporate the essence of the limited federal preemption, PRB-1, into state law. The measure, HB 1345, was introduced by State Rep Patricia Gray at the request of Karl Silverman, N0WWK. Silverman is president of the Johnson Space Center Amateur Radio Club.

The bill would amend the Local Government Code in Texas to prevent local jurisdictions from enacting or enforcing ordinances that fail to comply with PRB-1. The bill further would require ordinances dealing with Amateur Radio antenna placement, screening, or height based on health, safety or aesthetics to "reasonably accommodate amateur communications" and "represent the minimal practicable regulation to accomplish the municipality's or county's legitimate purpose."

A hearing on the bill before the Land and Resource Management Committee is set for March 1. Silverman is scheduled to speak on behalf of the bill, and other speakers also might have an opportunity as well.

A letter Silverman circulated to Texas clubs to gain their support for the measure cites the success of Virginia hams in passing the nation's first and only specific tower protection bill. Silverman's appeal asks hams to contact the governor and state lawmakers to express support for the pending legislation. He's also asked Texas hams to turn out for the committee hearing March 1 (8 AM CST, Room E2030, Capitol Building).

Last year, the Plano Amateur Radio Klub (PARK) was instrumental in negotiating a amateur tower compromise in that Texas city in the wake of concerns over Amateur Radio antennas and interference. The compromise would permit 50-foot towers or units that could be cranked up to 75 feet while in use without requiring a special-use permit.

OHIO HAMS HELP SEARCH FOR MISSING GIRL

Hams in Ohio's Miami Valley helped to search for a nine-year-old girl reported missing February 7. Erica Nicole Baker of Kettering failed to return home after walking the family dog near the Kettering Recreation Complex. The dog was found--still wearing its leash--about three hours later.

The youngster's parents are separated. Erica's father had dropped her off at her mother's home the afternoon of February 7. She was last seen in the park wearing a pink raincoat, a Winnie the Pooh sweatshirt, and blue jeans. An official search, which included search dogs and involved dragging, then draining, a pond near the park complex, turned up empty-handed.

The Dayton Amateur Radio Association van, the Warren County Mounted Search Team, and RACES were called in to aid with the search February 11. Hams from

Warren, Greene, Montgomery, Clark, and Darke counties aided police, fire, and search teams by providing communication in the field and maintaining posts around the search perimeter.

The search was expanded to cover a 150-square-mile area around the rec complex. Miami Valley Urban Search and Rescue Team asked the DARA van to return February 12 to serve as command post support at the Germantown Dam Reserve. A decision also was made to use HF and packet instead of the well-monitored VHF and UHF repeaters, to minimize eavesdropping. Among those assisting was ARRL Great Lakes Director Dave Coons, WT8W.

As of February 25, Erica remained missing, according to Kettering Police. Her disappearance has been the subject of episodes on America's Most Wanted. Anyone having information on the missing girl is asked to call the Kettering Police, 937-296-2570.--Bev Priest, N8VZV

HAMS STILL ON HOLD FOR ULS

While the FCC's Wireless Telecommunications Bureau began using the Universal Licensing System (ULS) February 16, hams remain in a holding pattern on ULS until the FCC establishes a ULS Amateur Service database. That's not expected to happen until later this year. This means that hams still must use Form 610 and its variations. These so-called "pre-ULS forms" are valid until further notice. On-line services are limited to Form 900 renewals within 120 days of expiration and Form 610V vanity call sign application. License modifications are not yet available on-line unless done at the same time as a renewal.

The ULS is a new, interactive licensing database that consolidates and replaces 11 existing databases and licensing systems, including the Amateur Service. Among other things, it will replace the venerable FCC Form 610 series with a new Form 605 and provide on-line filing, modification, and renewal for amateurs.

In January, the ARRL petitioned the FCC for minor alterations to the ULS rules. The League said it wants the FCC to continue to issue paper license documents; to come up with a way for applicants not having a Taxpayer Identification Number--typically a Social Security Number--to meet ULS requirements to provide one; and to include on Form 605 a section for Volunteer Examiners to certify that an applicant has met the requirements for a new or upgraded ham ticket.

The FCC subsequently did make provisions to assign TINs to those doing business with the Commission who have no legal way to obtain one. The "assigned" TINs will consist of the letter "A" followed by eight digits. They will not be available to those eligible to hold a Social Security Number. Alien licensees needing an assigned TIN should contact FCC Technical Support at 202-424-1250.

Prior to its latest filing, the ARRL had expressed concerns that the FCC might do away with paper license documents altogether and rely instead on the "license grant"--the virtual document that resides within the FCC's computerized amateur database. The League pointed out in its January

petition that some states regulate possession of scanning receivers but exempt amateurs, and inability to produce a license document could result in "arrest and criminal prosecution as well as seizure of equipment by local law enforcement." The League said hams operating overseas also often must produce a paper document. The ARRL noted that the CEPT agreement requires US hams traveling in CEPT countries to possess a US government-issued license document and that ITU regulations "appear to require" a government-issued license document.

CHARGES DISMISSED IN GODSEY CASE

It took more than two years, but all charges against a Kentucky ham for impersonating a public servant and disorderly conduct finally were dropped in December. Greg Godsey, KF4BDY, of Hopkinsville, was just shy of his seventeenth birthday when he was arrested by police in his hometown.

At the time of his arrest, Godsey was active in ARES as Christian County EC. He claims the impersonation charge stemmed from his ARES association. Police also had charged Godsey with carrying a scanner capable of receiving police frequencies and confiscated his Radio Shack HTX-202. The scanner charge reportedly was dismissed in court the following month, and his H-T was returned to him. The other charges had remained on the court docket, however.

Godsey, now 19, said the charges were dropped in December after both sides agreed to not sue anybody over the matter. Godsey says he and his family spent more than $3000 fighting the charges against him.

W4EHW OPERATORS COMMENDED

Operators at W4EHW ("Early Hurricane Warning") at the National Hurricane Center in Miami have been honored by the National Hurricane Center. The 30 operators received Certificates of Commendation in late January, presented by NHC Deputy Director Max Mayfield. He expressed his thanks for the operators' commitment and dedication in supporting the Center's staff.

NHC Director Jerry Jarrell says ham radio volunteers play an important role in storm forecasting and tracking. "Despite all the technological advances in satellite imagery and modern hurricane hunter airplanes, the hams many times are the only ones that can tell us what is actually happening on the ground, and, for this we are grateful," he said.

Volunteer amateurs have been donating their time and equipment to the National Hurricane Center for nearly 20 years now, helping to gather weather and storm data from hams along the US coast and throughout the Caribbean. During the busy 1998 season, W4EHW operators logged more than 180 hours for Hurricane Georges and nearly 90 for Hurricane Mitch--plus many hours for other storms. During Georges, W4EHW received nearly 500 reports by Amateur Radio, fax or the Internet. Hurricane forecasters use data received from amateurs via W4EHW as an aid in preparing their forecasts.

According to the NHC Coordinator for Amateur Radio John McHugh, KU4GY, Amateur Radio support to the Center began humbly during the 1980 hurricane

season. "Julio Ripoll, WD4JNS (now W4EHW assistant coordinator), carried a borrowed HF radio in a cardboard box to and from the Center whenever a storm threatened," he recalled. "He set it up on a forecaster's desk, ran a wire antenna, and with a crew of five volunteers, operated for 12-hour shifts."

Today W4EHW sports a donated state-of-the-art station that includes HF, VHF, and UHF radios, six antennas and two computers that handle APRS and Internet communication. The 30 volunteers typically work three-hour shifts in conjunction with the Hurricane Watch Net on 14.325 MHz, usually starting when a hurricane is within 200 to 300 miles of land. This year, because of the threat that Georges might hit Miami and the NHC, one operator, Hank Collins, W8KIW, and his wife were "locked down" inside the center for 18 hours, McHugh recalled. Along with McHugh and Ripoll, Hurricane Watch Net Manager Jerry Herman, N3BDW, was among those receiving commendations.

For more information, visit the W4EHW Web site, http://www.fiu.edu/orgs/w4ehw/

SOLAR UPDATE

Solar savant Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down this week, but so were geomagnetic disturbances after a rough start. On February 18 the Planetary A index was 54, the Boulder A index was 41, and the high latitude A index was 89. February 19 wasn't much better, but on February 20 and 21y geomagnetic activity was very low, with K indices at all latitudes at zero during many periods.

Average solar flux was down about 45 points from last week to this week, and average sunspot numbers were off about 65 points. Solar flux should continue to decline, with predicted flux values for this weekend, February 26-28, at 120, 118 and 115, and planetary A indices at 8, 8 and 10. Solar flux is expected to bottom out around 105 from March 3-5, then rise to 130 by March 8, 160 by March 10, and peak around 200 on March 13. After that it is expected to decline to 120 around March 22. This is all based on the previous solar rotation, so new activity could increase these numbers with little warning. During that period geomagnetic conditions are expected to be unsettled around March 5 and 6, more so on March 11, and especially on March 16-18, about 28 days or one solar rotation since the last big disturbance.

Sunspot numbers for February 18 through 24 were 135, 122, 118, 103, 108, 38 and 56 with a mean of 97.1. The 10.7-cm flux was 168.1, 164.2, 157.1, 147.2, 129.7, 127 and 119.8, with a mean of 144.7, and estimated planetary A indices were 54, 38, 5, 5, 4, 7 and 11, with a mean of 17.7.

IN BRIEF:

* This weekend on the radio: The CQ WW 160-Meter SSB Contest, the REF French Contest (SSB), the UBA Contest (CW), the YL International QSO Party (SSB), the RSGB 7-MHz Contest, the CQC Winter QRP QSO Party, and the North Carolina QSO Party are the weekend of February 26-28 (see QST, Feb 1999, p 92 for more information). Just ahead: The ARRL International DX Contest (SSB),

March 6-7. See December QST, page 97, for details.

* Emergency request: Austrian Red Cross station, OE7XRK, has requested amateurs worldwide to keep clear 3685 and 7085 kHz for emergency relief operations. The request comes in the wake of avalanches in the Alps. In a packet posting February 25 on KITSAT-OSCAR 25, the Austrian Red Cross said those frequencies were being used to coordinate avalanche rescue and recovery operations.--thanks to HB9JOI and WB8IMY

* Vanity update: The FCC office in Gettysburg reports it has processed vanity call sign applications received through February 1. On February 23, the FCC granted 168 applications; another 164 landed in the work-in-process (WIPs) stack and have been processed.

* Contest Yearbook discontinued: The ARRL Contest Yearbook has been discontinued. Anyone needing contest rules, forms, or other information on ARRL-sponsored operating events can obtain them from ARRLWeb, http://www.arrl.org/contests/

* Riley Hollingsworth to do Dayton: The FCC's top Amateur Radio enforcer, Riley Hollingsworth, K4ZDH, will put in an appearance at this year's Dayton Hamvention. Hollingsworth is scheduled to address enforcement issues at FCC forums on Friday and Sunday at this year's event, scheduled for May 14-16. He'll also address the 3865 Drake and Antique Radio Tube Net Group forum Saturday morning (10:45-11:45 AM, Room 3), moderated by Don Spillman, W8NS. (Other speakers at the Drake forum include Sindre Torp, LA6OP, and Drake Service Manager Bill Frost, WD8DFP).--thanks to Steve Morgan, K8FFO

* More ham radio in the cinema? ARRL HQ was contacted by a research company reviewing a script for a new movie involving ham radio called Frequency. The film, starring Dennis Quaid, is about a young boy from New York who loses his father in a fire in 1969. Years later, the son is "reunited" with his late father via ham radio. While the story line may be a bit far-fetched for some, the movie may give Amateur Radio some additional positive exposure on the big screen. Bart Jahnke, W9JJ, helped Jennifer Hagy, N1TDY, to research a call sign--one that's not likely to be issued--that may be used in the movie. No more details on the movie or when it will be filmed are available at this time.--Jennifer Hagy, N1TDY

* Burundi (9U) contacts disallowed: The ARRL DXCC Desk says it's determined that documentation for operations from Burundi (9U) since 1994 was forged. After inquiries to DXCC about Amateur Radio operations from Burundi, the Director General of ONATEL, the communications authorities in Burundi, informed DXCC that the licenses were forgeries. The operators reportedly were expelled from the country, and the incident is under investigation by their employer. The DXCC Desk has since been rejecting cards for those operations. As soon as possible, all contacts from those operations will be purged from the DXCC database. This affects all operations since 1994 using a 9U prefix. DXCC notes that the submission of forged documentation is a clear violation of DXCC Section 1, Basic Rule 7, and also Rule 12(a).--DXCC Desk

* AMSAT-NA 30th anniversary party: AMSAT-NA will celebrate its 30th anniversary March 13 at the NASA/Goddard Employee's Recreation Center, Greenbelt, Maryland. The festivities are slated to begin at 6 PM, but there will be related activities throughout the weekend including tours of the Hubble Space Telescope Center and the NASA Communications Network. The cost to attend the anniversary dinner is $12 per person. No AMSAT funds will be used for this celebration. For reservations, contact AMSAT-NA, 301-589-6062, before March 5; e-mail martha@amsat.org.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit ARRLWeb at http://www.arrl.org.

The purpose of The ARRL Letter is to provide essential news of interest to active amateurs promptly and efficiently, and in advance of publication in our official journal, QST. The ARRL Letter strives to be fast, accurate, concise, and readable.

Material from The ARRL Letter may be reproduced in whole or in part in any form, including photoreproduction and electronic databases. Credit must be given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ.

To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site, http://www.arrl.org/members/. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. Registered members may visit the Member Data Page, under "What's available here?" on the Members Only Web Site, to change their selections. Click on "Modify membership data," check or uncheck the appropriate boxes, and click on "Submit modification" to make selections effective. E-mail delivery changes typically are effective immediately. (NOTE: Please do not ask individual HQ staff members to change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

Members Only registration also provides access to The ARRLWeb Extra, a news and feature magazine.

For members and nonmembers alike, The ARRL Letter also is available free of charge from these sources:

* ARRLWeb, http://www.arrl.org/arrlletter/. NOTE: The ARRL Letter will be posted each Friday as soon as possible after publication.

* The Netcom listserver operated by volunteers from the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list" to subscribe or "unsubscribe letter-list" to unsubscribe. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via the Netcom listserver.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published Fridays). For example, to request The ARRL Letter file for Friday, November 6, 1998, type "send ltr1106.txt". Then, on a separate line, type "quit". The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.

Nothing wrong with that attitude. But, hopefully, you do not advocate
using threat of force from the feds to stop the practice. What is
wrong with live and let live? (Same argument for Morse code testing).

Hey Marti Chittum,

You forgot one.....Prove it.

And btw, after your last post concerning my dead mother, I would think you could at least ACT like your human. Here is some of what Marty had to say:

" ..are you still waiting for that drunken old hag to check out so you can squat in her home and throw away the pittance she might leave behind."

"Just tell us where you plan to bury the senile gutter slut when she finally eats shit and dies."

Tell me Marty, what's your excuse for this and what you recently posted?

All I can say is this Mr. Blivitt....only the best went to NAM, How did you like that duty in JAPAN El Tee?

Dan/W4NTI and proud of it.

View the forward-looking infrared surveillance footage in the film
Waco: The Rules of Engagement and you'll discover exactly where
the bullets came from.

[...]
> Is it logical to think that a religious organization like the Branch
> Davidians who chose death over simply walking outside of thier compound
> were not capable of killing or doing harm?
>

We are all of us "capable of killing or doing harm." Watch the film,
view the surveillance footage, hear the calls to 911, and decide for
yourself if the Davidians posed a threat justifying a military-style
attack and execution without trial.

Several who did nothing more than "walk outside" were shot by the
secret police by the way. None "chose death."

[...]
> I believe the FBI/ATF wanted to inspect the compound because of the
> suspicion of illegal weapons etc.
[...]

The media were invited to the illegal and unjustified armed raid on
the totally innocent church members (invited by the BATF -- the FBI
initially had nothing to do with it), which makes it pretty obvious
what the agency was trying to do: make a big media splash to please
the forces within and without the government and convince them that
they're "on the job" dealing with "dangerous" people with
unvonventional views and guns, thus assuring continued or increased
funding/job security, et cetera.

Again, watch _Waco: The Rules of Engagement_ before making up your
mind. It contains no editorial commentary or narration, just
testimony from witnesses and archival footage.

I didn't and don't agree with the social, political, or religious
views of the Branch Davidian Church. But I'm horrified and outraged

by armed _de facto_ military attacks against innocent people who have never been convicted of a single crime.

And I'm appalled at the ease with which the American people can be made to hate, and approve of the murder of, those who are demonized by the mass media.

With all good wishes,

Kevin, WB4AIO.

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - MARCH 7, 1999

On March 7, 1999 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway
Lindenhurst, Long Island, NY

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $6.00.
Free Admission for spouses and children under 12.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Peter Portanova WB2OQQ at(516)541-4886. Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Why is Drew Durigan aka CBRAMBO so frustrated? Is it because he can't mix it up with the boys on 3.894.5 because he's only a Tech? He says Ham Radio is dead, but when the FCC grandfathers all the Techs to General, he'll be buying HF gear with dreams of getting on with the Stumpjumpers. "Hi, my name is Drew and I'm a Stumpjumper. Can I kiss Big Al's ass now?" HO HO!!!!!!

Never heard of it, but I had phenomenal results with Supermorse...
unfortunately it doesn't run so well on a pentium. NuMorse looks good,
though. It is shareware, no time-out, but slightly crippled. You have a 10
WPM speed cap until you register.

OK Joel:

Here are a couple of alternate PC acronyms (Used at Keesler AFB Tech schools 1956-1960).

Bad Booze Rots Our Young Guts but Vodka Goes Well.

and the most PC of all, generally used with WAF officers in the class:

Big Boys Race Our Young Girls But Violet Generally Wins.

From: brycelee@globalserve.net
Message-ID: <36d6088a.886246@news.globalserve.net>
Source record: 149606

I have a Yaesu FT - 530 handheld, purchased used earlier this year.
Two batteries were supplied.
The first labeled Yaesu ENB-25 7.2 V, 700 MAH manufactured by E.H.Yost & Company;
The second is MU-FNB-27 is a MAHA Ni-MH battery Pack, 12V DC, 900 mAH.

With both batteries, seemingly fully charged the radio performs well, for about the first hour or two. The readout on the FT allows one to monitor the voltage, and both batteries do read full voltage when charged.
Very suddenly, the voltage (and I'll use the 900 mAH battery as the example), the voltage drops to 9.0 volts then maybe ten minutes later drops to 5.2 volts. At this point the LCD display flashes indicating imminet shutdown.

The ENB-25 does the same thing although in a shorter time span.

I have noted previous discussions as to the viability of certain after-market batteries; could this be a problem? Incidentally the large battery was purchased new 18 months prior to my purchase of the radio although not here in Canada.
Now the strange thing.
If I then turn off the radio (with the flashing display) and remove either battery from the radio, and then replace the battery, the display returns to a 9.0 volt reading and maintains said voltage for say andother hour or more.

The contacts on the batteries and on the matching radio are clean and in good order.
The batteries have always been charged using a Yaesu NC-42 Quick Charger. I have also used the "slow" charger from Yaesu NC 28B

The question: is this normal for this type of battery?
If not what may be possible solutions?

Thanks, VA3 TRN

i also was looking at one but I changed my mind for a few reasons.:
1) they had a so-so review in QST on the
Pattcom PC-16000
2) the price of the PC-9000 including the options exceeds the price of a
Icom 706 mKII
which is now going for $950 at several Dealers.
3) the radio is single conversion.
4) the radio only puts out 40 watts

Good luck, Tim

"Doomsday" is a bit strong. I see it more as something to observe,
similar to observing a hurricane or lightning storm. I certainly
won't take any pleasure in seeing anyone get hurt, but there's an
air of excitement or anticipation associated with it.

I've got my fishing gear and my sailboat, and the ocean here is
teeming with tasty Mahi Mahi. Yum! No need to stock-pile food here.

To ANYONE with an idea !!!

I have posted this message with the hope that someone can help me. I have purchased an (ALAN / MIDLAND CT 79 / CT 79 E) I write it like this because I have searched the web for days now and CTE /ALAN / MIDLAND dont know who actually owns the radio as far as I can see.

I can access the following frequencies;
143.000-147.000
433.000-437.000

The specifications of the radio say

General
VHF 144.000-145.995
UHF 432.000-435.995

Transmit
VHF TX 118.000-165.000 (FM)
UHF TX 400.000-475.000

Recieve
VHF 100.000-173.000
UHF 350.000-469.950

Maybe it is just me but I cannot access any lower than 144!!! what is the problem?

Please help I need this frequency range for my work frequency 130.575.

From: Darvell <darvellhunt@my-dejanews.com>
Message-ID: <7b5cf9dkr1@nnrp1.dejanews.com>
Source record: 149619

Hi. I've got a MFJ-9420 SSB 20 meter rig that I've been trying to get on the air with, but my mobile antenna doesn't work well with it, apparently, as I can't seem to get out. (Low power, low antenna gain, wull duh!)

Can anybody suggest a good antenna to work with this radio that doesn't take up much space? I live in a house with almost no yard -- 4 to six feet on all sides. NOT a great HAM QTH!

Anyway, any suggestions? I'm thinking about a simple 20 m dipole, but I don't know if I have the space.

Thanks,
Darvell (N7LN)

4816. Cabal Unmasked: ARRL is California's Lap Dog

Newsgroup: rec.radio.amateur.misc
Date: 1999-02-27 00:00:00 UTC
From: mf_luder@my-dejanews.com
Message-ID: <7b9qos$407$1@nnrp1.dejanews.com>
Source record: 149370
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

ARRL is under the control of an elite, leftist, New World Order affiliated secret society whose actions are very public. The evidence is clear; W6ROD is a California liberal, the codefree license occcurred under him, posts like those of Jon Bloom show the liberal pro-gay, anti-conservative stance at ARRL is spreading like a cancer.

Enforcement actions are geared at California repeaters and Northeast HF "trouble-makers". This makes manifest the Californian's century old distrust of the Easterner.

Hollywood is spreading the Politically Correct party line to ARRL. Desperate for free national exposure, ARRL is embracing a P C vision of radio. First with "Contact" and now with the Quaid film, ARRL is worried that if it does not appear all-inclusive, Hollywood won't come calling for accuracy and the leftist appointed FCC won't do its bidding.

Depends on the city. The number of buildings, interference, etc. I'd
probably
try 50 Watts on 440 to start.

Here's how you do it. Go to the Hamtronics Web page, and purchase a
2 meter transmitter, at about 50 Watts. Then buy their 440 receiver. Now
all
you need is their cheapo repeater controller, and a Dual-Band antenna and
duplexor (Comet makes a good system), and you are done. Just buy a
dual-bander for the car. You'll need about 50 Watts to go 10 miles with
varying terrain.

As long as you use this for personal use, or for emergencies, then you are
fully compliant with the law. If you use this for business, then you are in
competition, and will be shut down.

>accessible for free.

You've gone off on a tangent here. #1 you want a telephone system that is
basically free (after purchasing the equipment). If we commercialize the

Ham bands and go into competition with capitalists and big business, we
will lose. The reason is, they will buy our frequencies, and we'll be done
as
a hobby. Hams do not have 1% the PAC power that the commercial people
have.

You don't need encryption for a hobby. Encryption means privacy, and
Ham radio is public. We accept such restrictions because it is a law.
Just like Freon and Crack Coccaine are laws. You can do whatever
you want, but as Grandpa asked: "are you willing to do the time, or
pay the fine?" I suspect it's cheaper to buy a scrambled cell phone.

>spectrum.

Wrong. They did. Before the FCC and regulations, radio operators just
set up shop and jammed each other. The Government was needed to
regulate and impose standards. Same with airplanes. Ask all the Rock
Stars, and Country Music stars who died in plane crashes, whether they
think regulations are bad? (if you can).

>restricted (no playing of wind instruments or blowing up balloons).

This reasoning is completely flawed. Here's what I propose. #1 You
decide if you want to persue a technical problem, or #2, a legal rights
problem. You are a child of the "Individual Rights" machine in America.
I'm from another Era, and that was "Community Rights." In my youth we
worried about what was good for "the people" and not what was
"good for me." Would having a free-for-all in the radio spectrum be
good for "the people" or even good "for me?"

Now, take your chosen thesis and develop it into a well reasoned essay
that is *against* what you believe should be the law.

Come back with the essay, and I will give you College Credit for anything
I feel is above C quality. it. It must be at least 2000 words, and have a
bibliography with at least five referenced works (Books, not magazines,
or newspapers, or internet). You should be able to do this in three or four
evenings at the Community College Library.

>I think if the FCC had its way, it would sell off the entire radio
>spectrum to big business. But (fortunately or unfortunately) many hams
>are retirees with lots of time on their hands to petition the FCC and
>lobby congress.

We exist at the benevolence of the ruling class. As the Ham population
dies off, Hams will be in no position to maintain the spectrum allocated.
Unless some plan is in the works, Ham radio as we know it, will pretty
much be dead above 50 MHz, by the next decade.

>They offer up decades-old stories of ham operators who
>were instrumental in emergency situations. So, large amounts of spectrum
>continue to be devoted to hams talking about little other than their
>equipment and what bullshit the no-code license is.

You can turn Ham radio into a big internet and telephone company, but it
will cost just as much as if you just paid for what is available now.
